## 1 GENERAL

This chapter contains disassembly procedures for the 1255/60. Generally speaking, the instruments can be re-assembled simply by reversing these procedures. Both instruments are designed such that access to the pcbs and other major components is straightforward. Cautionary notes are given where necessary.

## 2. PCB LOCATIONS

Pcbs for the 1255 and 1260 instruments are located as shown in Figs. 7.1 and 7.2 respectively.

**Fig. 7.1 1255 PCB Locations**

### 3.1 TOP COVER REMOVAL

Refer to Fig. 7.3

To remove the top cover:

1. Remove two rear corner screws 'A'
2. Remove two trim screws 'B' from each side trim and remove trims 'C'.
3. Lift off top cover.

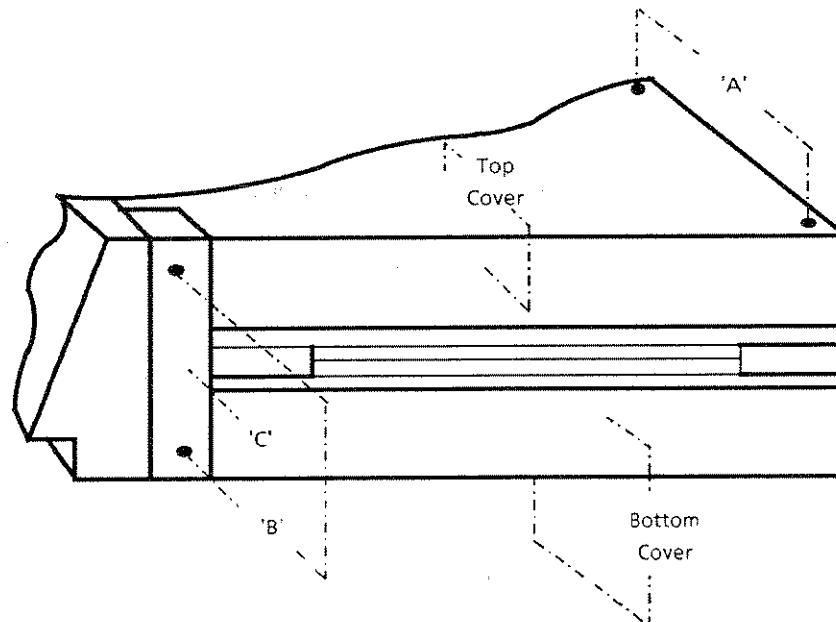

Fig. 7.3 Top Cover Removal

### 3.2 BOTTOM COVER REMOVAL

To remove the bottom cover:

1. Carefully invert the instrument.
2. Remove three fixing screws, one at each rear corner and one in the centre of the front edge.
3. Lift off bottom cover

#### 4.1 PCB 2, FRONT PANEL INTERFACE

Refer to Fig 7.5

To remove this board from the 1255 front panel assembly, first detach the front panel assembly (Sect. 3.3) then proceed as follows:

1. Remove the two screws 'E' securing the L.H. bracket and remove bracket.
2. Remove the seven nuts 'F', carefully lift the RFI screen a short distance from the pcb, then disconnect the 'beeper' before removing the screen fully

**During assembly re-connect the beeper before positioning the screen.  
Ensure also that the insulated side of the screen faces the pcb.**

3. Remove a further seven nuts and spacers, then lift the pcb clear of its mounting studs before disconnecting the ribbon cable to the membrain keyboard.

**The removal of pcb 2 will expose the display tube. Take care not to damage the vacuum seal which is normally protected by a detachable plastic cover...**

**Note.** To remove pcb 2 from the 1260, first remove pcb 31 as per Sect. 4.2.

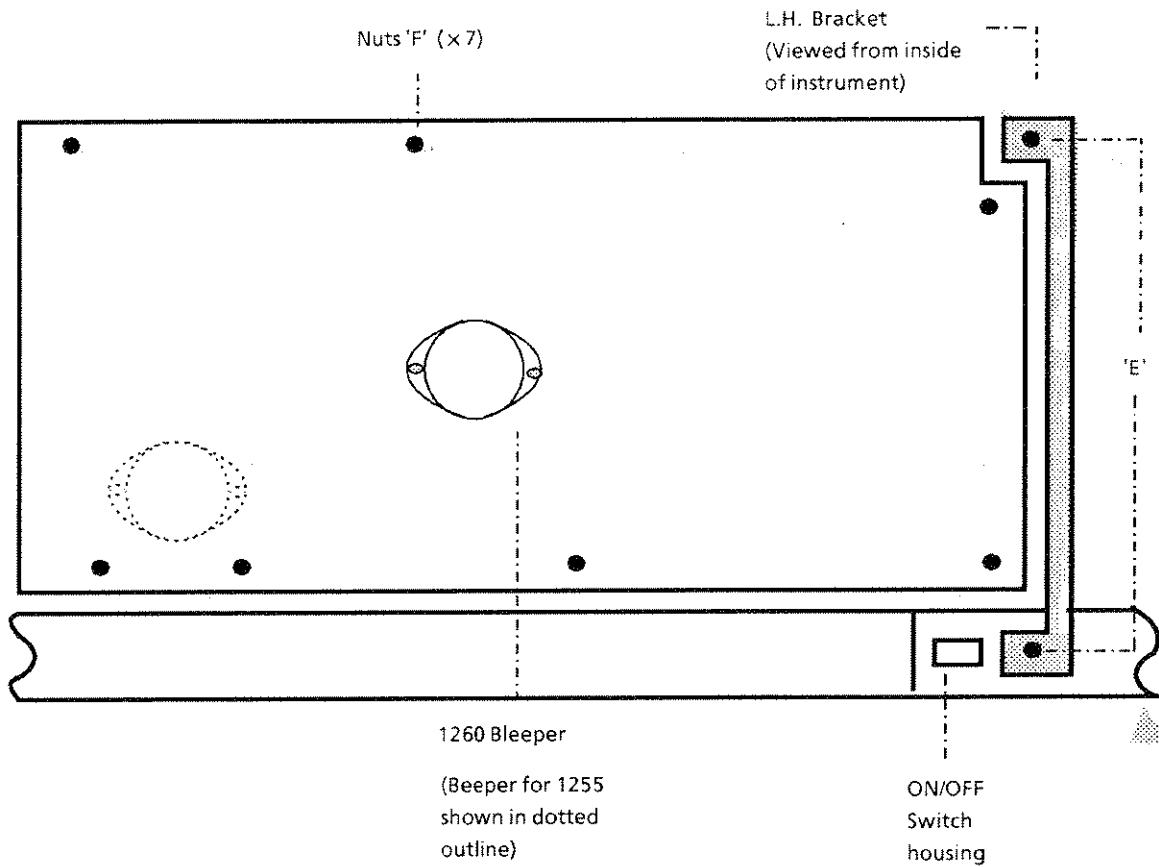

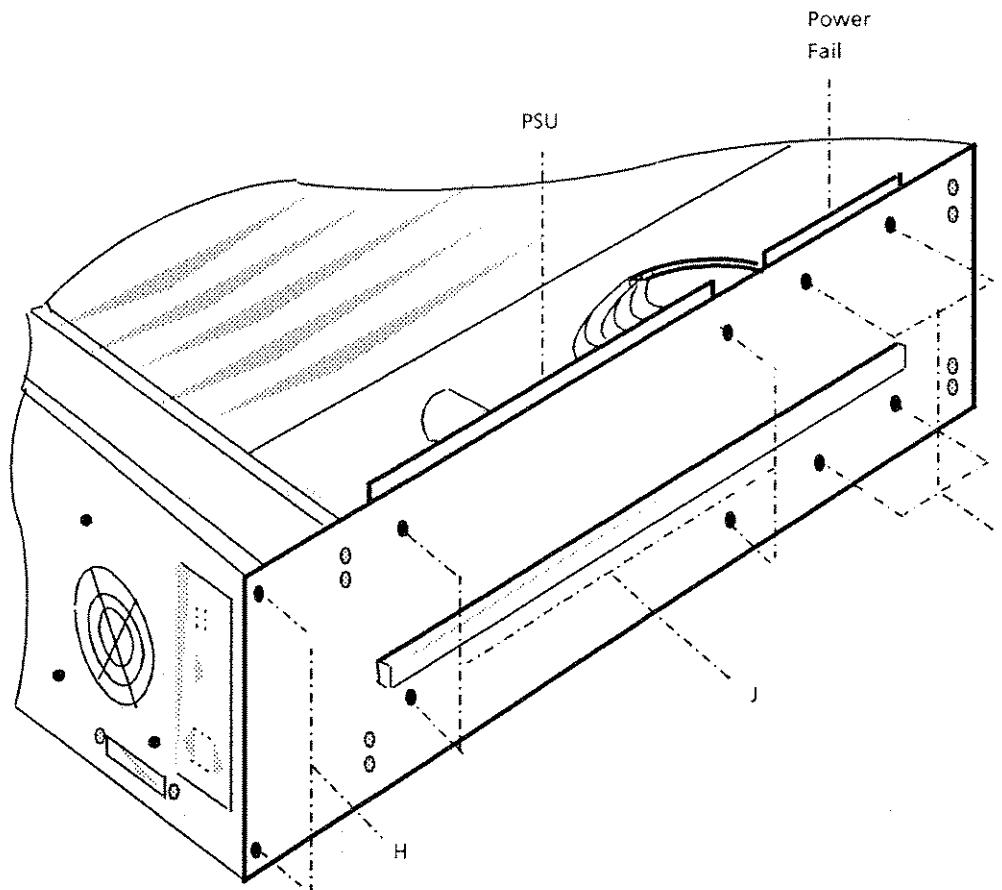

Fig 7.5 Removal of Front Panel Interface

#### 4.4 FAN REMOVAL

To remove the fan:

1. Remove top and bottom covers, as described in Sections 3.1 and 3.2.
2. Remove, from either side, the two screws labelled 'H' in Fig. 7.7
3. Pull the rear panel clear to access the three nuts securing the fan.
4. Remove the nuts and lift the fan clear.

*Fig 7.7 Component Removal/Wiring*

#### 4.5 PCB 5 (POWER FAIL) REMOVAL

To remove PCB 5 it will first be necessary to remove top and bottom covers as described in Sections 3.1 and 3.2.

Board 5 is fixed to the left-hand side panel, just in front of the power supply unit. The PCB is supported on six stand-offs. These have spring barbs which can be squeezed to allow the PCB to be slipped over for removal.

A more convenient method may be to remove the four screws labelled 'T' in Fig 7.7, then slip the PCB off the two centre stand-offs by squeezing the barbs. (Hold the stand-off bodies to prevent them turning),

**4.6 POWER SUPPLY REMOVAL**

The power supply is mounted on the left-hand side panel of the instrument.

To remove the power supply:

1. Remove both halves of the cover, as described in Sections 1 and 4.
2. Remove the four screws labelled 'J' in Fig 7.7.
3. Disconnect the supply leads and lift the power supply module clear.

The mains wiring details are shown in Fig 7.8. There are also six output leads from the "FASTON" terminals to the motherboard. These six connections are clearly identified, both at source and destination. Note that there is no connection to the -5V terminal.

**4.7 THE MOTHERBOARD**

To remove the motherboard:

1. Remove both halves of the cover, as described in Sections 3.1 and 3.2.
2. Detach the front panel assembly, as described in Section 3.3.
3. Disconnect the fly-leads from the "FASTON" terminals on the motherboard.
4. Turn the unit upside-down and remove the twenty-two fixing screws, plus two more which secure the lower cover front screw mounting plate.
5. Remove the motherboard from the instrument.

## 1 GENERAL

This chapter contains disassembly procedures for the 1255/60. Generally speaking, the instruments can be re-assembled simply by reversing these procedures. Both instruments are designed such that access to the pcbs and other major components is straightforward. Cautionary notes are given where necessary.

## 2. PCB LOCATIONS

Pcbs for the 1255 and 1260 instruments are located as shown in Figs. 7.1 and 7.2 respectively.

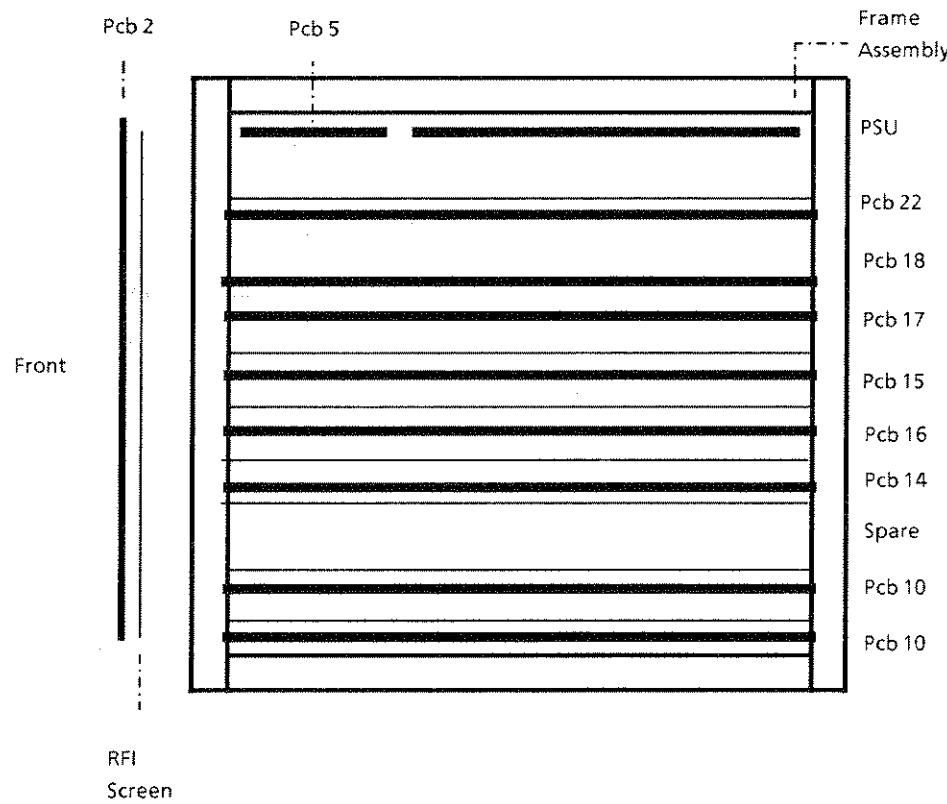

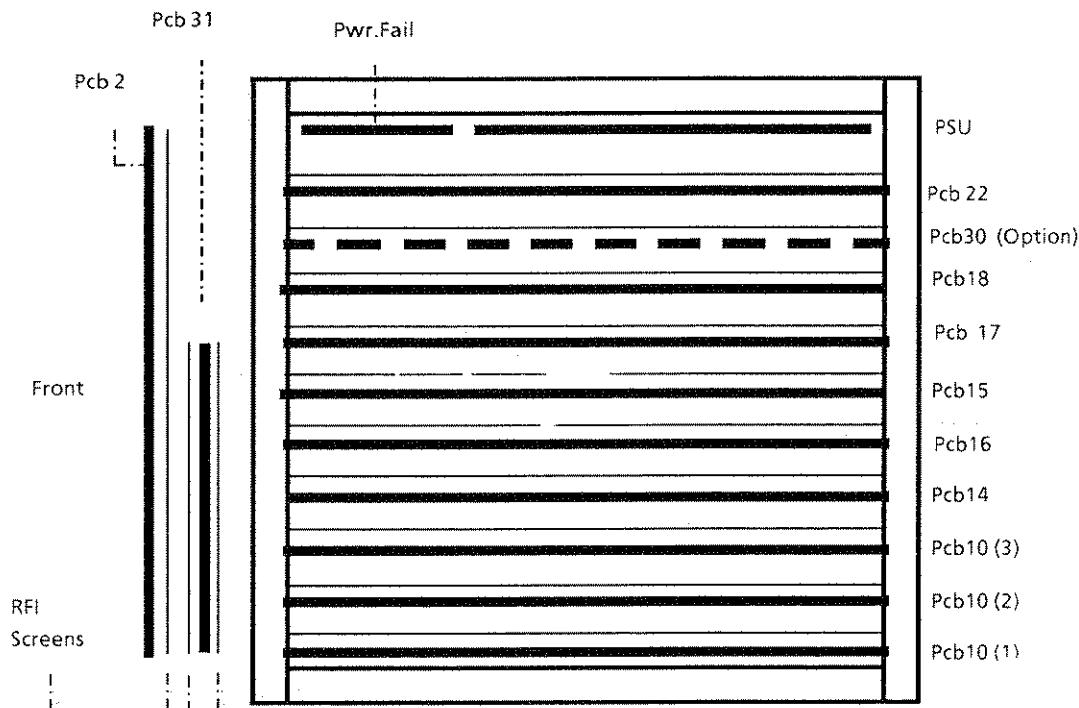

Fig. 7.1 1255 PCB Locations

**Fig. 7.2 1260 PCB Locations**

### 3 ACCESS TO PCBs AND COMPONENTS

To gain access to PCBs and other components, it will be necessary to remove the instrument trims and covers (Sections 3.1 to 3.2 refer). Removing only the top cover will allow access to most PCBs. To remove the motherboard and the power supply unit (PSU) the bottom cover must also be removed. With 1255, the display board (Pcb 2) can be removed once the front panel assembly has been detached (Section 3.3 refers). On the 1260, it will be necessary to first remove Pcb 31 before attempting to remove Pcb 2. The removal of Pcb 31 is described in Section 4.2.

### 3.1 TOP COVER REMOVAL

Refer to Fig. 7.3

To remove the top cover:

1. Remove two rear corner screws 'A'
2. Remove two trim screws 'B' from each side trim and remove trims 'C'.
3. Lift off top cover.

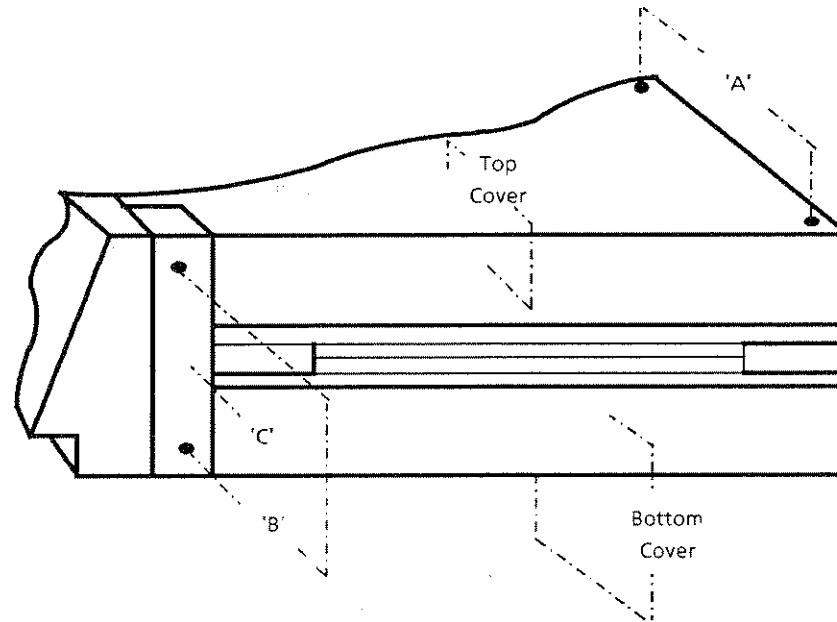

Fig. 7.3 Top Cover Removal

### 3.2 BOTTOM COVER REMOVAL

To remove the bottom cover:

1. Carefully invert the instrument.
2. Remove three fixing screws, one at each rear corner and one in the centre of the front edge.
3. Lift off bottom cover

### 3.3 DETACHING FRONT PANEL ASSEMBLY

Refer to Fig. 7.4.

With the top cover removed (Sect.3.1):

1. Remove screws 'D' from both sides of the instrument.
2. Withdraw the complete front panel assembly from the main body of the instrument.
3. To remove the assembly completely, unplug the cable from the DIL socket then disconnect the five fly-leads (seven for 1260) noting the terminals from which they were disconnected (Refer to the Note in Sect. 4).

**Take care not to damage the ON/OFF switch arm which is exposed when the front panel assembly is removed.**

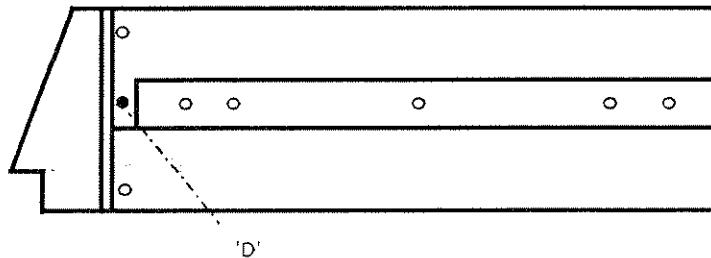

Fig 7.4 Removal of Front Panel Assembly

### 4. PCB REMOVAL

Once the top cover has been removed, most pcbs within the frame assembly can be unplugged from the instrument motherboard simply by raising the two plastic ejector levers on the pcb top edges. First, disconnect any board-to-board fly leads. Sub miniature connectors (SMCs) from pcb 10 (V Hi/Lo) and pcb 16 (Gen. output) to the front panel must also be disconnected before removing these boards.

To ensure correct connections on re-assembly, note carefully the source and destination of each of these cables before disconnecting, paying special regard to pcb 10. With the pcbs in situ, the uppermost leads are the Hi input and the lower leads the Lo input. These should be mated with corresponding channel connectors on the front panel. By convention, the outermost board 10 within the frame assembly, is designated channel 1, the next channel 2, and so on.

#### 4.1 PCB 2, FRONT PANEL INTERFACE

Refer to Fig 7.5

To remove this board from the 1255 front panel assembly, first detach the front panel assembly (Sect. 3.3) then proceed as follows:

1. Remove the two screws 'E' securing the L.H. bracket and remove bracket.
2. Remove the seven nuts 'F', carefully lift the RFI screen a short distance from the pcb, then disconnect the 'beeper' before removing the screen fully

**During assembly re-connect the beeper before positioning the screen. Ensure also that the insulated side of the screen faces the pcb.**

3. Remove a further seven nuts and spacers, then lift the pcb clear of its mounting studs before disconnecting the ribbon cable to the membrain keyboard.

**The removal of pcb 2 will expose the display tube. Take care not to damage the vacuum seal which is normally protected by a detachable plastic cover...**

**Note.** To remove pcb 2 from the 1260, first remove pcb 31 as per Sect. 4.2.

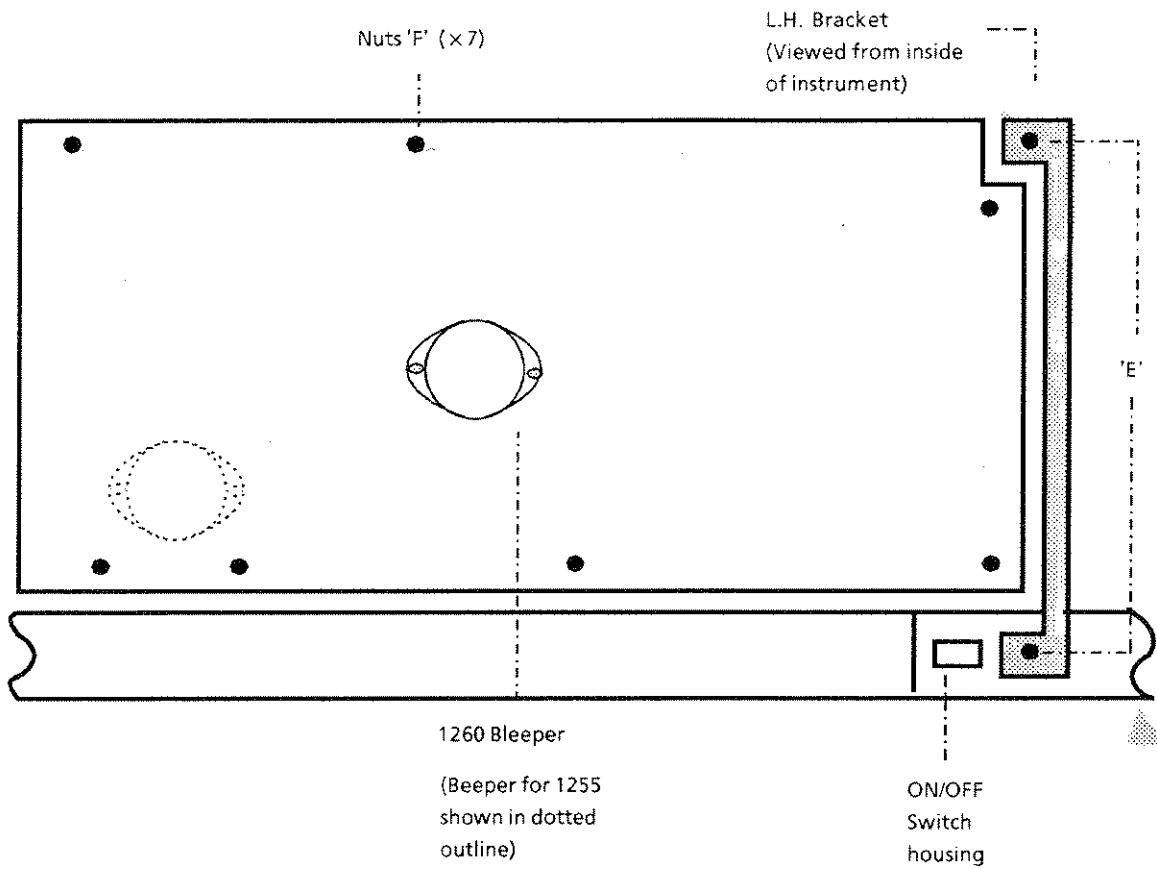

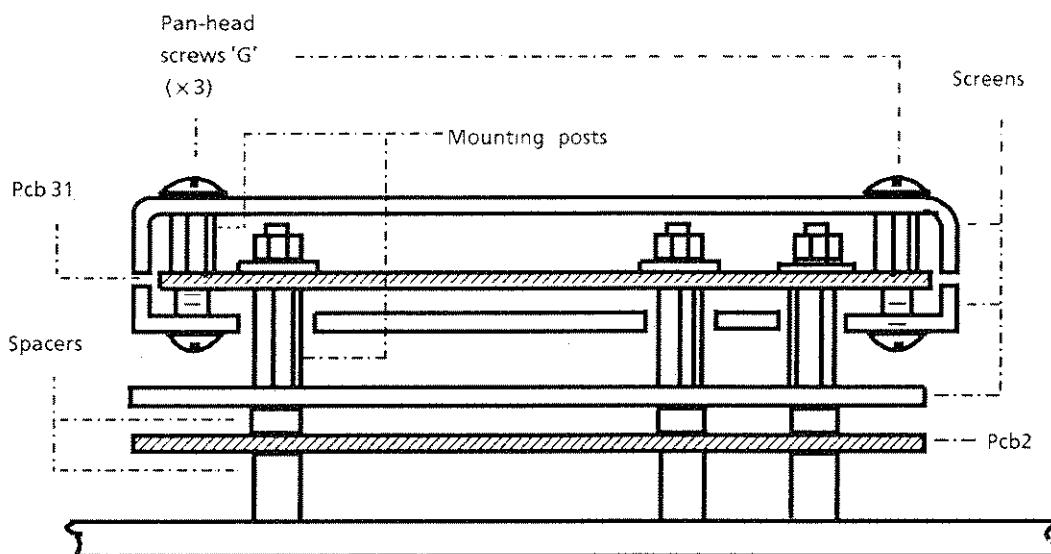

Fig 7.5 Removal of Front Panel Interface

#### 4.2 PCB 31, CURRENT-TO-VOLTAGE CONVERTER (1260)

Refer to Fig. 7.6

To remove pcb 31 from the 1260 front panel assembly:

1. Disconnect the sub-miniature connection (SMC) at the front panel assembly, to board 10.
2. Disconnect both the 2-pin twisted pair and the 4-way Amphenol connectors to board 15.
3. Remove the 3 pan-head screws 'G', securing the top RFI screen on pcb 31 and remove the screen.
4. Remove 4 nuts and washers holding the pcb and bottom RFI screen to the support posts.
5. Remove 3 pan-head screws securing bottom screen to pcb 2 and remove pcb.

**Fig 7.6 Pcb's 2 and 31 on Front Panel Assembly.**

#### 4.3 MEMBRANE SWITCH PANEL

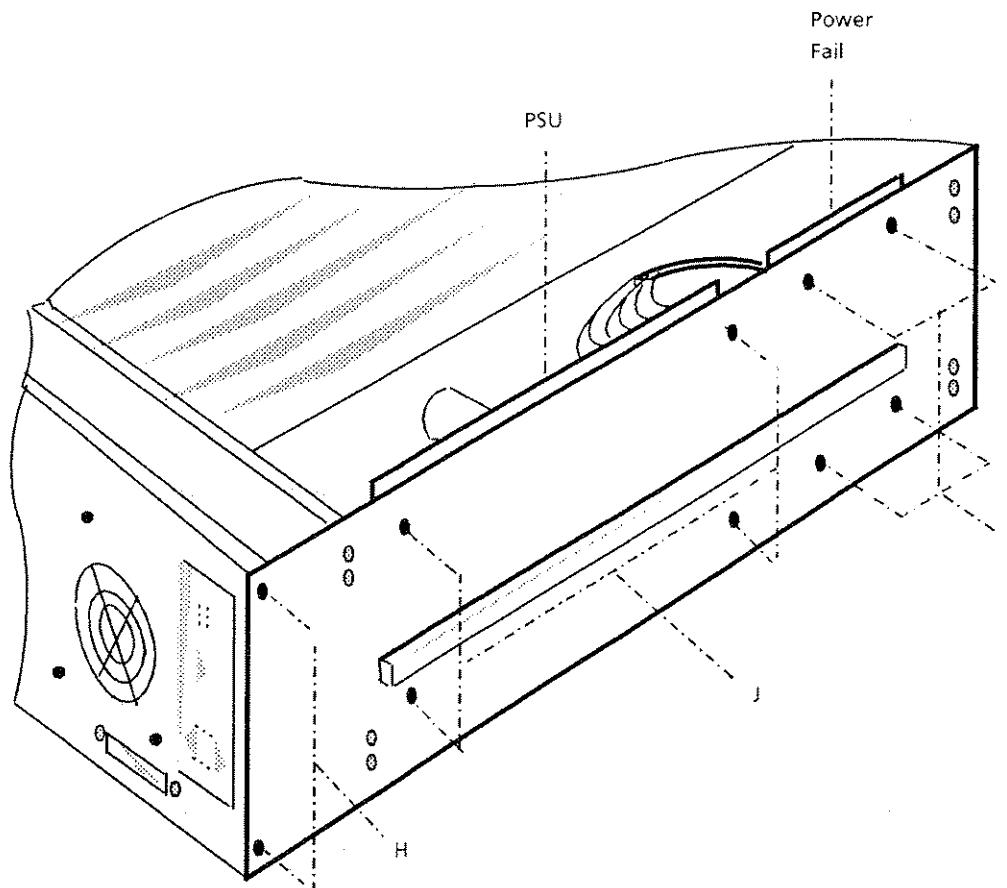

To remove the membrane switch panel from the front panel assembly:

1. Remove pcb 2 (31 and 2 for 1260) as described in Sect. 4.1 (4.2 and 4.1)
2. Remove the 8 nuts which connect the membrane switch panel to the front moulding.
3. Withdraw the switch panel, complete with studs and BNC connectors, from the front of the assembly.

#### 4.4 FAN REMOVAL

To remove the fan:

1. Remove top and bottom covers, as described in Sections 3.1 and 3.2.
2. Remove, from either side, the two screws labelled 'H' in Fig. 7.7
3. Pull the rear panel clear to access the three nuts securing the fan.
4. Remove the nuts and lift the fan clear.

*Fig 7.7 Component Removal/Wiring*

#### 4.5 PCB 5 (POWER FAIL) REMOVAL

To remove pcb 5 it will first be necessary to remove top and bottom covers as described in Sections 3.1 and 3.2.

Board 5 is fixed to the left-hand side panel, just in front of the power supply unit. The pcb is supported on six stand-offs. These have spring barbs which can be squeezed to allow the pcb to be slipped over for removal.

A more convenient method may be to remove the four screws labelled 'T' in Fig 7.7, then slip the pcb off the two centre stand-offs by squeezing the barbs. (Hold the stand-off bodies to prevent them turning),

Disconnect the board and lift it clear. The wiring connections to the Power Fail pcb are shown in Fig 7.8.

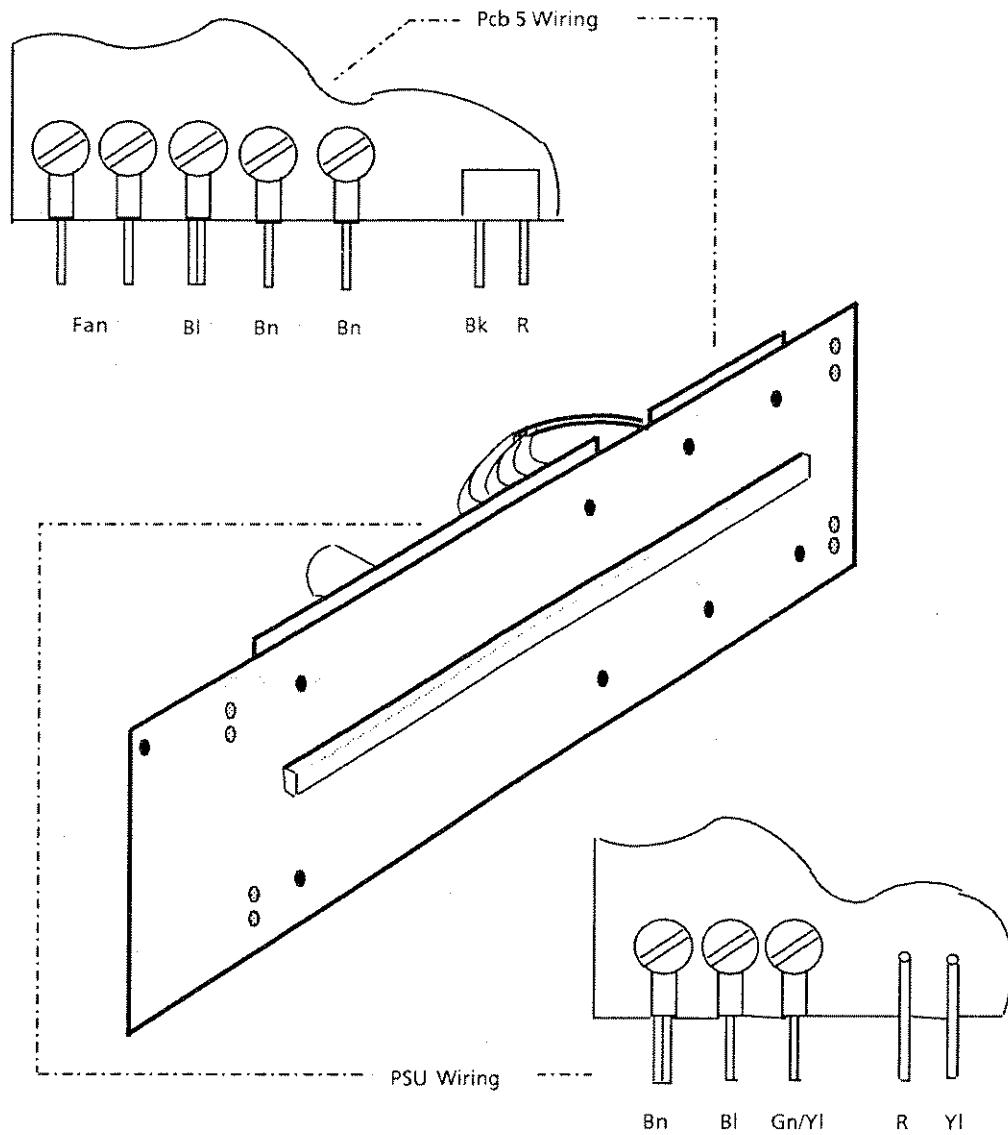

Fig 7.8 Component Wiring

#### 4.6 POWER SUPPLY REMOVAL

The power supply is mounted on the left-hand side panel of the instrument.

To remove the power supply:

1. Remove both halves of the cover, as described in Sections 1 and 4.
2. Remove the four screws labelled 'J' in Fig 7.7.
3. Disconnect the supply leads and lift the power supply module clear.

The mains wiring details are shown in Fig 7.8. There are also six output leads from the "FASTON" terminals to the motherboard. These six connections are clearly identified, both at source and destination. Note that there is no connection to the -5V terminal.

#### 4.7 THE MOTHERBOARD

To remove the motherboard:

1. Remove both halves of the cover, as described in Sections 3.1 and 3.2.
2. Detach the front panel assembly, as described in Section 3.3.
3. Disconnect the fly-leads from the "FASTON" terminals on the motherboard.
4. Turn the unit upside-down and remove the twenty-two fixing screws, plus two more which secure the lower cover front screw mounting plate.
5. Remove the motherboard from the instrument.

## 1 INTRODUCTION

This chapter contains parts lists for each of the 1255/60 printed circuit boards. The pcbs are listed in numerical order and pcb components, in alphabetical order. When ordering spare parts, it is essential to quote the instrument serial number located on the rear panel, as well as the full description of the item given in the appropriate parts list. Abbreviations used in the parts lists are given in the table below.

### COMPONENT PARTS LIST ABBREVIATIONS

#### CIRCUIT REFERENCES

AE	Aerial	PL	PLug
B	Battery	R	Resistor ( $\Omega$ )
C	Capacitor ( $\mu F$ )	RE	Recording Instrument
CSR	Controlled Silicon Rectifier (thyristor)	RL	Relay
CV	Capacitor, Variable ( $\mu F$ )	RNL	Resistor, Non-linear ( $\Omega$ )
D	Diode	RP	Resistor Pack ( $\Omega$ )
FS	Fuse	RV	Resistor, Variable ( $\Omega$ )
HS	Heatsink	S	Switch
IC	Integrated Circuit	SK	Socket
JP	Jumper	T	Transformer
L	Inductor	TP	Test Point (or Terminal Post)
LK	Link	TR	Transistor
ME	Meter	V	Valve
MSP	Mains Selector Panel	ZD	Zener Diode

#### COMPONENT TYPES

##### Fixed Resistors

CACP	Carbon Composition
CAFM	Carbon Film
CKCA	Cracked Carbon
MEFM	Metal Film
MEGL	Metal Glaze
MEOX	Metal Oxide
PF	Precision Fixed
POWW	Power, Wirewound
PRWW	Precision, Wirewound
TEMP	Temperature Sensitive
TKFM	Thick Film
TNFM	Thin Film
VOLT	Voltage Sensitive

##### Variable Resistors

CAFM	Carbon, Front Panel, Multiturn
CAFS	Carbon, Front Panel, Single Turn
CAPM	Carbon, Preset, Multiturn
CAPS	Carbon, Preset, Single Turn
CMFM	Cermet, Front Panel, Multiturn
CMFS	Cermet, Front Panel, Single Turn
CMPM	Cermet, Preset, Multiturn
CMPS	Cermet, Preset, Single Turn
WWFM	Wirewound, Front Panel, Multiturn
WWFS	Wirewound, Front Panel, Single Turn
WWPM	Wirewound, Preset, Multiturn
WWPS	Wirewound, Preset, Single Turn

##### Capacitors

AIR	Air
ALME	Aluminium Electrolytic
ALMS	Aluminium Solid
CARB	Polycarbonate
CERM	Ceramic
ESTF	Polyester Foil
ESTM	Polyester, Metallised
GLAS	Glass
MICA	Mica

MLAC	Metallised Lacquer
PAPF	Paper Foil
PAPM	Paper Metallised
PTFE	Polytetrafluoroethylene
PYLN	Polypropylene Film
STYR	Polystyrene
TAND	Tantalum, Dry
TANF	Tantalum Foil
TANW	Tantalum, Wet

# Chapter 10

## Fault Diagnosis

---

<i>Section</i>	<i>Page</i>
1 INTRODUCTION	10.3
2 FAULT DIAGNOSIS	10.3
2.1 Blank Display	10.3
2.2 Self-test Failure	10.3
2.3 Analog Failure	

## 1 INTRODUCTION

This chapter contains fault-finding procedures to pcb level.

It is assumed that the top cover of the instrument has been removed (as per Chapter 7) in order to gain access to the boards.

**Note the safety precautions given in Chapter 1.**

## 2 FAULT FINDING

### 2.1 BLANK DISPLAY

If at switch-on the display appears blank, suspect the line fuse, or the dc supplies and fuses. If the supplies are satisfactory, suspect either the Display Board (Pcb 2) the Processor Board Pcb 22, or (if fitted) the Power Fail Detect Board, Pcb 5.

### 2.2 SELF-TEST FAILURE

The self-test procedure checks out the logic circuitry of the instrument. In the event of a failure, it may be difficult to identify the cause precisely due to the interconnections between PCBs. The self-test indications therefore provide only a guide. Usually, a self-test failure indicates a fault on either Pcb 22, Pcb 17 or Pcb 18. (Refer to the section on self-test in the Operating Manual)

If the self-test procedure will not initiate, the Main Processor Board (Pcb 22) may be faulty. First check that the LEDs on the PCB are flashing. If these are operating satisfactorily, check the state of pin 37 on IC1. A Lo on this pin will indicate that Pcb 5 is faulty, similarly, a Hi will indicate that the fault may be on the Display Board (Pcb 2).

### 2.3 ANALOG FAILURE

The self-test procedure will not reveal an analog failure. This type of failure will be reflected in the displayed results. To diagnose an analog fault, proceed as follows:

- a. On Pcb 22, set switches SW1 and SW6 to the down (CAL disabled) position.
- b. Select INITIALIZE from the self-test menu.
- c. Enter a bias value of 10V from the GENERATOR menu.
- d. Press SINGLE and check the generator output.

Q. Is + 10V present?

YES Go to step e.

NO On Pcb 15, measure the voltage of TP 5 wrt TP1.

Q. Is + 1.2V present?

YES Fault on Pcb 14, power amplifier (Sheets 4 and 5) or LF section (Sheet 2).

NO Fault on Pcb 15

- e. From GENERATOR menu, set bias to zero and amplitude to 3V.

Q. Is there an undistorted sinewave of 3V amplitude at the Generator output?

YES LF section is satisfactory - go to step f.  
NO On Pcb 15, measure TP4 wrt TP1.

Q. Is an undistorted sinewave of amplitude 3Vrms present?

YES Fault on board 14, LF section (Sheet 2) or power amplifier (Sheets 4 and 5)

NO On Pcb 15, check IC 203, pin 15.

Q. Is an undistorted sinewave of amplitude 5V present?

YES Fault in IC 203 (Amp DAC) area.  
NO Fault on Pcb 15

f. From the GENERATOR menu, enter a frequency of 3kHz.

Q. Is there an undistorted sinewave of amplitude 3Vrms at the Generator output?

YES Repeat step f. for frequencies of 10kHz and 65kHz.  
NO Repeat step e.

On the completion of step f., tests on the three frequency ranges of Pcb 15 and 18 are complete.

g. From the GENERATOR menu, enter a frequency of 66kHz and 1Vrms.

Q. Is there an undistorted sinewave of amplitude 1Vrms at the Generator output?

YES Go to step h.  
NO On Pcb 14, check the output of IC704, pin 10.

Q. Is there an undistorted sinewave of frequency 66kHz and amplitude 330mVrms present?

YES Pcb 14, HF section faulty (Sheet 3).  
NO Pcb 16 faulty, or Pcb 14 (Sheet 7). - See next Q.

Q. Is there 560mVrms (from Pcb 16 into Pcb 14) at the junction of R701 / SK701 (Pcb 14, Sheet 7).

YES Pcb 16 satisfactory.  
NO Suspect PCB 16.

h. From the GENERATOR menu, enter a frequency of 1MHz

Q. Is there an undistorted sinewave of approximately 1Vrms at the generator output?

YES Repeat step h. using frequencies of 10MHz and 20MHz respectively.  
NO Repeat step g.

When steps a. through h. are completed, the generator synthesizer sections of Pcb 15, 16 and 18 will have been tested

- i. From the SELF-TEST menu, select INITIALIZE.
- j. Connect the generator output to the INPUT V1 (VOLTAGE 1) HI input.
- k. From the GENERATOR menu, enter a frequency of 250Hz and an amplitude of 1V.
- l. Press RECYCLE.

Q. Is the LED on Pcb 17 flashing?

- YES Go to step m.  
NO Fault on Pcb 15,17 or 18.

- m. From the DISPLAY menu, enter INPUT V1 (VOLTAGE 1) as the source and R, $\theta$  as the co-ordinates..

Q. Does the display read 1V, 0 deg.?

- YES Go to step n.  
NO Fault on Pcb 10 or 17. Try Channel 2.

- n. From the GENERATOR menu, enter a frequency of 3kHz.

Q. Does the display read 1V, 0 deg.?

- YES Repeat step n. but with frequencies of 10kHz and 65kHz.  
NO F/HET signal missing or at incorrect frequency. Fault may be on  
Pcbs 16, 17 or 18.

The satisfactory completion of tests i. through n. will confirm the status of the digital heterodyne circuit.

- o. From the GENERATOR menu, enter a frequency of 66kHz.

Q. Does the display read 1V, with an arbitrary phase angle (0 through 360 degrees)?

- YES Repeat tests i. through o. for the INPUT V2 (VOLTAGE V2) input.  
NO Fault on Pcb 17, Pcb 18, or channels 1 and 2. Check signal at TP402  
on Pcb 10 is approximately 5.5Vpp at 400Hz. If frequency is  
incorrect, suspect heterodyne drive from Pcb 16.

#### 1260 Only:

- p. Press RECYCLE.

Q. Does the display read 20mA at an arbitrary phase angle?

- YES Repeat steps n. through o.  
NO Pcb 10 faulty.

- q. Disconnect Pcb 31 from the third Pcb 10 input and connect V1 input cable to  
third Pcb 10. Repeat tests i. through o. with the current input channel on the  
60mA range.

Q. Does the display read 20mA?

YES Go to next test.  
NO Fault on Pcb 17 or Channel 3.

- r. Isolate Pcb 31 from Pcb 10 by disconnecting SK102. Connect the generator output to the front panel current input and set the generator to : 300Hz , 20mA, Display I, and R0.

Q. Is the output of Pcb 31 at SK102, 1V at 300Hz?

YES Reconnect SK102 (Pcb 31 to Pcb 10).  
NO Pcb 31 faulty.
