## PT8100

## SERVICE MANUAL <br> VHF /UHF MOBILE RADIO

## Dangerous！

Do not connect the AC power or DC power over 18 V with any connector or terminal of the radio．Otherwise it will cause fire，electric shock or damage to the radio．

## Warning

Do not reverse power connection．
Do not turn on the radio before the antenna or load connection is completed．

Do not touch the antenna while the radio is transmitting， otherwise，it may cause light burning on skin．

The radio is not waterproof，so it＇s better to avoid putting it in rain or snow，or any other liquid to ensure its life and performance．

## Chapter 1 Overview

### 1.1 Introduction

This manual applies to the service and maintenance of PT8100 mobile radios, and is intended for use by engineers and professional technicians that have been trained by Kirisun. It contains all required service information for the equipment. Kirisun reserves the right to modify the product structure and specifications without notice in order to enhance product performance and quality. You can also $\log$ on our website www.kirisun.com to download the latest service manual or contact your local dealer or us.

Please read this manual before repairing the product.

### 1.2 Service Attentions

## * Safety

Do not touch the antenna connector while repairing the radio.
Do not reverse the battery polarity.
Do not turn on the radio before the antenna or load connection is completed.

Do not touch the antenna while the mobile radio is transmitting, otherwise, it may cause light burning on skin.

## * Explosive Atmosphere

It's prohibited to use or repair the radio in the following places:

Hospital, health center, airport
Any area with a potentially explosive atmosphere (e.g. orlop deck of the ship, storage or transportation equipment for fuel and chemical etc.)

Any place near blasting sites or area with electrical blasting cap.

## * Replacement Parts

All components used for repair should be supplied by Kirisun.

Components of the same type available on the market are not surely able to be used in this product and we do not guarantee the quality of the product using such components.

If you want to apply for any component from Kirisun, please fill in an application form as below. e.g.

| Radio <br> Model | Component | Position <br> Mark | Model/ <br> Specifications | Part No. | Qty |
| :--- | :--- | :--- | :--- | :--- | :--- |
| PT8100-01 | FET | Q18 | 3SK318 | 105-3SK318-R01 | 1 |
| PT8100-01 | Triode | Q5 | 2SC3357 | 104-SC3357-R01 | 1 |

### 1.3 Service

All the Kirisun products are subject to the service warranty.
After-sales service will be provided, and the length of warranty is stated by Kirisun. The radio and its accessories are all in the warranty. However, in one of the following cases, charge free service will be not available.

* No valid warranty card or original invoice.
* Malfunction caused by disassembling, repairing or reconstructing the radio by the users without permission.
* Wear and tear or any man-made damage such as mechanical damage, burning or water leaking.
* Product's serial number has been damaged or the product trademark is difficult to identify.

After the warranty expires, lifetime service is still available. We also provide service components to service stations and staffs.

## Chapter 2 Unpacking and Checking

### 2.1 Unpacking and Checking

Unpack the radio carefully. We recommend that you check the radio and the supplied accessories listed in the following table before discarding the packing material. If any damage or loss has occurred during shipment, please contact the dealer without delay.

| No. | Item | Qty |
| :---: | :--- | :--- |
| 1 | Mounting Bracket | 1 |
| 2 | Power Cable | 1 |
| 3 | Hand Microphone | 1 |
| 4 | Microphone Hanger | 1 |
| 5 | M4*10 SEMS Screw | 4 |
| 6 | M4*16 Self-tapping Screw | 2 |
| 7 | M5*16 Self-tapping Screw | 4 |
| 8 | Instruction Manual | 1 |

|  |  | Power Cable |
| :---: | :---: | :---: |

### 2.2 Licenses

It is requested by rules that each radio installation site (for mobile station or base station) should be provided with a license. The license carrier should guarantee that the Tx power, frequency and deviation comply with the license requirements Transmission adjustment can only be conducted by license-authorized technicians. Installation or operation of the radio does not need a license.

### 2.3 Check before Installation

Every radio has been adjusted and checked before shipment.
Before installation, it's better to check if the radio's transmission and receiving are normal to make sure its proper operation.

The test should be performed with all cables and accessories correctly connected.

Tx frequency, deviation, and power output should be checked, as should Rx sensitivity, squelch, audio output, and signaling operation.

### 2.4 Installation

1) Preparation

Check the vehicle and decide how and where to install the radio antenna and accessories. Make sure that the cable will not be extruded. And pay attention to the heat dissipation of the radio to avoid overheating.
2) Antenna

The best position for the antenna is in the center of an open and flat conduction region, usually the center of the vehicle roof or the cover of the luggage trunk. Connect one end of the earth wire to the cover of the luggage trunk and the other end to the car outer shell so that the cover of the luggage trunk is grounded.
3) Connection of Power Cable

* First of all, please check whether there is a hole for the power cable on the insulating board. If no, please bore the board with a suitable drill bit and fix a rubber grommet on it to protect the cable from abrasion.
* Afterwards, please pass the cable through the insulating board and lead from the car into the engine room. Connect the red conductor to the positive terminal of the accumulator and the black conductor to the negative terminal.
* At last, ring the remained conductor and fix it.

Note: Please guarantee sufficient relaxation of the power cable in the car so that the radio can be conveniently disassembled, assembled, and repaired in the state of power connection.
4) Installation

Warning: For passenger safety, please install the radio securely using the supplied mounting bracket so that the radio will not be loosened in case of collision.

* Take the mounting bracket as the sample to draw the position of the four holes for screws. Then drill the holes on the instrument panel, and then install the mounting bracket with $4 \mathrm{M} 5 * 16$ self-tapping screws. (Note: Please install the radio at a position convenient for operation, and leave enough space for connection of the cable.)
* Slide the radio into the mounting bracket and fix it to the bracket with 4 M4* 10 SEMS screws (with flat washer and spring washer). (Set an appropriate height and angle for the radio by using different screw holes of the bracket.)
* Connect the antenna and the power cable to the radio.
* Install the microphone hanger at an appropriate position using 2 M4* 16 self-tapping screws. (It should be made sure that the microphone and its cable will not affect safe driving.)
* Connect the microphone to the MIC jack on the front panel of the radio and put the microphone on the hanger.

Note: When replacing the fuse of the power cable, only use fuses of the same type and rating; otherwise the radio could be damaged.

## 5) Attention

If you have no plan to use external speaker, please cover the speaker jack with the supplied rubber plug to prevent dust and sand getting in.

## Chapter 3 External View and Functional Keys

### 3.1 Front Panel

$\begin{array}{llllll}\text { (5) } & 6 & (7) & 8 & 9 & 1\end{array}$
(1) (1) Power Button

Press and hold this button ( 1.5 seconds or longer) to turn the radio power ON or OFF.

## (2) LED Indicator

Lights red while the radio is transmitting, lights green while the radio is receiving.

Flashes orange while receiving DTMF, 2Tone or 5Tone signals the same as the setting of the radio.

Flashes red while the radio is scanning (This function can be
enabled/disabled by PC software).

## (3) LCD Display

Refer to "LCD Display Screen" for details.
(4) Volume Knob

Adjust volume of the mobile radio.
(5) MIC Jack/Programming Interface
(6) P1 Button (Programmable Button)
(7) P2 Button (Programmable Button)
(8) P3 Button (Programmable Button)
(9)
(9)Button (Programmable Button)

### 3.2 Microphone

(10) PTT Button (on the hand microphone)

Press and hold the PTT button, then speak into the microphone, your voice can be transmitted to the recipient.
Release PTT to receive.

### 3.3 LCD Display Screen

| Display | Description |
| :--- | :--- |
| Yıll | Shows the strength of the received signals; 4 bars <br> indicates the strongest signal. |
| LM H | Shows the transmitting power level of the radio: <br> 'L' indicates low Tx power level; <br> 'M' indicates middle Tx power level; <br> 'H' indicates high Tx power level. |
| $\boldsymbol{l}$ | Appears when the radio receives a Sel Call/Call Alert. |
| $\mathbf{\square}$ | Appears when the radio is in "Monitor" state. |
| $\mathbf{Z}$ | Appears when the radio is scanning. |
| $\mathbf{I I I I I I}$ | Function not used. |
| $\mathbf{I \rightarrow \mathbf { I }}$ | Appears when the radio is in talk-around mode. |
| $\mathbf{Q}$ | Function not used. |
| P2 | Appears when the radio is in OST state. |

### 3.4 Rear Panel

(1) Antenna Connector
(2) Power Terminal
(3) External Speaker Jack
3.5 Auxiliary Functions for Programmable Buttons

The following auxiliary functions can be assigned to , P1, P2, P3 buttons by the distributor.

| No. | Function | Description |
| :---: | :---: | :---: |
| 0 | None | No function is assigned. |
| 1 | Channel Up | Select the next channel. |
| 2 | Channel Down | Select the previous channel. |
| 3 | Zone Up | Select the next zone. |
| 4 | Zone Down | Select the previous zone. |
| 5 | Display CH Frequency | Press the button, frequency of the current channel will be shown on the LCD. |
| 6 | Display $\quad \mathrm{CH}$ Alias | Press the button, alias of the current channel will be shown on the LCD. |
| 7 | Display Mode Switch | Press the button to switch the display mode between "Channel No.", "Channel Alias", "Zone No.", "Zone Alias", and "Channel Frequency". |
| 8 | OST | This allows the radio user to change the QT/DQT setting of current channel by pre-programmed OST list. |
| 9 | Power Level | This allows the radio user to adjust the transmit power setting to "High", "Mid" or "Low". Meanwhile, the LCD will display " H ", " M ", "L" respectively. |
| 10 | Squelch Level | Press the button to enter "Squelch Level Adjustment Mode", then the user can adjust the squelch level by pressing / Press P3 button to save the selected squelch level and the radio then quits this mode. |
| 11 | Key Lock | Press to lock/unlock some keys. |
| 12 | Scan | Press to start/stop scanning. |
| 13 | FCS | Press to start free channel scanning (FCS). |
| 14 | Nuisance Delete (temporarily) | When the radio lands on an unwanted channel during scanning, press the button to delete this channel temporarily. When exit scan mode and enter it again, the channel will be added to the scan list again. |
| 15 | Public Address | Press to enable the public address function. When press and hold the PTT key and speak to the microphone, your voice will be heard by yourself and surround people through the external speaker, but will not be transmitted. Press this button again to disable the public address function, and the radio returns to user mode. |
| 16 | Home Channel | Press the button to switch to the preset home channel. If the radio has set two home channels, it will switch to home channel 1 upon pressing this button, and will switch to home channel 2 if you press this button again within 2 seconds, and will switch to the original channel if you press this button for the third time within 2 seconds. When switching to the home channel, the zone is also switched. If the radio has only set one home channel, the radio will switch between the working channel and the home channel upon pressing this button within 2 seconds. If the interval between two pressings is longer than 2 seconds, the radio will always switch to home channel 1. |
| 17 | Talk Around | Press the button to toggle between Repeater Mode and Talkaround Mode. In Talkaround Mode, the Rx parameters are used in place of the Tx parameters when transmitting. |

| 18 | Momentary <br> Monitor / Call <br> Cancel | Press and hold the button, QT/DQT/2Tone/5Tone/DTMF <br> signaling will be closed. Release the button to return to <br> normal operation. Press the button during the Select Call <br> state, the radio will exit Select Call state. |
| :--- | :--- | :--- |
| 19 | Monitor/Call <br> Cancel | Press the button to close QT/DQT/2Tone/5Tone/DTMF <br> signaling, then you can receive signals that cannot be <br> received during normal operation. Press the button again <br> to resume normal operation. Press the button during the <br> Select Call state, the radio will exit Select Call state. |
| 20 | Momentary <br> Squelch Off <br> Call Cancel | Press and hold the button to open squelch; release it to <br> resume normal operation. <br> Press it during the Select Call state, the radio will exit <br> Select Call state. |
| 21 | Squelch <br> Off/Call Cancel | Press the button to open squelch; press it again to resume <br> normal operation. |
| 22 | Emergency | Press the button to make an alarm tone according to the <br> setting of the programming software or send your ID or <br> background sound to your partner or the system. |
| 23 | Call 1 | Press to send the preset code. |
| 24 | Call 2 | Press to send the preset code. |
| 25 | Call 3 | Press to send the preset code. |
| 26 | Call 4 | Press to send the preset code. |
| 27 | Menu <br> Select/Enter | Press to enter the Menu Mode, to make menu selections <br> and save. |
| 28 | Lone Worker | Press to enable/disable Lone Worker function. |
| 29 | Scan List Edit | This allows the radio-user to edit a Scan List. Scan List <br> editing is only available for Scan Lists where the User <br> Programmable field has been enabled. |
| 30 | Backlight | Press to toggle between "Light", "Dark" and "Auto" for <br> the backlight. |

## Chapter 4 Circuit Description

### 4.1 Frequency Configuration

Figure 4.1 Frequency Configuration
The receiver adopts double mixing. The first IF is 49.95 MHz and the second IF is 450 kHz .

The first local oscillator signal of the receiver is generated by the frequency synthesizer and the second local oscillator signal is generated by frequency tripler X1.

The transmitter signal is produced by the frequency synthesizer.

The reference frequency of the frequency synthesizer is
provided by TCXO.

### 4.2 Principle of Receiver (RX)

Figure 4.2 Principle of Receiver

## Front end

The signal coming from the antenna passes through the RX/TX switch circuit (D3 and D37), and passes through a BPF consists of two LCs to remove unwanted out-of-band signals, and then is routed to the low noise amplifier (LNA) consists of Q18 and its peripheral components where it is amplified.

Output signal from the LNA passes through a BPF consists of three LCs to further remove unwanted out-of-band signal, and then goes to the first mixer $(\mathrm{Q} 19)$.

## AGC circuit

AGC circuit, which consists of Q16 and its peripheral circuit, will work to reduce the gain of Q18 only when the input signal is too large.

## First mixer

The Rx signal from LNA is mixed with the first local oscillator signal from the frequency synthesizer to produce the first IF signal ( 49.95 MHz ).

## IF circuit

The first IF signal passes through the crystal filter (XF1) to remove the adjacent channel signal and signal outside the adjacent channel. Then the filtered signal is amplified by the first IF amplifier (Q20), and is sent to the IF processing IC (IC6, TA31136).

IF IC consists of the second mixer, IF amplifier, limiter, discriminator, noise amplifier, and audio low pass filter.

Signal ( 16.8 MHz ) from X1 is multiple-amplified by Q11 and its peripheral circuit to produce the second local oscillator signal. Then the second local oscillator signal $(50.4 \mathrm{MHz})$ is mixed with the first IF signal ( 49.95 MHz ) in IC6 to generate the second IF signal $(450 \mathrm{kHz})$. And then the second IF signal is amplified and limited in IC6, filtered by its ceramic filter (CF1 or CF2, 450 kHz ), and then demodulated in IC6. After that, the demodulated signal is routed to the audio circuit to output audio signal.

The selection circuit of the second IF filter consists of CF1, CF2, D20, D21, and the peripheral circuit. When the mobile radio is set to wideband, CF2 is put through and takes effect, while

CF1 is cut off; when the mobile radio is set to narrowband, CF1 is put through and takes effect, while CF2 is cut off.

## Squelch circuit

The demodulated signal from IC6 is sent to the internal noise amplifier in IC6. Then the resulting signal is further amplified in Q21 and demodulated in D25, and then the resulting DC level is sent to the MCU squelch control circuit. This voltage is in inverse proportion to the input signal.

### 4.3 Principle of Transmitter (TX)

## TX power amplification

Figure 4.3 Principle of Power Amplifier and Antenna Switch
The modulated RF signal from VCO is amplified by $\mathrm{Q} 1, \mathrm{Q} 2$, Q4, and Q5, and is sent to IC1 for power amplification. Output power of IC1: 25 W .

Grid bias of IC1 is controlled by the APC circuit. Through changing the grid bias voltage, the Tx output power can be controlled conveniently.

## APC (Automatic Power Control) circuit

D9 and D10 are RF detector diodes. The output power of the RF amplifier is detected by RF detector diodes and converted into DC level. Then the DC level is compared with the signal from MCU and amplified in IC4, and is sent to grid in IC1 to control the power output.

If the Tx output power is too high, the voltage detected by the detector diodes will increase; IC4 output voltage will decrease, so the bias voltage imposed on IC1 will also decrease, which causes the Tx output power to be lowered, and vice versa. Thus, the Tx output power can keep stable under different working conditions.

MCU can set the power through changing the voltage input to IC4.

### 4.4 Principle of Frequency Synthesizer

Figure 4.4 Frequency Synthesizer
PT8100 adopts PLL type frequency synthesizer.

The frequency synthesizer consists of reference oscillator, voltage control oscillator (VCO), programmable divider, phase comparator, and low pass filter (LPF).

Tx VCO unit consists of Q6, D1, D4, D5, and D6. D8 is the modulation circuit of Tx VCO.

Rx VCO unit consists of Q12, D14, D16, D17 and D18.
IC3 (MB15E03SL) is the PLL integrated circuit, which consists of programmable reference divider, programmable divider, phase comparator, and charge pump.

The low pass filter consists of R54 and C113.
The reference frequency is provided by X 1 (TCXO, 16.8 MHz ).

Reference frequency from TCXO (Temperature-Controlled Crystal Oscillator) is divided by the programmable reference divider in IC3 to produce reference frequency of 5 kHz or 6.25 kHz (determined by the preset channel frequency and is controlled by MCU).

The oscillation frequency from VCO goes to IC3 where it is divided by the programmable divider and is then compared with the reference frequency to obtain the error signal. The signal is then filtered by a low pass filter and is sent to VCO to change the oscillation frequency of the VCO , enabling the frequency to reach the set value. Then the VCO is locked.

Unlock detection: When PLL is unlocked, pin14 of IC3 will output low level signal to MCU. Then MCU prohibits the $T x$ from transmitting and makes an alert tone.

### 4.5 Audio Processing Circuit

Figure 4.5 Audio Processing

## MIC signal processing:

Voice signal from MIC is sent to IC13A for amplification (IC13A, D32, Q32 and other components form the AGC circuit to improve the dynamic range of the circuit). Then the resulting signal is pre-emphasized by C322 and R267 and goes to the IDC circuit consists of IC13B. After being limited, the signal is switched into wideband or narrowband in Q30 and then passes through the low pass circuit consists of IC13C and IC13D to remove signals above 3000 Hz . Then the filtered signal is sent to VR2 to adjust the deviation and modulated by D8, and then is

## sent to Tx VCO

## Rx audio signal processing:

Voice signal from IC6 is divided into two parts. One branch of the signal is routed to the low pass circuit consists of IC8, where it is amplified and filtered (to remove the voice signal) to obtain more purified CTCSS/DCS signal, which is then sent to MCU for processing. The other branch of the signal goes to IC9. After being amplified by IC9C (Q29 is the gain switching circuit which is used to switch volume between wideband and narrowband), the signal is divided into two branches again. One branch is sent to the 2 -tone (5-tone) shaping circuit consists of Q8, Q52 and IC10, where it is shaped into better square wave signal, and then is sent to MCU to judge the 2-tone (5-tone) signal; the other branch passes through the high pass circuit consists of IC9D to remove the sub-audio signal and passes through the de-emphasis circuit consists of R173 and C245. Then the de-emphasized signal is passed through the low pass circuit consists of IC9A and IC9B and the high pass circuit consists of Q26. After that, the resulting signal goes to the volume switch where the signal volume will be adjusted. After being amplified in IC7, the signal will be output to drive the speaker.

Impedance of the speaker: $16 \Omega$
Note:

* None of the terminals of the speaker should be grounded.
* The emergency alarm sound has no volume limit.

### 4.6 Power Supply:

The radio uses 13.8 V battery, and the Tx power amplification circuit (IC1) and Rx audio power amplifier (IC7) directly adopt the battery for power supply.
IC17: 3V, LDO, micropower regulator, which supplies power for MCU, DTMF decoding unit etc.

IC16: 8V, LDO, micropower regulator.
Q38: 8T switch, which is controlled by MCU.
8T: Supplies power for front end of transmitter.
Q40: 8R switch, which is controlled by MCU
8R: Supplies power for RF amplifier and mixer of the receiver.

### 4.7 MCU Unit

MCU unit controls the operation of each unit of the radio so that all functions can be realized.

Communicate with external PC.
Access the status data of the radio.
Control the PLL to generate Rx and Tx local oscillator frequencies.

Obtain status parameters of the working channel.

Control status of LED indicator
Control power supply for each unit.
Check the actions of each functional key.
Generate CTCSS signal.
Generate DCS signal.
Generate power control signal.
Perform CTCSS decoding.
Perform DCS decoding.
Perform 2Tone (5Tone) decoding.
Test and control the squelch.
Control content of voice alert.

### 4.8 Memory (E ${ }^{2}$ PROM, AT24C512)

The memory is stored with channel data, CTCSS/DCS data, other data for function setting, and parameter adjusting data.

## CTCSS/DCS signal encoding and decoding:

CTCSS/DCS signal (output from pin97, PWM wave) generated by MCU is sent to TCXO for modulation; and the CTCSS/DCS signal (output from pin98, PWM wave) is sent to VCO modulation.

CTCSS/DCS signal from the receiver is sent to MCU for decoding. MCU checks if the CTCSS/DCS signal in the receiving signal matches the preset value of the radio, and determines whether to open the speaker or not.

## CTCSS

CTCSS (Continuous Tone Control Squelch System) is a squelch control system which is modulated on carrier and is guided by a continuous sub-audio signal. If CTCSS is set, the communication between the transmitting and receiving radios can be realized only when the two radios have set the same CTCSS frequency. In doing this, disturbance from other signals can be avoided.

PT8100 has 39 groups of standard CTCSS frequencies for your selection. See Table 4.1.

CTCSS signal (PWM wave) is generated by MCU, and is passed through low pass filter consists of RC to remove the high frequency components (above 300 Hz ). Then the resulting signal is routed to VCO for modulation.

Table 4.1 CTCSS Frequencies

| No. | Frequency <br> $[\mathbf{H z}]$ | No. | Frequency <br> $[\mathbf{H z}]$ | No. | Frequency <br> $[\mathbf{H z}]$ | No. | Frequency <br> $[\mathrm{Hz}]$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 67.0 | 11 | 94.8 | 21 | 131.8 | 31 | 186.2 |
| 2 | 69.3 | 12 | 97.4 | 22 | 136.5 | 32 | 192.8 |
| 3 | 71.9 | 13 | 100.0 | 23 | 141.3 | 33 | 203.5 |

| 4 | 74.4 | 14 | 103.5 | 24 | 146.2 | 34 | 210.7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | 77.0 | 15 | 107.2 | 25 | 151.4 | 35 | 218.1 |
| 6 | 79.7 | 16 | 110.9 | 26 | 156.7 | 36 | 225.7 |
| 7 | 82.5 | 17 | 114.8 | 27 | 162.2 | 37 | 233.6 |
| 8 | 85.4 | 18 | 118.8 | 28 | 167.9 | 38 | 241.8 |
| 9 | 88.5 | 19 | 123.0 | 29 | 173.8 | 39 | 250.3 |
| 10 | 91.5 | 20 | 127.3 | 30 | 179.9 |  |  |

## DCS

DCS (Digital Code Squelch), which is used to control squelch, is a series of continuous digital codes modulated on carrier together with voice signal. If DCS is set, the speaker can be opened only when the radio receives signal with the same DCS to avoid disturbance of unwanted signals.

PT8100 has 83 standard codes (inverted and non-inverted) for your selection. See Table 4.2.

DCS signal (PWM wave) is produced by MCU. It passes through the low pass filter consists of RC to remove the high frequency components (above 300 Hz ). Then the resulting signal is sent to VCO and TCXO for modulation, with HF components of the DCS signal being modulated by VCO, and the LF components of the DCS signal being modulated by TCXO.

The DCS signal coming from the receiver is routed to MCU for decoding. MCU checks if the DCS code in the received signal matches the preset DCS of the radio, and determines whether to open the speaker or not.

Table 4.2 DCS Codes

| 023 | 114 | 174 | 315 | 445 | 631 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 025 | 115 | 205 | 331 | 464 | 632 |
| 026 | 116 | 223 | 343 | 465 | 654 |

| Guarantee attenuation | 47.0 dB or higher |
| Terminal impedance | $1.5 \mathrm{k} \Omega$ |

## Chapter 5 Mode Introduction

## Mode Introduction

| Mode |  | Function | How to enter |
| :---: | :---: | :---: | :---: |
| User Mode |  | For normal use | Power ON |
| PC Mode | Data <br> Programming <br> Mode | Used to read and write frequency data and other features to and from the radio | Received commands from PC. See below for further information. |
|  | PC Test Mode | Tune the radio parameters by PC | Received commands from PC. See below for further information. |
|  | Firmware Programming Mode | Upgrade the radio when new features are released | Received commands from PC. See below for further information. |
| Wired Clone Mode |  | Used to transfer programming data from one radio to another | Press and hold P1 and P2 for over 2 seconds while turning the radio power ON |
| Firmwar <br> Mode | Version Display | Display firmware version | Press and hold while turning the radio power on to see the firmware version; release the button to enter user mode |

### 5.1 Data Programming Mode

The radio has been set before leaving the factory. However, due to different requirements of users, the radio's operating frequency, channels, CTCSS/DCS, auto scan, and other functional parameters should be reprogrammed. Therefore, Kirisun has specially designed a set of Chinese/English programming software KSP8100 with friendly interface,
convenient operation and visualized display for setting functional parameters of the radio.

Steps for setting the functional parameters of the radio by PC are as follows:
A. Install KSP8100 on the PC.
B. Connect the mobile radio to the serial port of the PC with the special programming cable. Refer to the figure below.

Figure 5.1
C. Turn the computer power ON .
D. Turn the radio power ON.
E. Run the KSP8100 programming software by double clicking on its executive program.
F. Click "Program" in the main menu of KSP8100, and click "Read from radio" in the pull-down menu to read parameters of the radio to the computer; click "Write to radio" in the pull-down menu to write parameters in the computer to the radio.
G. The following parameters can be set by using KSP8100 according to requirements of the user:

1) Functions of programmable buttons
2) Alert tone
3) Optional functions
4) 2 Tone/DTMF/5Tone signalling
5) TOT
6) Emergency alarm
7) Personal template
8) Scan/FCS/Vote functions
9) Channel information

Please refer to the "Help" document of KSP8100 for details. Note:

1. Please turn the radio power off before connecting it to the PC .
2. While reading data from the mobile radio, the LED on the radio lights red, and the PTT key should not be pressed; while writing data to the mobile radio, the LED on the radio lights green.
3. Please firstly read data of the radio and back up the data before editing the parameters on KSP8100.
4. If the radio cannot function normally after being written in with the edited data, please rewrite the backup data into the radio.
5. "Model Information" is important for the radio; users should not modify it.
6. After the programming is finished, the mobile radio will restart automatically and return to the user mode.

Connect the radio to the serial port of the computer with the special programming cable. Refer to Figure 5.1.
Warning: Before entering the PC Test Mode, please firstly connect a $50 \Omega \mathrm{HF}$ load to the antenna connector of the radio or connect the radio to a general test set.

With the KSP8100 programming software, you can enter the Tuning Mode under PC Test Mode to tune the following parameters of the radio:

1) Frequency
2) Low/Mid/High power
3) Tone Deviation
4) DTMF Deviation
5) DCS Balance
6) DCS Deviation
7) CTCSS (67) Deviation
8) CTCSS (151.4) Deviation
9) CTCSS (254.1) Deviation
10) Rx Sensitivity
11) SQL9/SQL1 On
12) SQL9/SQL1 Off
13) RSSI Level1/Level4

### 5.3 Firmware Programming Mode

The radio is equipped with an internal Flash ROM which can be upgraded when new features are released. The operation procedures are as follows:

1. Turn the radio power ON and the radio enters User Mode.
2. Run the firmware programming software KMU on PC.
3. Connect the radio to the computer by the programming cable.
4. Select a COM port and proper baud rate (115200 is recommended) according to the actual situation. Then click on "E.P" to start downloading. The LCD will display "Firmware".
5. After the communication ends successfully, click on "OK" to exit.
6. If you want to continue programming other radios, repeat steps 1 to 5 .

## Chapter 6 Disassembly and Assembly for Maintenance

The radio is a kind of sophisticated communication equipment with precise structure and small size. You should assemble and disassemble it carefully during the maintenance. The instructions for the assembly and disassembly are as follows.
6.1 Exploded View

| No. | Part No. | Description | PCS |
| :---: | :---: | :---: | :---: |
| 1 | 201-008100-R02A | Volume Knob | 1 |
| 2 | 203-007200-R08 | Nut for Knob | 1 |
| 3 | 204-008200-R08A | LCD Protective Film | 1 |
| 4 |  | LOGO | 1 |
| 5 | 201-008100-R05A | Light Guide | 1 |
| 6 | 301-25050J-R01C | Screw M2.5*5 | 6 |
| 7 | 201-008100-R01A | Front Cabinet | 1 |
| 8 | 204-008000-R01A | Dustproof Net for Speaker | 1 |
| 9 | 121-100000-R19 | Speaker | 1 |
| 10 | 120-400000-R14 | Speaker Wire | 1 |
| 11 | 120-400000-R15 | Flat Cable | 1 |
| 12 | 204-008000-R02A | Upper Dustproof Strip for Front Cabinet | 1 |
| 13 | 204-008000-R03A | Lower Dustproof Strip for Front Cabinet | 1 |
| 14 | 203-008000-R02B | Al Top Case | 1 |
| 15 | 120-100000-R42A | Power Cable | 1 |
| 16 | 201-008100-R03A | Power Cable Fastener | 1 |
| 17 | 203-008000-R03A | Metal Baffle Plate | 1 |
| 18 | 202-008200-R02A | Rubber Plug for External Speaker Jack | 1 |
| 19 | 303-30100G-R01 | Screw M3*10, with Spring Washer | 5 |

| 25 | 301-30060G-R01 | Screw M3*6 | 7 |

| 26 | 204-008000-R04A | Dustproof Strip between Top and Bottom Al Case | 2 |
| :---: | :---: | :---: | :---: |
| 27 | 203-008000-R01B | Al Bottom Case | 1 |
| 28 | 301-30250D-R01 | Screw M3*25 | 6 |
| 29 | 201-008100-R04A | Lens | 1 |
| 30 | 202-008100-R01A | Rubber Key | 1 |
| 31 | 203-008100-R01A | Metal Dome | 1 |
| 32 | 202-008000-R03A | Heat Conductive Rubber Cushion | 1 |
| 33 | 202-008100-R02A | LCD Dustproof Rubber Cushion | 1 |
| 34 |  | PCB Assembly | 1 |
| 35 | 302-26060D-R01 | Screw M2.6*6 | 3 |

### 6.2 Instruction for Disassembly of the Radio for Maintenance

6.2.1 RF-PCB disassembly
(1) Screw off the six M3*25 screws on the Al bottom case, and remove the Al bottom case (See figure below).
(2) Screw off the two screws for power module and then remove the shield for power module. Then remove the solder of the power module on the PCB with a soldering iron (See figure below).
(3) Screw off the four M2.5*5 screws on the baffle plate, and then remove the metal baffle plate, the power cable fastener and the rubber plug for external speaker jack (See figure below).

(4) Remove the flat cable and the speaker wire, and then remove the solder between the antenna connector and the RF-PCB with a soldering iron. Screw off the screws, and take the RF-PCB out of the top Al case carefully (See figure below).

6.2.2 Key-PCB disassembly
(1) Screw off the six M3*25 screws on the Al bottom case, and remove the bottom case (See figure below).
(2) Remove the flat cable and speaker wire (See figure below).
(3) Screw off the two M2.5*5 screws on the front cabinet, and then separate the front cabinet from the main machine (See figure below).

(4) Pull out the volume knob, and then remove the circlip and nut for volume knob (See figure below).
(5) Screw off the three fixing screws (M2.6*6) for Key-PCB, and then take the Key-PCB out of the plastic front cabinet (See figure below).

After the disassembly above, you can repair and adjust the radio according its actual malfunction.

PT8100 Service Manual

## Chapter 7 Adjustment

Before test/adjustment, make sure all equipment has been well grounded!

Before test/adjustment, make sure the antenna output terminal has been correctly connected to corresponding equipment or load!

The transmitter output terminal must be terminated with an RF power attenuator and connected to a standard signal generator (SSG)/frequency counter/deviation meter/spectrum analyzer!

Make sure no transmission operation is being conducted while measuring the receiver!

During the adjustment/test/maintenance, make sure reliable anti-static measures are taken for human body and equipment.

### 7.1 Equipment and Software Required for Test and Adjustment

Equipment and software listed in Table 7.1 are required for test and adjustment of PT8100.

Table 7.1 Equipment and Software Required for Test and
Adjustment

| No. | Item | Specifications |
| :--- | :--- | :--- |
| 1 | Computer | P2 or above, IBM compatible PC, WINDOWS <br> $98 / \mathrm{ME} / 2000 /$ XP Operating System |
| 2 | Programming <br> software <br> Programming <br> cable | KSP8100 |
| 4 | Clone cable | KSPL05 |
| 5 | DC regulated <br> power supply | Output voltage: 13.8 V <br> Output current: $\geq 20 \mathrm{~A}$ |
| 6 | RF power meter | Measurement range: $0.5-50 \mathrm{~W}$ <br> Frequency range: $100 \mathrm{MHz}-500 \mathrm{MHz}$ <br> Impedance: $50 \Omega$ <br> SWR $\leq 1.2$ |
| 7 | Frequency <br> counter | Frequency range: $0.1-600 \mathrm{MHz}$ <br> Frequency accuracy: better than $\pm 1 \times 10^{-6}$ <br> Sensitivity: better than 100 mV |
| 8 | Deviation meter | Frequency range: DC -600 MHz <br> Measurement range: $0- \pm 5 \mathrm{kHz}$ |
| 9 | DMM | Input impedance: above $10 \mathrm{M} \Omega / \mathrm{V} \mathrm{DC} capable of$, <br> measuring voltage, current and resistance. |
| 10 | Audio <br> generator | Frequency range:2-3000Hz <br> Output level: $1-500 \mathrm{mV}$ |
| 11 | RF <br> attenuator | power |
| 12 | Standard <br> Attenuation: 40 dB or 50 dB <br> Supporting power $:$ higher than 50 W |  |
| 13 | Oscilloscope | Frequency range: $10 \mathrm{MHz}-1000 \mathrm{MHz}$ <br> Output level: $0.1 \mathrm{lV}-32 \mathrm{mV}(-127 \mathrm{dBm} \sim-17 \mathrm{dBm})$ |
| 14 | Audio frequency <br> voltmeter | Frequency range: $\mathrm{DC} \sim 20 \mathrm{MHz}$ <br> Test range: $10 \mathrm{mV}-20 \mathrm{~V}$ |
| Test range: $10 \mathrm{mV}-10 \mathrm{~V}$ |  |  |

Recommendation: Item $6,7,8,10,11$, and 12 listed in the table can be replaced by HP8920 general test set.

Figure 7.1 External Microphone Interface Definition

### 7.2 Adjustment

After changing components during the maintenance, it is necessary to test the radio and adjust its technical parameters. The following part is going to introduce the adjustment items.

Some parameters can be adjusted by use of KSP8100 programming software (in the Tuning Mode). The adjustable parameters are as follows:

### 7.2.1 VCO

a. Adjust the channel to its high frequency point (See Table 7.2).
b. Under the receiving status, measure the voltage of PD by DMM. Then adjust the PD voltage to be $3.5 \mathrm{~V} \pm 0.3 \mathrm{~V}$ by tuning the trimming capacitor C122.
c. Under the transmitting status, measure the voltage of PD by DMM. Then adjust the PD voltage to be $3.5 \mathrm{~V} \pm 0.3 \mathrm{~V}$ by tuning the trimming capacitor C39.
d. Adjust the channel to its low frequency point (See Table 7.2).
e. Under the receiving status, measure the voltage of PD by DMM , the value should be larger than 0.6 V .
f. Under the transmitting status, measure the voltage of PD by DMM , the value should be larger than 0.6 V .

Table 7.2 High/Center/Low Frequency Point for PT8100

|  | Low Freq Point | Center Freq Point | High Freq Point |
| :--- | :--- | :--- | :---: |
| PT8100-01 | 136.125 MHz | 154.125 MHz | 173.975 MHz |
| PT8100-02 | 400.125 MHz | 425.125 MHz | 449.975 MHz |
| PT8100-03 | 438.125 MHz | 464.125 MHz | 489.975 MHz |

7.2.2 Tx deviation (set the HP8920 to be in the Tx status, and set the filter to be $50 \mathrm{~Hz} \sim 15 \mathrm{kHz}$ )
a. Input audio signal of $120 \mathrm{mV}, 1000 \mathrm{~Hz}$ to the MIC jack of the radio.
b. Set the channel to its low frequency point (See Table 7.2).
c. Press and hold the PTT key while adjusting VR2 to make the deviation be 4.2 kHz .
d. Observe the deviation of other channels, which should be larger than 3.5 kHz .
7.2.3 PLL frequency (set the HP8920 to be in the Tx status)

In the "Tuning Mode", double click "Frequency Stability", and adjust the value within the range of $0 \sim 255$ to make the Tx frequency reach the rated value (within $\pm 100 \mathrm{~Hz}$ ).
7.2.4 Tx power (set the HP8920 to be in the Tx status)
a. In the "Tuning Mode", double click "Tx High Power", and adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of 0~255 to make the Tx power be 22 W . Meanwhile, observe the operating current, which should be no larger than 7A.
b. In the "Tuning Mode", double click "Tx Mid Power", and adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of 0~255 to make the Tx power be 10 W . Meanwhile, the operating current should be no larger than 5A.
c. In the "Tuning Mode", double click "Tx Low Power", and adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of $0 \sim 255$ to make the Tx power be 5 W .
7.2.5 DCS waveform balance (set the HP8920 to be in the Tx status, and set the filter to be $20 \mathrm{~Hz} \sim 300 \mathrm{~Hz}$ )
a. In the "Tuning Mode", double click "DCS Balance", select wideband, and adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of $0 \sim 255$ to make the waveform be similar to good square wave.
b. In the "Tuning Mode", double click "DCS Balance", and select narrowband. Adjust the value within the range of $0 \sim 255$ to make the waveform be similar to good square wave.
7.2.6 DCS Deviation (set the HP8920 to be in the Tx status, and set the filter to be $20 \mathrm{~Hz} \sim 300 \mathrm{~Hz}$ )
a. In the "Tuning Mode", double click "DCS Deviation", and select "Wideband". Adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of $0 \sim 255$ to make the deviation be 0.75 kHz .
b. In the "Tuning Mode", double click "DCS Deviation", and select "Narrowband". Adjust the value within the range of 0~255 to make the deviation be 0.35 kHz .
7.2.7 QT (67) Deviation (set the HP8920 to be in the Tx status, and set the filter to be $20 \mathrm{~Hz} \sim 300 \mathrm{~Hz}$ )
a. In the "Tuning Mode", double click "QT(67) Deviation", and select "Wideband". Adjust the five frequency points of "Lowest",
"Low", "Mid", "High" and "Highest" respectively within the range of $0 \sim 255$ to make the deviation be 0.75 kHz .
b. In the "Tuning Mode", double click "QT(67) Deviation", and select "Narrowband". Adjust the value within the range of 0~255 to make the deviation be 0.35 kHz .
7.2.8 QT (151) Deviation (set the HP8920 to be in the Tx status, and set the filter to be $20 \mathrm{~Hz} \sim 300 \mathrm{~Hz}$ )
a. In the "Tuning Mode", double click "QT(151) Deviation", and select "Wideband". Adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of $0 \sim 255$ to make the deviation be 0.75 kHz .
b. In the "Tuning Mode", double click "QT(151) Deviation", and select "Narrowband". Adjust the value within the range of 0~255 to make the deviation be 0.35 kHz .
7.2.9 QT (254) Deviation (set the HP8920 to be in the Tx status, and set the filter to be $20 \mathrm{~Hz} \sim 300 \mathrm{~Hz}$ )
a. In the "Tuning Mode", double click "QT(254) Deviation", and select "Wideband". Adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of $0 \sim 255$ to make the deviation be 0.75 kHz .
b. In the "Tuning Mode", double click "QT(254) Deviation", and select "Narrowband". Adjust the value within the range of 0~255 to make the deviation be 0.35 kHz .
7.2.10 Tone Deviation/DTMF Deviation (set the HP8920 to be in the Tx status, and set the filter to be $50 \mathrm{~Hz} \sim 15 \mathrm{kHz}$ )
a. In the "Tuning Mode", double click "Tone Deviation/DTMF Deviation", and select "Wideband". Adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of $0 \sim 255$ to make the deviation be 3.5 kHz .
b. In the "Tuning Mode", double click "Tone Deviation/DTMF Deviation", and select "Narrowband". Adjust the value within the range of $0 \sim 255$ to make the deviation be 1.7 kHz .

### 7.2.11 Rx Sensitivity (set the HP8920 to be in the Rx status)

In the "Tuning Mode", double click "Rx Sensitivity", and adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively within the range of 0~255 to make the sensitivity of each frequency point be the highest.

See Table 7.4 for detailed parameters.
7.2.12 Rx squelch (set the HP8920 to be in the Rx status)
a. In the "Tuning Mode" (input RF signal with the same
frequency as the adjusted frequency point and with the signal level of -116 dBm , audio frequency of 1 kHz , and deviation of 3 kHz to the antenna connector of the mobile radio), double click "SQL9 Open", and select "Wideband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
b. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -116 dBm , audio frequency of 1 kHz , and deviation of 1.5 kHz to the antenna connector of the mobile radio), double click "SQL9 Open", and select "Narrowband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
c. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -118 dBm , audio frequency of 1 kHz , and deviation of 3 kHz to the antenna connector of the mobile radio), double click "SQL9 Close", and select "Wideband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
d. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -118 dBm , audio frequency of 1 kHz , and deviation of 1.5 kHz to the antenna connector of the mobile radio), double click "SQL9 Close", and select "Narrowband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
e. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -123 dBm , audio frequency of 1 kHz , and deviation of 3 kHz to the antenna connector of the mobile radio), double click "SQL1 Open", and select "Wideband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK",
the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
f. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -123 dBm , audio frequency of 1 kHz , and deviation of 1.5 kHz to the antenna connector of the mobile radio), double click "SQL1 Open", and select "Narrowband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
g. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -125 dBm , audio frequency of 1 kHz , and deviation of 3 kHz to the antenna connector of the mobile radio), double click "SQL1 Close", and select "Wideband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
h. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -125 dBm , audio frequency of 1 kHz , and deviation of 1.5 kHz to the antenna connector of the mobile radio), double click "SQL1 Close", and select "Narrowband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.

### 7.2.13 Rx RSSI (set the HP8920 to be in the Rx status)

a. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -116 dBm , audio frequency of 1 kHz , and deviation of 3 kHz to the antenna connector of the mobile radio), double click "RSSI Levell", and select "Wideband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
b. In the "Tuning Mode" (input RF signal with the same
frequency as the adjusted frequency point and with the signal level of -116 dBm , audio frequency of 1 kHz , and deviation of 1.5 kHz to the antenna connector of the mobile radio), double click "RSSI Level1", and select "Narrowband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment is completed.
c. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -80 dBm , audio frequency of 1 kHz , and deviation of 3 kHz to the antenna connector of the mobile radio), double click "RSSI Level4", and select "Wideband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment of that frequency point is completed. Use the
method to adjust the five frequency points of "Lowest", "Low", "Mid", "High" and "Highest" respectively.
d. In the "Tuning Mode" (input RF signal with the same frequency as the adjusted frequency point and with the signal level of -80 dBm , audio frequency of 1 kHz , and deviation of 1.5 kHz to the antenna connector of the mobile radio), double click "RSSI Level4", and select "Narrowband". Choose a frequency point, and click "Begin", the programming software will adjust the value automatically. When the value keeps stable, click "OK", the adjustment is completed.

### 7.3 Adjustment Description

Refer to Table 7.3, 7.4, and 7.5 for the above mentioned adjustment.

Table 7.3 VCO

Table 7.4 Receiver Section

| Item | Test Condition | Test Equipment | Measurement Terminal | Adjustment Parts | Requirement | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| BPF |  | Spectrum analyzer / General test set | Before mixing | Tuning <br> mode | Smooth wave | User adjustment not recommended |
| Audio <br> Power | Test freq: Mid freq point Antenna connector input: RF OUT: $-47 \mathrm{dBm}(1 \mu \mathrm{~V})$ MOD: 1 kHz DEV: $\pm 3.0 \mathrm{kHz} / \pm 1.5 \mathrm{kHz}$ Audio load: $8 \Omega$ | RF signal | Speaker connector | Tuning <br> mode | (Turn the volume knob clockwise to the end) Audio power $>4 \mathrm{~W}$ |  |

## Chapter 8 Specifications

### 8.1 General Specifications

| Product Model | PT8100 |  |
| :--- | :--- | :--- |
| Frequency | $136-174 \mathrm{MHz}$ | $400-450 \mathrm{MHz}$ |
|  | $438-490 \mathrm{MHz}$ | $350-400 \mathrm{MHz}$ |
| Type of Modulation | $16 \mathrm{~K} \Phi F 3 \mathrm{E} / 11 \mathrm{~K} \Phi \mathrm{~F} 3 \mathrm{E}$ |  |
| Number of Channels | 256 |  |
| Channel Spacing | $25 \mathrm{kHz} / 12.5 \mathrm{kHz}$ |  |
| IF | $1^{\text {st }} \mathrm{IF}: 49.95 \mathrm{MHz} ; 2^{\text {nd }} \mathrm{IF}: 450 \mathrm{kHz}$ |  |
| Operating Voltage | 13.8 V, cathode grounded |  |
| Operating <br> Temperature | $-30^{\circ} \mathrm{C} \sim+60^{\circ} \mathrm{C}$ |  |
| Antenna Impedance | $50 \Omega$ |  |
| MIC Impedance | $2.2 \mathrm{k} \Omega$ |  |
| Dimension | $150 * 43^{*} 131 \mathrm{~mm}$ (radio only) |  |
| Weight | 1070 g (radio only) |  |

### 8.2 RX Part

| Usable Sensitivity (12dB SINAD) | $\leq-118 \mathrm{dBm}$ |
| :--- | :--- |
| Squelch Open Sensitivity | $\leq-121 \mathrm{dBm} @$ SQL1 |
| Rx Residual Output | $\mathrm{W}: \leq-45 \mathrm{~dB} ; \mathrm{N}: \leq-40 \mathrm{~dB}$ |
| Modulation Rx Bandwidth | $\mathrm{W}: \pm 7 \mathrm{kHz} ; \mathrm{N}: \pm 3.5 \mathrm{kHz}$ |
| Adjacent Channel Selectivity | $\mathrm{W}: \geq 70 \mathrm{~dB} ; \mathrm{N}: \geq 60 \mathrm{~dB}$ |
| Intermodulation Rejection | $\geq 65 \mathrm{~dB}$ |
| Spurious Response Rejection | $\geq 70 \mathrm{~dB}$ |
| Audio Output Power | $4 \mathrm{~W}, \quad$ balanced <br> distortion $\leq 5 \%, 8 \Omega$ |
| Rx Current Consumption | $\leq 1 \mathrm{~A}$ |
| Standby Current | $\leq 100 \mathrm{~mA}$ |

### 8.3 TX Part

| Tx Power | 20W/5W @ 13.8V DC |
| :--- | :--- |

| Frequency Stability | $\leq \pm 2.5 \mathrm{ppm}$ |
| :--- | :--- |
| Max. Modulation Deviation | $\pm 5 \mathrm{kHz} / \pm 2.5 \mathrm{kHz}$ |
| Modulation Distortion $(300-3000 \mathrm{~Hz})$ | $\leq 3 \%$ |
| Adjacent Channel Tx Power | $\mathrm{W}: \geq 70 \mathrm{~dB} ; \mathrm{N} \geq 60 \mathrm{~dB}$ |
| Spurious Emission | $\geq 70 \mathrm{~dB}$ |
| Residual FM | $\mathrm{W}: \leq-45 \mathrm{~dB} ; \mathrm{N}: \leq-40 \mathrm{~dB}$ |
| Tx Current Consumption | $\leq 7 \mathrm{~A} @ 13.8 \mathrm{~V} \mathrm{DC}$ |

## Chapter 9 Troubleshooting

| No. | Problem | Causes and Solutions |
| :---: | :--- | :--- |
| 1 | $\begin{array}{l}\text { Power on } \\ \text { Failure }\end{array}$ | $\begin{array}{l}\text { A. The power cable is not reliably connected } \\ \text { with the accumulator or the radio, please } \\ \text { reconnect it. Make sure the power voltage } \\ \text { should be larger than 13V. }\end{array}$ |
| B. The fuse of the power cable is burnt out. |  |  |
| Please change it. |  |  |
| C. The power button is in poor contact. Please |  |  |
| change the rubber key or change the key |  |  |
| PCB. |  |  |
| D. The accumulator is out of power. Please |  |  |
| charge it or change a new one. |  |  |$\}$| E. The MCU is broken, please change the IC. |
| :--- |
| F. The zener diode IC17 is broken, please |
| change the IC. |

PT8100 Service Manual

|  |  | channel again. <br> B. The CTCSS/DCS signals of both users are not the same. Please reset it. <br> C. The radio is out of effective communication range. |
| :---: | :---: | :---: |
| 4 | No signal | A. The antenna is in poor contact. Please fasten the antenna until secure. <br> B. The sensitivity is low; please adjust it in the "Tuning Mode". <br> C. The high-frequency amplifying tube Q18 is broken. Please change it. <br> D. The squelch level is too high and the squelch cannot be opened. Please reset the squelch level. <br> E. The mixing tube Q19 is broken. Please change it. <br> F. The FM processing chip IC16 is broken. Please change it. |
| 5 | The transmitting red light is on, but no voice is heard by the recipient. | A. Power module IC1 is broken, so there is no power output, please change it. <br> B. The microphone is broken, please change it. <br> C. The operational amplifier IC13 is broken, please change it. |
| 6 | The receiving green light is on, but no voice is heard. | A. The speaker is broken. Please change it. <br> B. The audio power amplifier IC7 is broken. Please change a new IC. <br> C. The switching tube Q33 is broken, please change a new one. <br> D. The operational amplifier IC9 is broken, please change a new IC. |
| 7 | Abnormal programmin g | A. The programming cable connection is abnormal, check the cable connection. <br> B. The RS-232 serial port output of the computer is abnormal, please check the computer. <br> C. The radio's socket for programming cable is in poor contact, please check the socket. If the socket is abnormal, please change it. |

## Appendix 1 Abbreviations

AMP: Amplify, Amplifier
ANT: Antenna
APC: Automatic Power Control
BPF: Band Pass Filter
CTCSS: Continuous Tone Control Squelch System
DCS: Digital Code Squelch
DEMOD: Demodulation
E²PROM: Electrical Erasable Programmable Read Only Memory HPF: High Pass Filter
IDC: Instantaneous Deviation Control
IF: Intermediate Frequency
LED: Light-Emitting Diode
LNA: Low Noise Amplifier
LPF: Low Pass Filter
MCU: Micro Control Unit
MIC: Microphone
MOD: Modulation
MONI: Monitor
PLL: Phase Lock Loop
PTT: Push-to-talk
RX: Receiver
SPK: Speaker
TCXO: Temperature Controlled Crystal Oscillators
TX: Transmitter
UL: Un-lock
VCO: Voltage Control Oscillator

## Appendix 2 Electronic Parts List

| No. | Part No. | Description | Qty | Position Mark |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 101-08100V-R04 | PT8100PCB / FR4, 1.6mm, PT8100V-100325. PCB, ROHS | 1 |  |
| 2 | 102-0MB90F-R01 | CPU / MB90F882PMC-GE1, LQFP100, FUJITSU, ROHS | 1 | IC11 |
| 3 | 102-1509GV-R01 | Frequency Divider IC / UPB1509GV, ROHS | 1 | IC19 |
| 4 | 102-301317-R01 | power modules / RA30H1317M, ROHS | 1 | IC1 |
| 5 | 102-9124NR-R01 | Reset IC / SYSTEM, RESET, PST9124NR, ROHS | 1 | IC14 |
| 6 | 102-A31136-R01 | IF(FM) demodulation IC / TA31136FN, SS0P, ROHS | 1 | IC6 |
| 7 | 102-AT24C5-R01 | Memory IC / AT24C512BN-SH25, ROHS | 1 | IC12 |
| 8 | 102-B15E03-R01 | PLL IC / MB15E03SL, PLL, 16-PIN, SS0P, ROHS | 1 | IC3 |
| 9 | 102-FP3502-R01 | Voltage regulator IC / XC62FP3502PR, S0T-89, ROHS | 1 | IC2 |
| 10 | 102-HT9172-R01 | DTMF decode IC/ HT9172, SOP, ROHS | 1 | IC5 |
| 11 | 102-L7808C-R01 | Voltage regulator IC / L7808CV, ROHS | 1 | IC16 |
| 12 | 102-M2902V-R01 | Operational amplifier / NJM2902V, 0P-AMP, ROHS | 4 | IC8, IC9, IC10, IC13 |
| 13 | 102-M2904V-R01 | Operational amplifier / NJM2904V, OP-AMP, ROHS | 1 | IC4 |
| 14 | 102-M78L05-R01 | Voltage regulator IC / NJM78L05UA, ROHS | 1 | IC18 |
| 15 | 102-TA7803-R01 | Voltage regulator IC / TA78033AF, TOSHIBA, ROHS | 1 | IC17 |
| 16 | 102-TDA729-R01 | AUDIO, AMP IC / TDA7297D, ST, ROHS | 1 | IC7 |

| 17 | 103-00DZ18-R01 | Chip Voltage regulator diode / 02DZ18 (X. Y), ROHS | 1 | D35 |
| :---: | :---: | :---: | :---: | :---: |
| 18 | 103-0DA221-R01 | Chip diode / DA221 (ROHM), ROHS | 1 | D13 |
| 19 | 103-1SS372-R01 | Chip switch diode / 1SS372 (TOSHIBA), ROHS | 1 | D32 |
| 20 | 103-1SV278-R01 | Chip variable capacitor diode / 1SV278, ROHS | 1 | D8 |
| 21 | 103-709CER-R01 | Chip diode / L709CER, ROHS | 4 | D3, D11, D36, D37 |
| 22 | 103-A2S111-R01 | Chip switch diode / 0603, MA2S111 (PANASONIC), ROHS | 2 | D12, D15 |
| 23 | 103-DAN222-R01 | Chip switch diode/ DAN222, (ROHM), ROHS | 3 | D20, D21, D33 |
| 24 | 103-HSC277-R01 | Chip diode / Waveband switch,HSC277 (HITACHI), ROHS | 2 | D2, D19 |
| 25 | 103-HVC376-R01 | Chip variable capacitor diode / HVC376B, ROHS | 12 | D1, D4, D5, D6, D14, D16, D17, D18, D27, D28, D29, D30 |
| 26 | 103-HZU5AL-R01 | Chip Voltage regulator diode / HZU5ALL (HITACHI), ROHS | 1 | D7 |
| 27 | 103-RB706F-R01 | Chip switch diode / RB706F-40, S0T-323, ROHS | 3 | D9, D10, D25 |
| 28 | 103-SM3MA1-R01 | diode / DSM3MA1, ROHS | 1 | D34 |
| 29 | 104-A144EE-R01 | Chip transistor / DTA144EE (ROHM), ROHS | 4 | Q23, Q29, Q35, Q36 |
| 30 | 104-C144EE-R01 | Chip transistor / DTC144EE (ROHM) , ROHS | 14 | $\begin{aligned} & \text { Q9, Q10, Q17, Q22, Q24, Q25, Q27, Q28, Q37, Q42, Q43, Q44, } \\ & \text { Q47, Q50 } \end{aligned}$ |
| 31 | 104-KRC404-R01 | Chip transistor / KRC404RTK, ROHS | 1 | Q41 |
| 32 | 104-SA1641-R01 | Chip transistor / 2SA1641 (S. T), ROHS | 1 | Q39 |

| 218 | 114-07E470-R02 | Chip Wire inductor / C2012C-47NG, 47nH $\pm 2 \%$, 0805, ROHS | 1 | L58 |
| 219 | 114-07E560-R02 | Chip Wire inductor / C2012C-56NJ, $56 \mathrm{nH} \pm 5 \%$, 0805, ROHS | 1 | L55 |
| 220 | 114-08E103-R01 | Chip inductor / FSLM2520-100J, 10uH $\pm 5 \%$, 1008, ROHS | 1 | L40 |
| 221 | 114-08E471-R01 | Chip inductor / FSLM2520-R47K, 470nH $\pm 10 \%$, 1008, R0HS | 1 | L49 |
| 222 | 114-08E821-R01 | Chip inductor / FSLM2520-R82K, 820nH $\pm 10 \%$, 1008, R0HS | 1 | L50 |
| 223 | 115-3R0110-R01 | Chip air-cored coil / 0.9*3. $0 * 11 \mathrm{TR}$, positive, high pin, ROHS | 1 | L19 |
| 224 | 115-3R05R0-R05 | Chip air-cored coil / 0.9*3. $0 * 4.5$ TR, positive, ROHS | 4 | L9, L10, L11, L79 |
| 225 | 115-3R06R0-R02 | Chip air-cored coil / 0.9*3. $0 * 6 \mathrm{TR}$, positive, high pin, ROHS | 2 | L18, L28 |
| 226 | 117-000000-R05 | Chip bead / EMI, FILTER, SMT, BLM21P300S, 0805, R0HS | 3 | L64, L72, L77 |
| 227 | 117-000000-R07 | Chip bead / EMI, FILTER, SMT, BLM41P600SPT, 1206, R0HS | 2 | L25, L26 |
| 228 | 117-000000-R08 | Chip bead / EMI, FILTER, SMT, BLM11A601S, 0603, R0HS | 21 | L1, L4, L22, L23, L24, L32, L33, L39, L51, L59, L60, L61, L65, L66, L67, L69, L70, L74, L75, L76, L78 |
| 229 | 119-060104-R01 | Thermistor / NTH5G16P42B104K07TH, 100K, 0603, R0HS | 2 | R90, R138 |
| 230 | 120-100000-R39C | PT8200 Power Line with LV-2A jack, Length=3000mm, ROHS | 1 |  |
| 231 | 120-100000-R42A | PT8000/PT8100 Power Line Unit main, with LV-2A jack and SR, ROHS | 1 |  |
| 232 | 120-400000-R14 | black and white twisted-pair with jack, $2.0 * 2 \mathrm{P} * 70 \mathrm{~mm}$, ROHS | 1 |  |
| 233 | 120-400000-R15 | flat cable / 0.5*34P*60mm, R0HS | 1 |  |
| 234 | 121-100000-R19 | Speaker / $16 \Omega, 7 \mathrm{~W}$, SANY0 , ROHS | 1 |  |
| 235 | 122-116M80-R01 | Chip TCX0 / DSA535SA, 16.8MHz $\pm 2.5 \mathrm{PPm}$, R0HS | 1 | X1 |
| 236 | 122-13M580-R02 | Chip crystal resonator / 3.58MHz, SMT-49, 30PPM, ROHS | 1 | X2 |
| 237 | 122-19M830-R01 | Chip crystal resonator/ 9. 8304MHZ-NX5032GA, ROHS | 1 | X3 |
| 238 | 124-020000-R08 | Chip connector / 086210034340 800, 34PIN, P=0.5mm, ROHS | 1 | CN4 |
| 239 | 124-050000-R16 | 3.5 mm MIC socket / MOTOROLA, PJ-D3027, DC30V0.5A, ROHS | 1 | J1 |
| 240 | 124-090000-R01 | Speaker socket / WCPW20-02, R0HS | 2 | CN2, CN3 |

## Appendix 3 Structural Parts List

| No. | Part number | Description | Unit | Qty. |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 201-008100-R01A | PT8100 Case Front/ ABS, Black, R0HS | pcs | 1 |
| 2 | 201-008100-R02A | PT8100 Knob Volume / ABS, Black, white sign, R0HS | pcs | 1 |
| 3 | 201-008100-R03A | PT8100 SR Power Line/ ABS, Black, R0HS | pcs | 1 |
| 4 | 201-008100-R04A | PT8100 Lens Display Window / PC, Transparent, R0HS | pcs | 1 |
| 5 | 201-008100-R05A | PT8100 Lens Led / PC, Transparent, R0HS | pcs | 1 |
| 6 | 202-008000-R03A | PT8000/8100 Washer Transmit Thermal / Rubber, Black, $3 * 7 * 15 \mathrm{~mm}$, HC240, ROHS | pcs | 1 |
| 7 | 202-008100-R01A | PT8100 Key Rubber / rubber, silkprint, R0HS | pcs | 1 |
| 8 | 202-008100-R02A | PT8100 Dustproof Cushion LCD/ Rubber, 45 degree, black, R0HS | pcs | 1 |
| 9 | 202-008200-R02A | PT8200 Plug Speaker Jack/ Rubber, Black, R0HS | pcs | 1 |
| 10 | 203-00618A-R08 | PT618A Handed Microphone Bracket/ with 2pcs Screw (SP4*16), R0HS | pcs | 1 |
| 11 | 203-007200-R08 | PT7200 Nut Volume Knob/ Cu, Zn-Plated, Black, R0HS | pcs | 1 |
| 12 | 203-008000-R01B | PT8000 Case Top / Al, Spray Black 0il, R0HS | pcs | 1 |
| 13 | 203-008000-R02B | PT8000 Case Bottom / Al, Spray Black 0il, R0HS | pcs | 1 |
| 14 | 203-008000-R03A | PT8000 Metal Plate/ SECC, Thk' s=1. 2mm, Spray Black 0il, R0HS | pcs | 1 |
| 15 | 203-008000-R04A | V8000 Assemble Bracket/ SUS304, Spray Black 0il, R0HS | pcs | 1 |
| 16 | 203-008100-R01A | PT8100 METAL DOME, R0HS | pcs | 1 |
| 17 | 203-008200-R03B | PT8200 Base Antenna / SL16-50KF-3, Plated Gold, R0HS | pcs | 1 |
| 18 | 203-008200-R05A | PT8200 Shield Cover Power Module/Cu, Ni-Plated, R0HS | pcs | 1 |
| 19 | 204-008000-R01A | PT8000 Dustproof Net Speaker/Black, R0HS | pcs | 1 |
| 20 | 204-008000-R02A | PT8000 Dustproof Strip Case Front Top/ with Tape, Black, R0HS | pcs | 1 |
| 21 | 204-008000-R03A | PT8000 Dustproof Strip Case Front Bottom/ with Tape, Black, R0HS | pcs | 1 |
| 22 | 204-008000-R04A | PT8000 Dustproof Case Al/ with Tape, Black, R0HS | pcs | 2 |
| 23 | 204-008000-R06A | PT8000/8100 Washer Sponge/ Sponge, $60 * 38 * 10 \mathrm{~mm}$, R0HS | pcs | 1 |
| 24 | 204-008200-R08A | PT8200 Film LCD Lens/ 0. 1mm PVC, ROHS | pcs | 1 |
| 25 | 204-008200-R10B | PT8200 Conductive Sponge/ $50 * 18.5 * 3$, with Tape, R0HS | pcs | 1 |
| 26 | 301-25050J-R01C | Screw/ M2. 5*5. 0, Black Zn-Plated, R0HS | pcs | 6 |
| 27 | 301-30060G-R01 | Screw/ M3. $0 * 6.0$, Black Zn-Plated, R0HS | pcs | 7 |
| 28 | 301-30250D-R01 | Screw/ M3. $0 * 25.0$, Black Zn-Plated, R0HS | pcs | 6 |
| 29 | 302-26060D-R01 | Screw/ SP2. 6*6.0, Black Zn-Plated, R0HS | pcs | 3 |
| 30 | 302-50160E-R01 | Screw/ SP5.0*16.0, Ni-Plated, R0HS | pcs | 4 |
| 31 | 303-30100G-R01 | Screw/ M3. $0 * 10.0$, with Flat and Spring Washer, Ni-Plated, R0HS | pcs | 5 |
| 32 | 303-40100D-R01 | Screw/ M4. $0 * 10.0$, with Flat and Spring Washer, Black Zn-Plated, R0HS | pcs | 4 |

Appendix 4 Accessories

| Item | Model | Specifications | External View |
