1. Precautions & Notice

1.1 Safety Precautions

- 1) Cleaning: Unplug the power cord from the AC outlet before cleaning the product. Use a damp cloth to clean the product. Do not use liquid cleaners or aerosol cleaners.
- 2) Heat sources: Keep the product away from heat sources such as radiators, heaters, stoves and other heat-generating products (including amplifiers).
- 3) For added protection for this television equipment during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna. This will prevent damage to the equipment due to lightning and power-line surges.
- 4) If an outside antenna is connected to the television equipment, be sure the antenna system is grounded so as to provide some protection against voltage surges.

- 5) An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power circuits, or where it can fall into such power lines or circuits. When installing an outside antenna system, extreme care should be taken to keep from touching such power lines or

circuits as contact with them might be fatal.

- 6) Ventilation-The vents and other openings in the cabinet are designed for ventilation. Do not cover or block these vents and openings since insufficient ventilation can cause overheating and/or shorten the life of the product. Do not place the product on a bed, sofa, rug or other similar surface, since they can block ventilation opening. This product is not designed for built-in installation; do not place the product in an enclosed place such as a bookcase or rack, unless proper ventilation is provided or the manufacturer's instructions are followed.

1.2Product Safety Notice

- 1) Many electrical and mechanical parts in this chassis provide special visual safety protection. The protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc.
- 2) Before replacing any of these components, read the parts list manual carefully.
The use of substitute replacement parts, which do not have the same safety characteristics, as specified in the parts list may create shock, fire or other hazards.

1.3 Service Notes

- 1) When replacing parts or circuit boards, wrap the wires around terminals before soldering.
- 2) Keep wires away from high temperature components.
- 3) Keep cable and their shielding in their original position so as to reduce interference.

2. Specifications

Specification

V23DXXX

ITEMS		SPECIFICATION
Display	Screen size	23" wide TFT-LCD panel
	Aspect Ratio	15 : 9
	Resolution	1280 x 768 (WXGA)
	Contrast ratio	400:1(typ)
	Brightness	450cd/m ² (typ)
	Viewing Angle	Over 170° (Hor.) / 170° (Vert.)
	OSD Language	Chinese , English, French , German , Spanish
TV I/P	TV standard (CCIR)	NTSC
	TV Turning system	PLL 181 Ch.
	STEREO	MTS+SAP
	CATV	125 CH.
Video I/P	Composite Signal	CVBS
	Y, C Signal	S-Video
	Composite Signal Y, Pb Pr	HDTV system (720p, 1080i)
PC I/P	Signal I/P	DVI-I Connector
	PnP compatibility	DDC / 2B
	I/P Frequency	Analog : F _H : 31.5KHz to 60KHz F _V : 56Hz to 75Hz
	Recommended	Analog : 1024X768 (60Hz)
Audio I/P	Audio I/P : L/Rx3	Audio 1 : CVBS & S-Video
		Audio 2 : Y, Pb, Pr
		Audio 3 : PC
Video O/P	Composite Signal	TV only
Audio O/P	Audio O/P : L/Px3	Speaker (Build-in) : 5W+5W (rms)@THD<10%
		3.5mm miniature stereo phone jack
		Sound level output: : 500 mV(rms)
Other Functions	PIP,VoV,3D De-interlace, 3D comb-filter ,V-Chip, C.C. Settings	Yes
	Aspect Ration Switching	Normal → Periscope → Zoom →Full
Power	Power Supply	AC 110V ~ 240V, 50/60Hz
	Power Consumption	<115W
Wight (net)	10.3Kg (Ref.) (Without Accessories)	
Accessories	Remote Control, Batteries, AC power cord	

V27DXXX

ITEMS		SPECIFICATION

3. Connection & Applications

Note:

- **Audio out:** The level of Audio O/P is constant. It won't be affected by aligning volume, treble and bass. This connector should be connected to outer audio amplifier to enlarge the volume.
- **Video O/P:** When user wants to connect Audio and Video O/P of our LCD-TV to VCR for recording program, the O/P has only one choice that is TV mode.
- **Audio O/P:** IF the main display is TV, the Audio O/P must be TV sound; otherwise, if sub display is TV, the Audio I/P must be selected to "Sub", so that the Audio O/P will be TV sound.

4. Control Location

These buttons control your TV's basic features, include the on-screen menu. To use the more advanced features, you must the remote control.

- POWER: turn on or turn off the LCD TV.
SOURCE: set up the input source (PC, VIDEO, SV, TV, CV).
MENU: display the main menu.
CHANNEL (down/up): change channels on sequence.
VOLUME(+/-): turn up or turn down the volume.
ASPECT RATIO: set up the display (Normal, Periscope, Zoom or Full).

Remote sensor window

Aim the remote control towards this region on the TV.

5. Remote Control

The remote control pad works almost as same as ordinary TV remote control that includes the basic function needed while viewing a live video:

Summary of Control Button

Power control	
Press POWER button	Direct to turn on or turn off the display
Selecting the signal source	
Press TV button	Direct to switch to the TV mode.
Press AV button	Direct to switch to the AV Video mode.
Press SV button	Direct to S-Video mode.
Press CV button	Direct to switch to the Component mode (Y Pb Pr).
Press PC button	Direct to switch to the PC mode.
Menu Setting	
Press MENU/ENTER button	Display the main on-screen menu or enter the next menu.
Press TITLE/EXIT button	Display the current channel digits/Exit from the menu.
Changing Channels	
Press UP button	Press Up to change channel on the TV.
Press DOWN button	Press Down to change channel on the TV.
Press 0~9 , +100 button	To select channels directly on the TV.
Press RETURN button	Return to the previous channel on the TV.
Sound Control	
Press VOL+ button	Press to turn up the volume.
Press VOL- button	Press to turn down the volume.
Press MUTE button	Press to temporarily cut off the sound.
Press MTS button	Press to choose stereo, mono or separate audio program supply the multi-channel sound services.
Press AUDIO button	Select present audio is main display or sub display.
Press TREBLE button	Adjust the treble of audio.
Press BASS button	Adjust the bass of audio.
Press SUBWOOFER button.	Open the subwoofer function.
PIP Control	
Press ON/OFF button	Press to watch one of video sources on sub display. Press again to make the sub display disappear.
Press TV 、 AV 、 SV 、 CV button	Press to select one of the PIP window input source.
Press SIZE button	To make the PIP window double, large or small.
Press POSITION button	Press to move the PIP window to : Top Left→Top Right→Bottom Right→Bottom Left→Repeat
Other Function	
Press SWAP button	Change main display and sub display.
Press RESET button	Return to the original factory settings.
Press ARC button	In PC source : Set the picture window to full or normal. In Video source : Set the picture window to normal→full→periscope→zoom.
Press APC button	Select Normal, Clear, Dark, and Theater mode for picture control.
Press SLEEP button	Press to select a present time interval for shut off.
Press V-CHIP button	Set Parent Control function.
Press C.C button	Set the caption of TV programs show on or off.
Press ADD button	Add the channel of TV programs in TV source.
Press ERASE button	Erase the channel of TV programs in TV source.

6. Disassembly Instructions

A. Face down the LCD-TV :

Face down the LCD-TV on a smooth plane with a soft material to protect the panel faceplate.

B. Base Neck Removal Procedure :

1. Remove 2 screws from Neck Cover. (Indicated as “ A “)

Then you could take the Back Cover of neck apart from the LCD-TV

C. Base Removal Procedure:

1. Remove 4 screws from the Back Cover. (Indicated as “ B ” and “ C ”)

Then you could take Base (assembly) apart from the LCD-TV.

D. Tuner Cover & AV Cover Removal Procedure:

1. Remove Tuner Cover. (Indicated as “D”)
2. Remove AV Cover before, you should be loose the screw (Indicated as “E”)

E. Back Cover Removal Procedure:

1. Remove 8 screws from the Back Cover. (Indicated as “ F “and “ G “)
2. Remove a screw from the Tuner Board. (Indicated as “ I ”)
3. Take slide of tuner board.

Then you could take Back Cover apart from the LCD-TV.

F. Right/Left Side Covers and Tuner Board Removal Procedure:

- 6.1 Remove 4 screws from Slide of AV PCB & left side Covers. (Indicated as “ H ”)
- 6.2 Remove a screw from the Tuner Board. (Indicated as “ I ”)
- 6.3 Remove 3 screws from the power case assembly. (Indicated as “ J ”)

Then you could take Slide of AV PCB, Power case, and Left Side Covers Removal.

G. Main PCB Shield Removal :

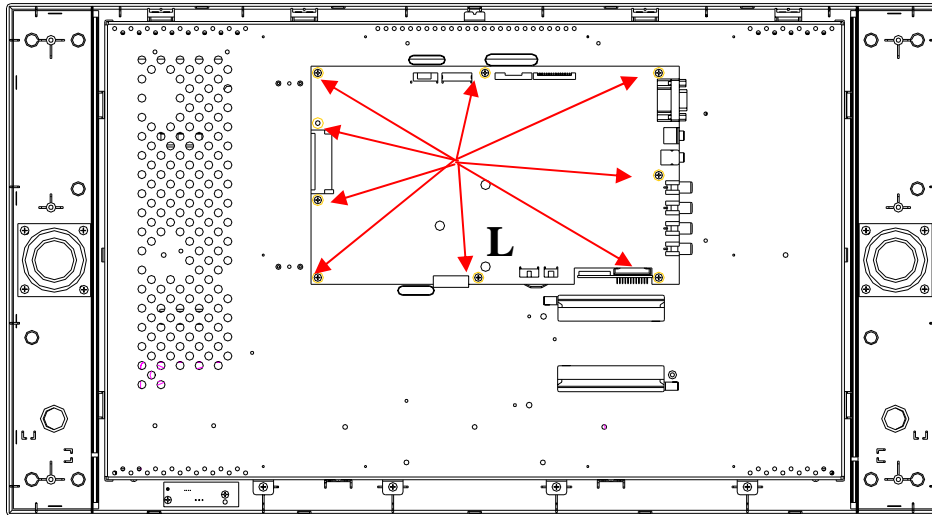

1. Remove 2 screws from Main PCB Shield. (Indicated as “ K ”)

Then you could take Main PCB Shield apart from Main Bracket and the PCB Board will be shown on it .

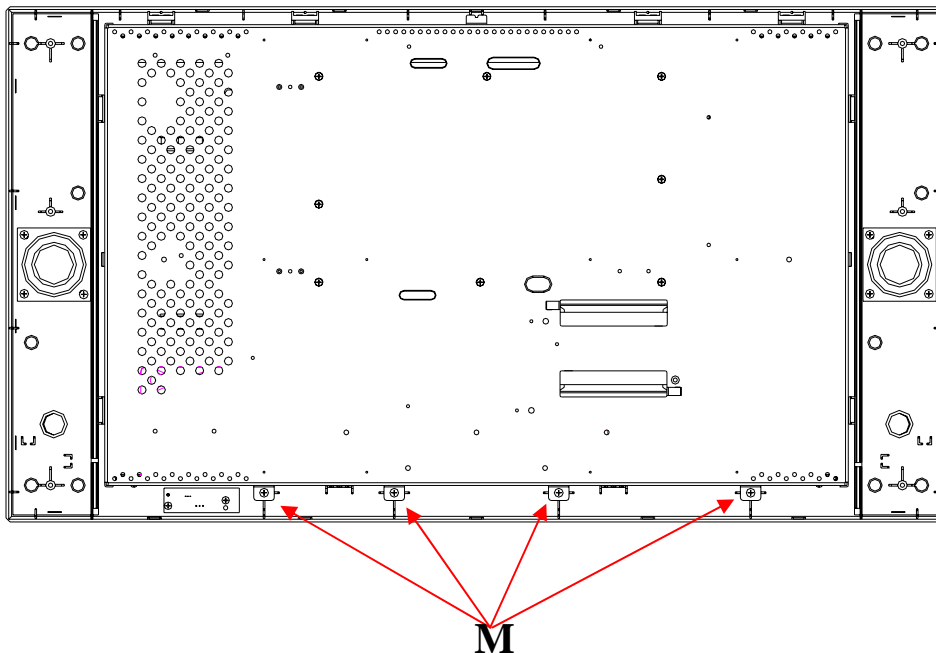

H. Main PCB Removal procedure:

1. Remove 9 screws from the Main PCB. (indicated “ L “)
Then you could take Main PCB apart from the LCD-TV .

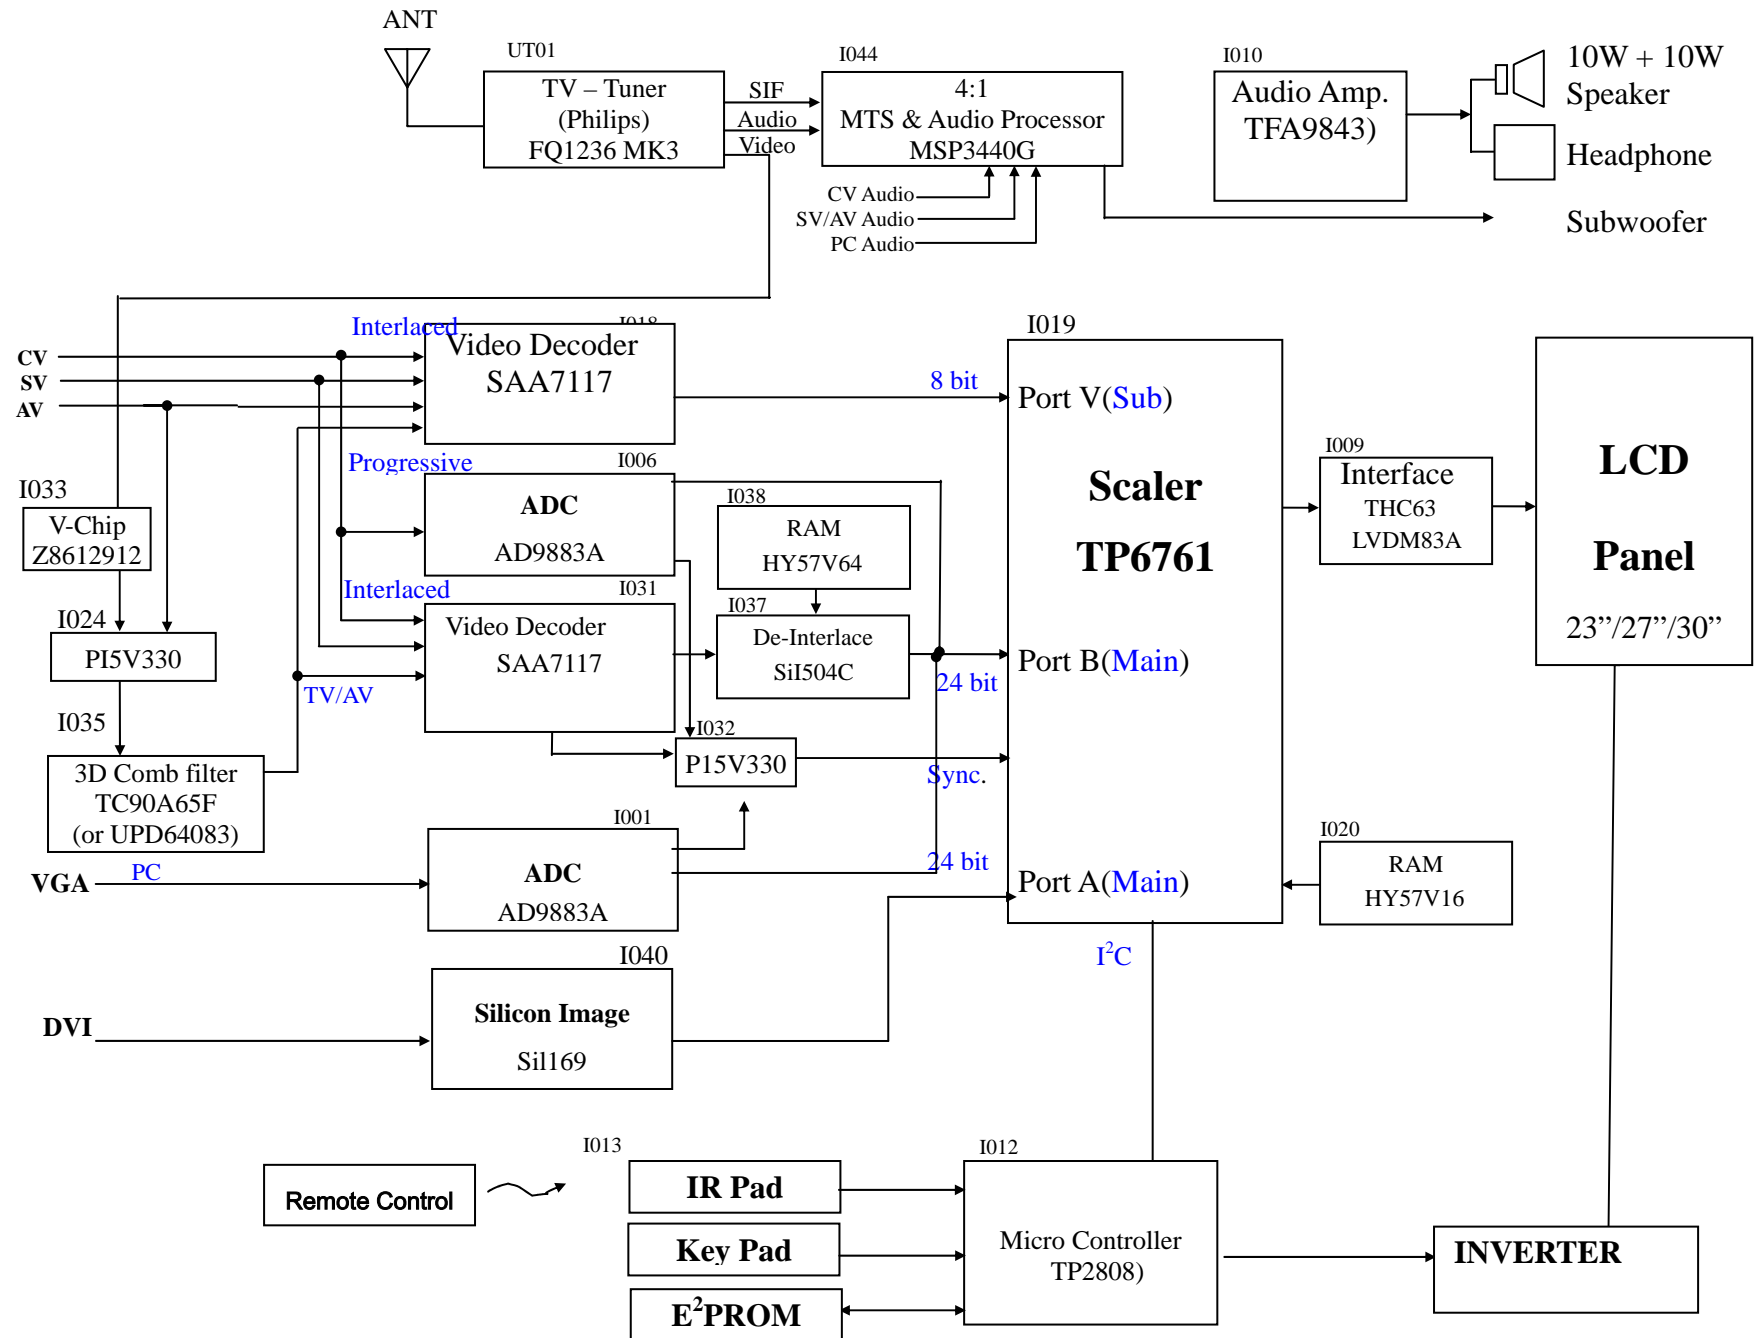

I. Panel Bracket Removal procedure:

1. Remove 4 screws from the Panel Bracket. (Indicated as “ M ”)
Then you could take Panel Bracket apart from the Front Cover.

7. Block Diagram

8. Troubleshooting

8.1 Symptom Codes :

	CODE	SYMPTOM	COUNTERMEASURES
No picture and no Sound	NP1	No Picture and No Sound in TV mode.	<ul style="list-style-type: none"> ● Make sure the Power cord and Antenna cable are properly connected . ● Make sure the batteries in remote control are not flat. ● Switch to TV source by pressing TV button. ● Select the correct signal source: “ANT” or “STD/HRC/ IRC” in OSD menu. ● Run “Auto Scan” in OSD menu.
	NP2	No Picture and No Sound in video mode.	<ul style="list-style-type: none"> ● Check the connection between the optional video equipment and the TV. ● Press AV, SV, or CV button on the remote control to select the corresponding video source.
	NP3	TV is automatically turned off.	<ul style="list-style-type: none"> ● Check if the “SLEEP” timer is activated . ● Press POWER button to turn on the TV once again.
	NP4	Screen appears “ totally snowy ” in TV mode. After 10 min., it turns off automatically.	<ul style="list-style-type: none"> ● Check if Aerial cable is correctly connected. ● Press POWER button to turn on the TV again. ● Press CH Up/Down buttons to change channels.
	NP5	Screen appears “ No Signal ” in video mode. After 10 min., it turns off automatically.	<ul style="list-style-type: none"> ● Check if Video Cable is correctly connected and Video Device is normal. ● Press POWER button to turn on the TV again. ● Press AV, SV, or CV button on the remote control to select the corresponding video source.
Poor Picture	PP1	Double Images / Ghosts	<p>If the TV suffers interference from signals reflecting from mountains or buildings , double-pictures or Ghosts will occur.</p> <ul style="list-style-type: none"> ● Adjust the Antenna’s location and direction ● Replace it with one with better directionality. ● Turn off or disconnect the booster if it is in use , as the booster may be inappropriate.
	PP2	Snowy picture and noisy Sound	<p>If snow totally blocks out the picture , there may be a problem with the Antenna or Antenna Cable .</p> <ul style="list-style-type: none"> ● Have the TV and Antenna been connected properly ? Has the Antenna cable been damaged ? ● Is the Antenna pointing in the right direction ? ● Is the Antenna itself faulty ? ● Try using a booster , as signal transmission may be low.
	PP3	Distorted picture and noisy sound	<ul style="list-style-type: none"> ● Turn off or disconnected the booster if it is in use , as broadcast signals may be too strong.
	PP4	Dotted Lines / Stripes in the picture.	<p>If the TV or Antenna suffers interference from other equipment , stripes or noise may appear in the picture.</p> <ul style="list-style-type: none"> ● Keep the TV away from noise sources such as personal computer , amplifier , cars, motorcycles or hair-dryers. ● If the aerial suffers interference from a radio tower or high-voltage wire , contact the local dealer.

	CODE	SYMPTOM	COUNTERMEASURES
Poor Picture	PP5	Stripe noise.	<ul style="list-style-type: none"> ● Check the coaxial cable connected with the TV is not oxidized ● Do not use 300 ohm twin lead cables as interference may occur ● It is recommended to use a 75 ohm coaxial cable (not supplied) to get premium quality picture. ● Keep the aerial cable away from other connecting cables.
	PP6	No color, too light or too dark	<ul style="list-style-type: none"> ● Adjust the picture settings — APC, Brightness, Contrast, Saturation , Color Temp. ● Press RESET button on remote control to return all settings to factory settings.
	PP7	Poor picture on particular channel.	<ul style="list-style-type: none"> ● Use “Fine Tune” in OSD to manually adjust a particular channel for optimal reception.
No Sound or Noisy Sound	NS1	Good picture, no sound	<ul style="list-style-type: none"> ● Make sure the headphone is not connected. (option) ● Check audio connections between Equipment & LCD-TV. ● Press MUTE or VOL Up to cancel the muting.
	NS2	Noisy noise	<ul style="list-style-type: none"> ● Make sure that the antenna connected is 75 ohm coaxial cable (not supplied) , not 300 ohm twin lead cables . ● Keep the antenna cable away from other connecting cables. ● Press MTS button to select “Mono” which will reduce the noise. ● Adjust BASS or TREBLE properly on remote control.
PC	PC1	PC display is Not Full Screen	<ul style="list-style-type: none"> ● Select “Auto Image” in OSD menu to optimize the image . ● If executing Auto Image Adjust still can not achieve full screen display, adjust “V. Position” and “H. Position” in PC mode
	PC2	Horizontal Noise or Color pattern is not uniform	<ul style="list-style-type: none"> ● Select “Auto Image” in OSD menu to optimize the image . ● If still no good , adjust “Phase” in OSD menu
	PC3	“Out of Range” message	<ul style="list-style-type: none"> ● Maximum PC resolution supported is 1280x768 , so the screen will appear “Out of range” at higher resolution. ● Reduce the resolution to 1280x768 from the PC. <p>Note 20” panel resolution is 640 x 480.</p>
	PC4	No Sound	<ul style="list-style-type: none"> ● Make sure PC audio Input is well connected.
	PC5	After “No Signal ” has appeared on PC mode for a while, the view disappears and the LED Indicator turns from Green to “Amber” .	<ul style="list-style-type: none"> ● Press any key on keyboard or move the mouse to activate the PC , because the PC may go to power saving status. ● Check if the D-sub or DVI connector (Cable) is disconnected or loose.

	CODE	SYMPTOM	COUNTERMEASURES
Remote Control	RC1	Remote Control does not work	<ul style="list-style-type: none"> ● Make sure the batteries in remote control are not flat ● Check the polarity of the batteries ● Use the remote control in the front of the TV or from less than seven meters away. ● make sure the Remote Sensor Window is not under strong lighting.
	RC2	Can not change channels with the remote control	<ul style="list-style-type: none"> ● Press TV button to switch to TV mode.
Picture Halt / Abnormal	PH1	Picture suddenly Stops Responding or abnormal .	<ul style="list-style-type: none"> ● Press RESET button on remote control . ● Unplug and then plug the Power Cord of the TV from the AC outlet.
	NG1	Issues can't be solved.	<ul style="list-style-type: none"> ● If the picture still abnormal, execute “ Clear EEPROM”. <p><u>STEPS :</u></p> <ol style="list-style-type: none"> 1. Press POWER key to turn off the LCD-TV. 2. Press CH▽ key, then press Power key of remote control to turn on the LCD-TV, after 3 seconds, then release CH▽ key. 3. When「 INITIAL EEPROM 」appears on the screen, on the INTTAL EEPROM is complete. <p>Note : Remind user that every setting will return to factory preset mode including PIN of parental control (PIN :1234), channel setting.</p>
Note	<ol style="list-style-type: none"> 1. CV and PC including D-sub or DVI modes, are not available on Sub-display of PIP . 2. If main display is CV , PIP mode is not available. 		

8.2 Troubleshooting Flow Chart

(1) Power Start NG

(2) Picture abnormal

Steps to clean EEPROM

1. Press POWER key to turn off the LCD-TV.
2. Press CH▽ key, then press Power key of remote control to turn on the LCD-TV, after 3 seconds, then release CH▽ key.
3. When 「 INITIAL EEPROM 」 appears on the screen, on the INTTAL EEPROM is complete.

Trouble Shooting

1. MCU platform using Topro TP2808
2. Label : V30DMBT-U21

WBK	→Custom
V30D-U21	→Model NO.
MP 1.1	→Edition

3. Check Sum : 3E86H
BIOS Version : V30DMBT-U21 WBK-MP 1.1 12/21/04
EEPROM INITIAL : Power + Channel Down
4. Enter Factory Mode : Power + Menu Key
5. Leave Factory Mode : Power off
6. Self – Test Mode (for Burn in) : Push Menu + Channel Up + Power ON 、 Key at same time, and then loose Power On Key first 、 Keep push Menu and Channel Up Keys for 2 seconds 、 test pattern will appear on the screen(Self-Test Mode can't be disable by disconnecting Power Supply, it must thru. Power Key).
7. Disable Self-Test Mode : Push Power Off/On Key

9. Electronic Circuit Description

9.1 Main Board Circuit

(1) DVI-I signal

Refer to circuit diagram of PWB-0812

The analog RGB video input signals are supplied through the DVI-I cable which is terminated at P022. These three input signals are approximately 0.7Vpp in amplitude.

R374、R301 and R327 give resistance of 75Ω respectively for impedance matching. These R、G、B video signals are ac coupled via 0.047U capacitor C021、C016、C013 and then fed into the I001 AD converter (MST9883C) at Pin54、49 and 43 respectively. These analog R、G、B video signals are converted to the their digital forms in I001. The outputs of digital data including 8 bits red、8 bits green、8b bits blue signals are assigned at Pin70 ~ 77、Pin 2 ~ 9 and Pin 12 ~ 19 of I001, and applied to Port A of I019 (Scaler: TP6761) Hsync & Vsync are applied to I001 (MST9883C) #30 & #31 and the processed signal taken from #66 & #64 are fed into I019 (TP6761) #18、#19..

CLK signal is taken from I001 (MST9883C) #67 and applied to I019 (TP6761) #156. The LCD-TV is designed to have the DDC/2B FUNCTIONS. Communication between the LCD-TV and computer for DDC is via P022 (DVI-I connector) #20、#21 which are defined as SCL、SDA signals. The computer will read out the EDID from the I011 (EEPROM) and the EDID data is written into the EEPROM in the factory during production.

The digital input signal through DVI-I cable which is terminated at P022. Input signal from TMDS low voltage differential signal input data pairs Pin 80、81、85、86、90、91 and TMDS signal input clock pairs 93、94 are fed into I040 (SiI 169).

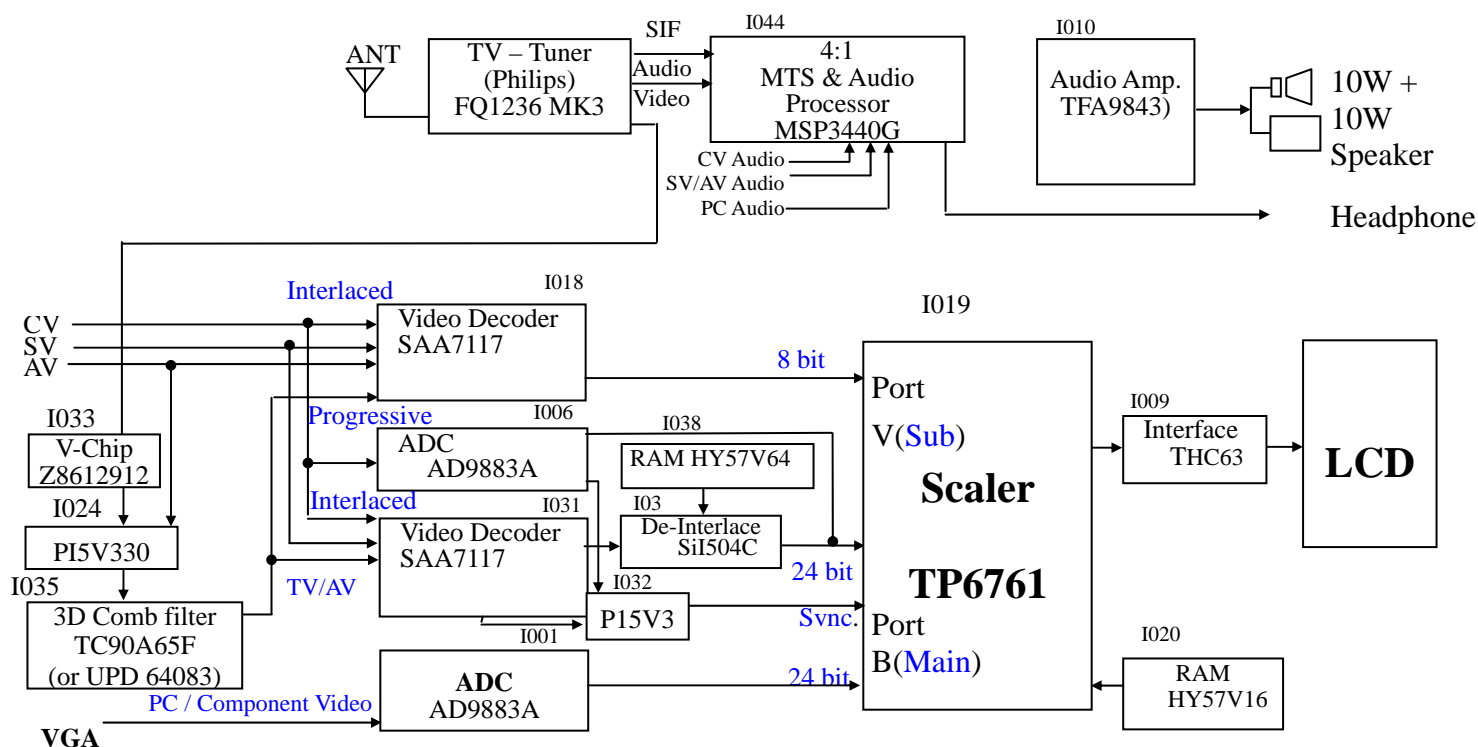

The I040 (SiI 169) supports High-bandwidth Digital Content Protection (HDCP) by decrypting the pixel data stream received from an HDCP transmitter in the video host system. HDCP provides a secure method of delivering high-definition content between a host (such as a set-top box, DVD player, or D-VHS player) and display (such as an HDTV, projector, or A/V receiver).

The SiI 169 comes pre-programmed with a production set of HDCP keys in its internal EEPROM. In this way the keys are provided the highest level of protection as required by the HDCP specification.

(2) AV Signal

Refer to the page 8 in circuit diagram of PWB-0812.

V30DXXX / V27DXXX can process 4 different Video signals , including Composite Video (CVBS) 、Separate Video (S-Video) and Component Video (YUV). Component Video also includes two types Y Cb/Cr and Y Pb/Pr, and I018,I031 SAA7117 is 16 channels analog input. There are 4 A/D in it's I/O port, So it can match this model. Examples for different of input source signals are listed one by one as follow. (please refer to the circuit diagram) :

A. TV :

- i. TV signals enter from ANT to Pin#1 of UT01 FQ1236 MK3 Tuner. Pin #14 output Audio MPX signal, while Pin#12 output TV (CVBS) Video signal.
- ii. Audio MPX signal does MTS demodulation from I044 (I044 MSP3440G). It can output Audio signal including Mono 、 Stereo 、 Sap and so on. Then through I010 (Audio Power Amp) to Speaker.
- iii. After the Video signal to the V-Chip circuit (I025 NJM2244 、 I033 Z86129 、 I030 74HC126) to modulate it, output to I031 SAA7117 Video Decoder (Main) or I018 SAA7117 Video Decoder (Sub) circuit to do modulation and Video source exchanges for CVBS signal type. Then CVBS signal changes to the ITU-656 type by I031 or I018 and outputs to I019 Scaler to process. 8 Bit belongs to Data parts, and H sync, V sync, CLK directly connect to Pin#162、163、164 of Scaler. Then R、G、B signal respectively output six bits to panel.

B. CV (Y Pb Pr) :

Entering from P50 signal, then enters Pin#43、48、54 of AD9883 passed by the matching impedance resistor and capacitance. It converts to RGB signal of YUV by I006 and passes to Port B of I019 by six row-resistor RP08 ~ RP12. Then output to panel.

C. Audio :

The rest of Audio source all connect Audio Processor (I044 : MSP3440) to each left and right voice channels. Controlled by MCU (I012) and selected through I044, just output one source to Audio Power Amp (I010 : TFA9843) to Speaker.

(3)MCU

Microcontroller

Refer to circuit diagrams Sheet 5 of 11.

The microcontroller I012 Topro TP2808 is running with the clock based on 14.318 MHz by X003.

C127 and R096 constitute a reset circuit. It properly the necessary active high reset signal for I012 (Microcontroller) to operate properly. This reset signal is fed into I012 (Pin#10) to provide the necessary system reset for the proper operation of I012.

The signal IR- DAT (Pin#15 of I012) is used for Infrared Receiver. If the IR Received some signal, I012 will send interrupt signal by Pin #2、3 (MSDA、MSCL) to control any chip.

The signal designated AD0 ~ AD7 (Pin36 ~ 43 of I012) are data signal used for transferring data between I012 and I019.

The signal TXD and RXD (Pin#13、11 of I012) are used for debugging during firmware.

I013 (24LC16B) provides necessary non-volatile storage for system operating variables and parameters. It is controlled by I012 via MSDA and MSCL signal, which pulled-up to +5V voltage with R092 and R093 (10K Ω).

(4)Panel interface

Refer to circuit diagrams Sheet 6 of PWB-0812

The signals of panel interface are all from I019 to the LCD Panel.

The signal FVPCC (Pin#96 of I019) and MMTB3904 (Q003) control the +5V power to the LCD Panel.

The signals FPBACK and DVD0 (Pin#95、62 of I019) are used for the control of backlight's On / Off state and Panel luminance.

The signals SHFCLK、PDE、PVYSNC、PHSYC come from Pin#90 ~ 94 of I019, and then fed into P005. These four signals are used for panel image display controls.

Pin#A1BLU0 ~ 7 、 A1GRN0 ~ 7 、 A1RED0 ~ 7 and B1BLU0 ~ 7 、 B1GRN0 ~ 7 、 B1RED0 ~ 7 are data output from I019 to P005 and P802(to LCD Panel). They are buffered by LP02,LP04,LP06,LP08,LP10,LP12 and filtered associated capacitors. These outputs are organized into even and odd connectors, each with 18 bits.

9.2 Keyboard Circuit & IR Lens board

The keyboard and IR lens circuit are shown in chapter 10-3 of the circuit diagrams.

9.3 Inverter Circuit

The inverter board is fed with +24V through P802#1~#5 on Power module and offers 4.1ma (typical) to each lamp of backlight in LCD panel.

The brightness adjusted in OSD menu is to control the voltage at P802#11 while this voltage is offered by I019 (Scaler : TP6761)#62.

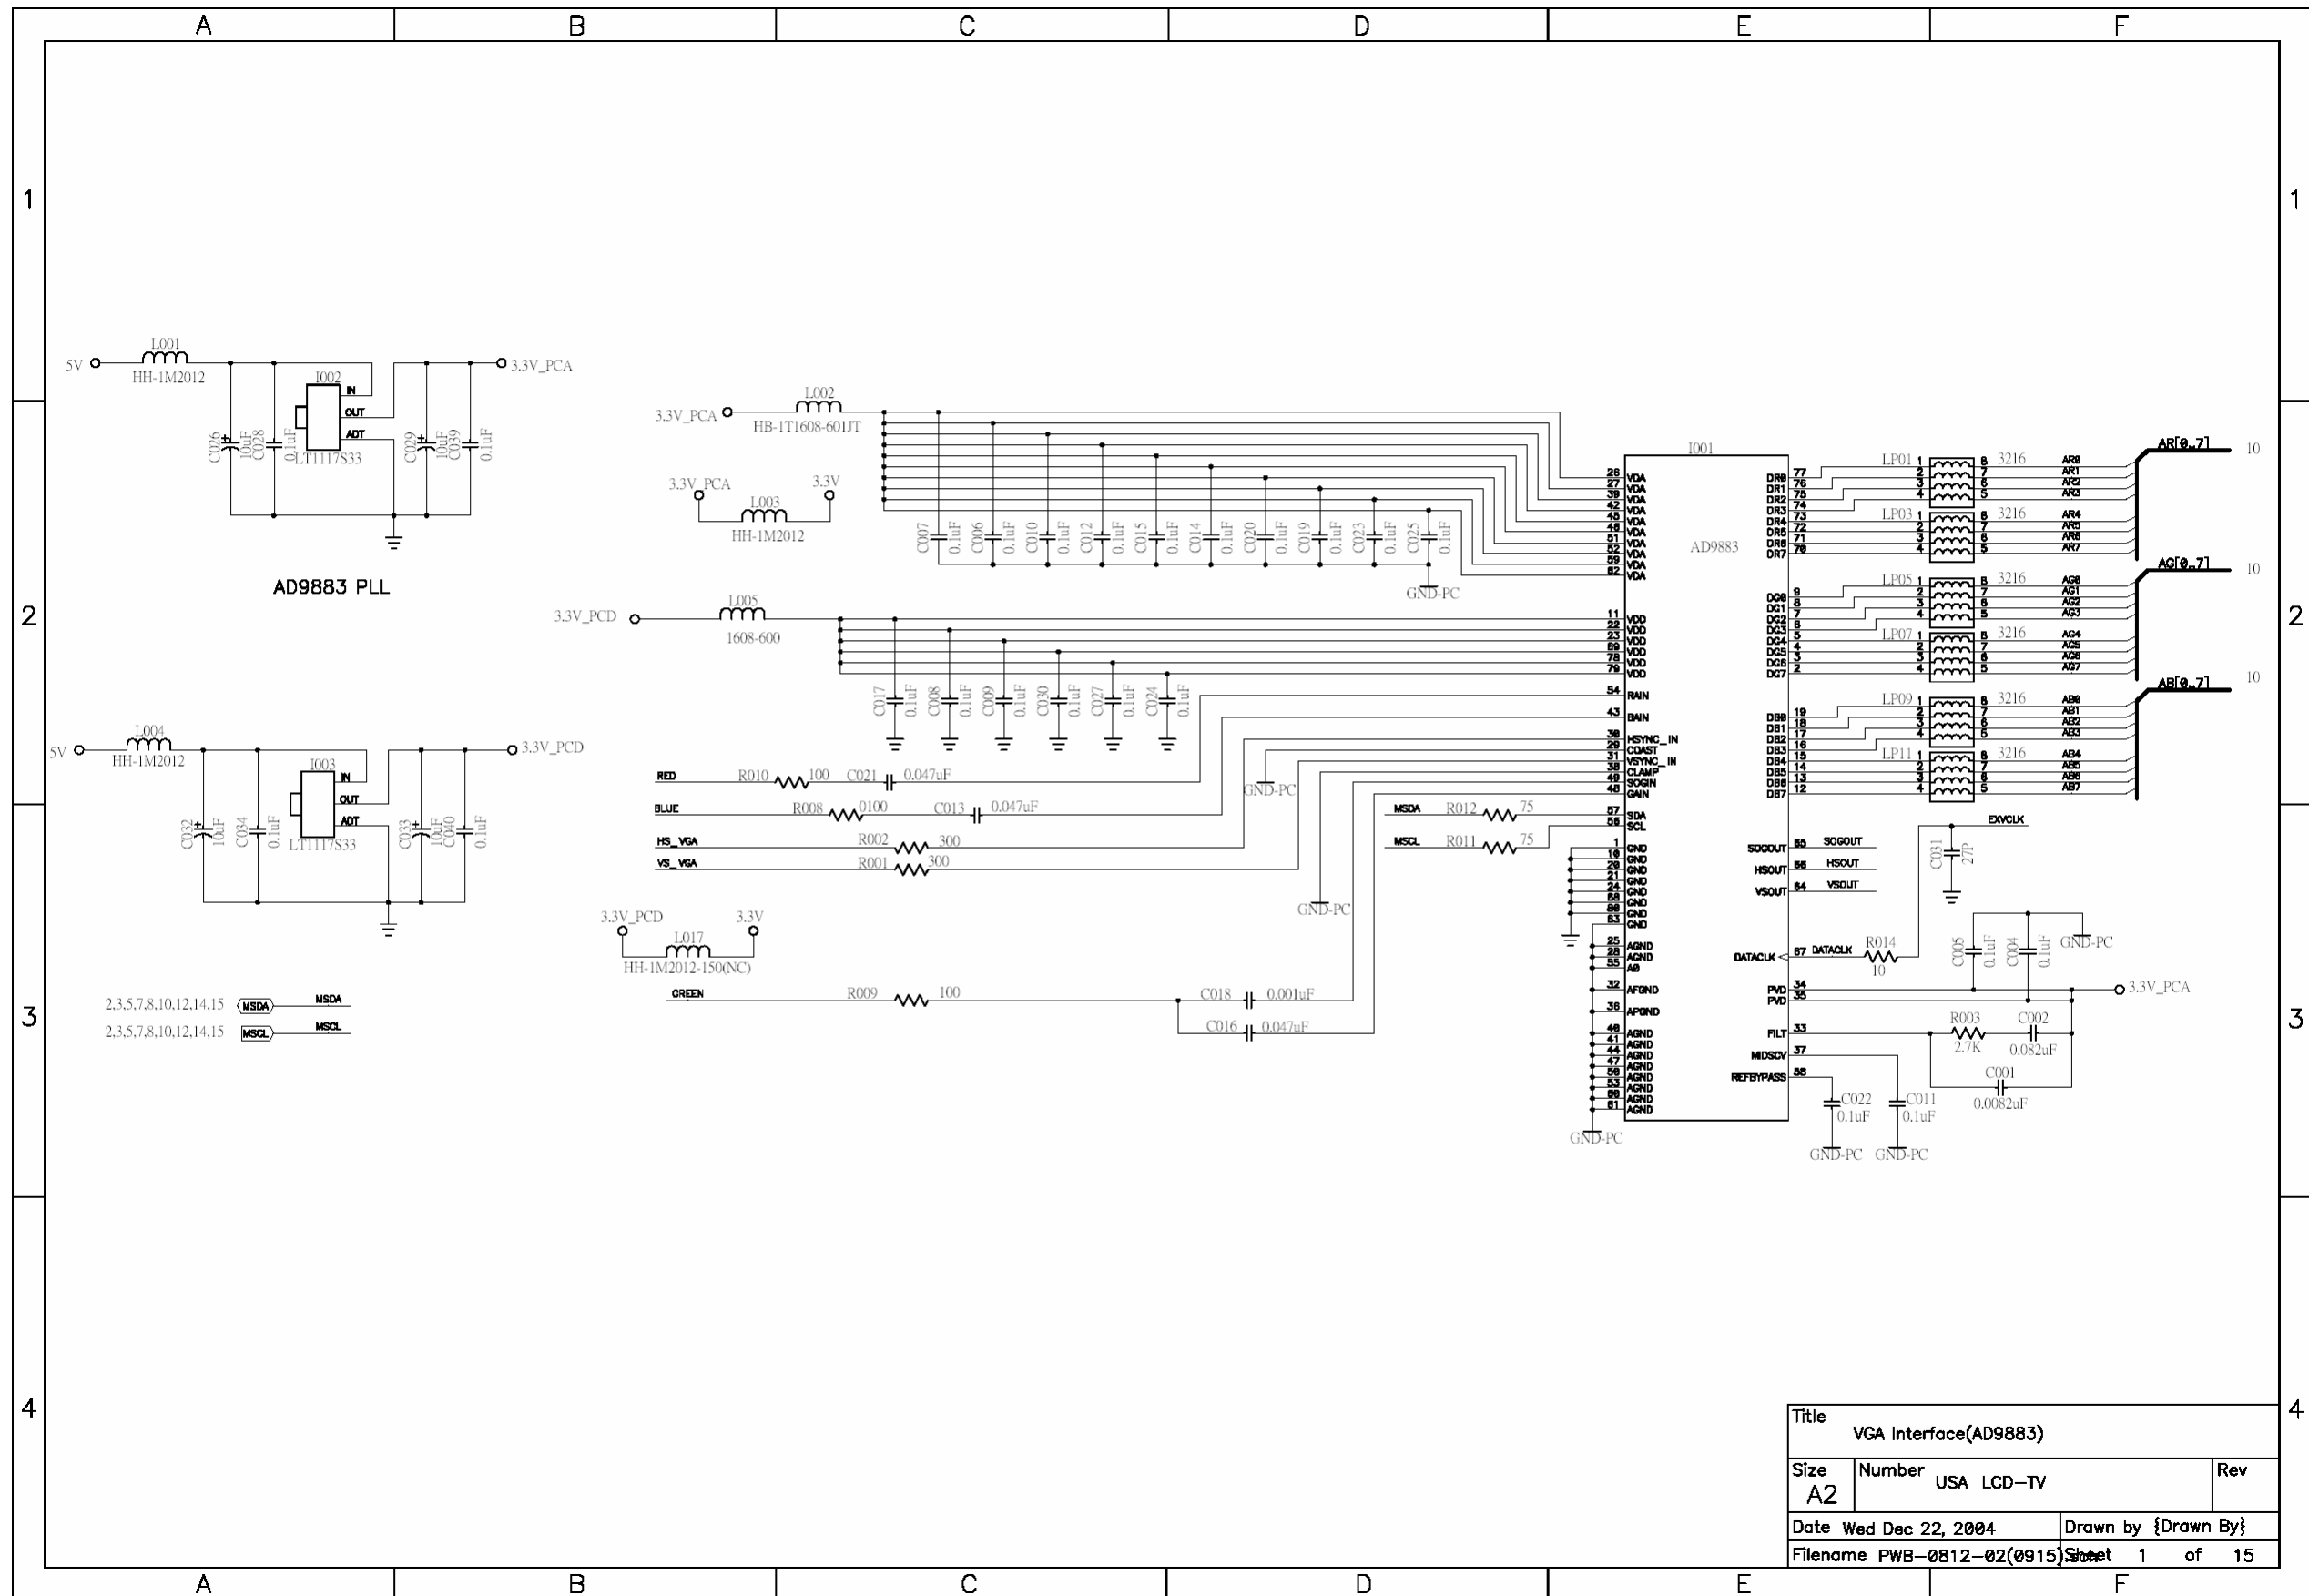

The range of the voltage is from 0V to 3.3V. If the voltage of P802#11 is 0V, the screen will get light; if it's 3.3V, the screen will get dim. It means that the different voltage will change the lamp current through the inverter to make the screen lighter or dimmer.

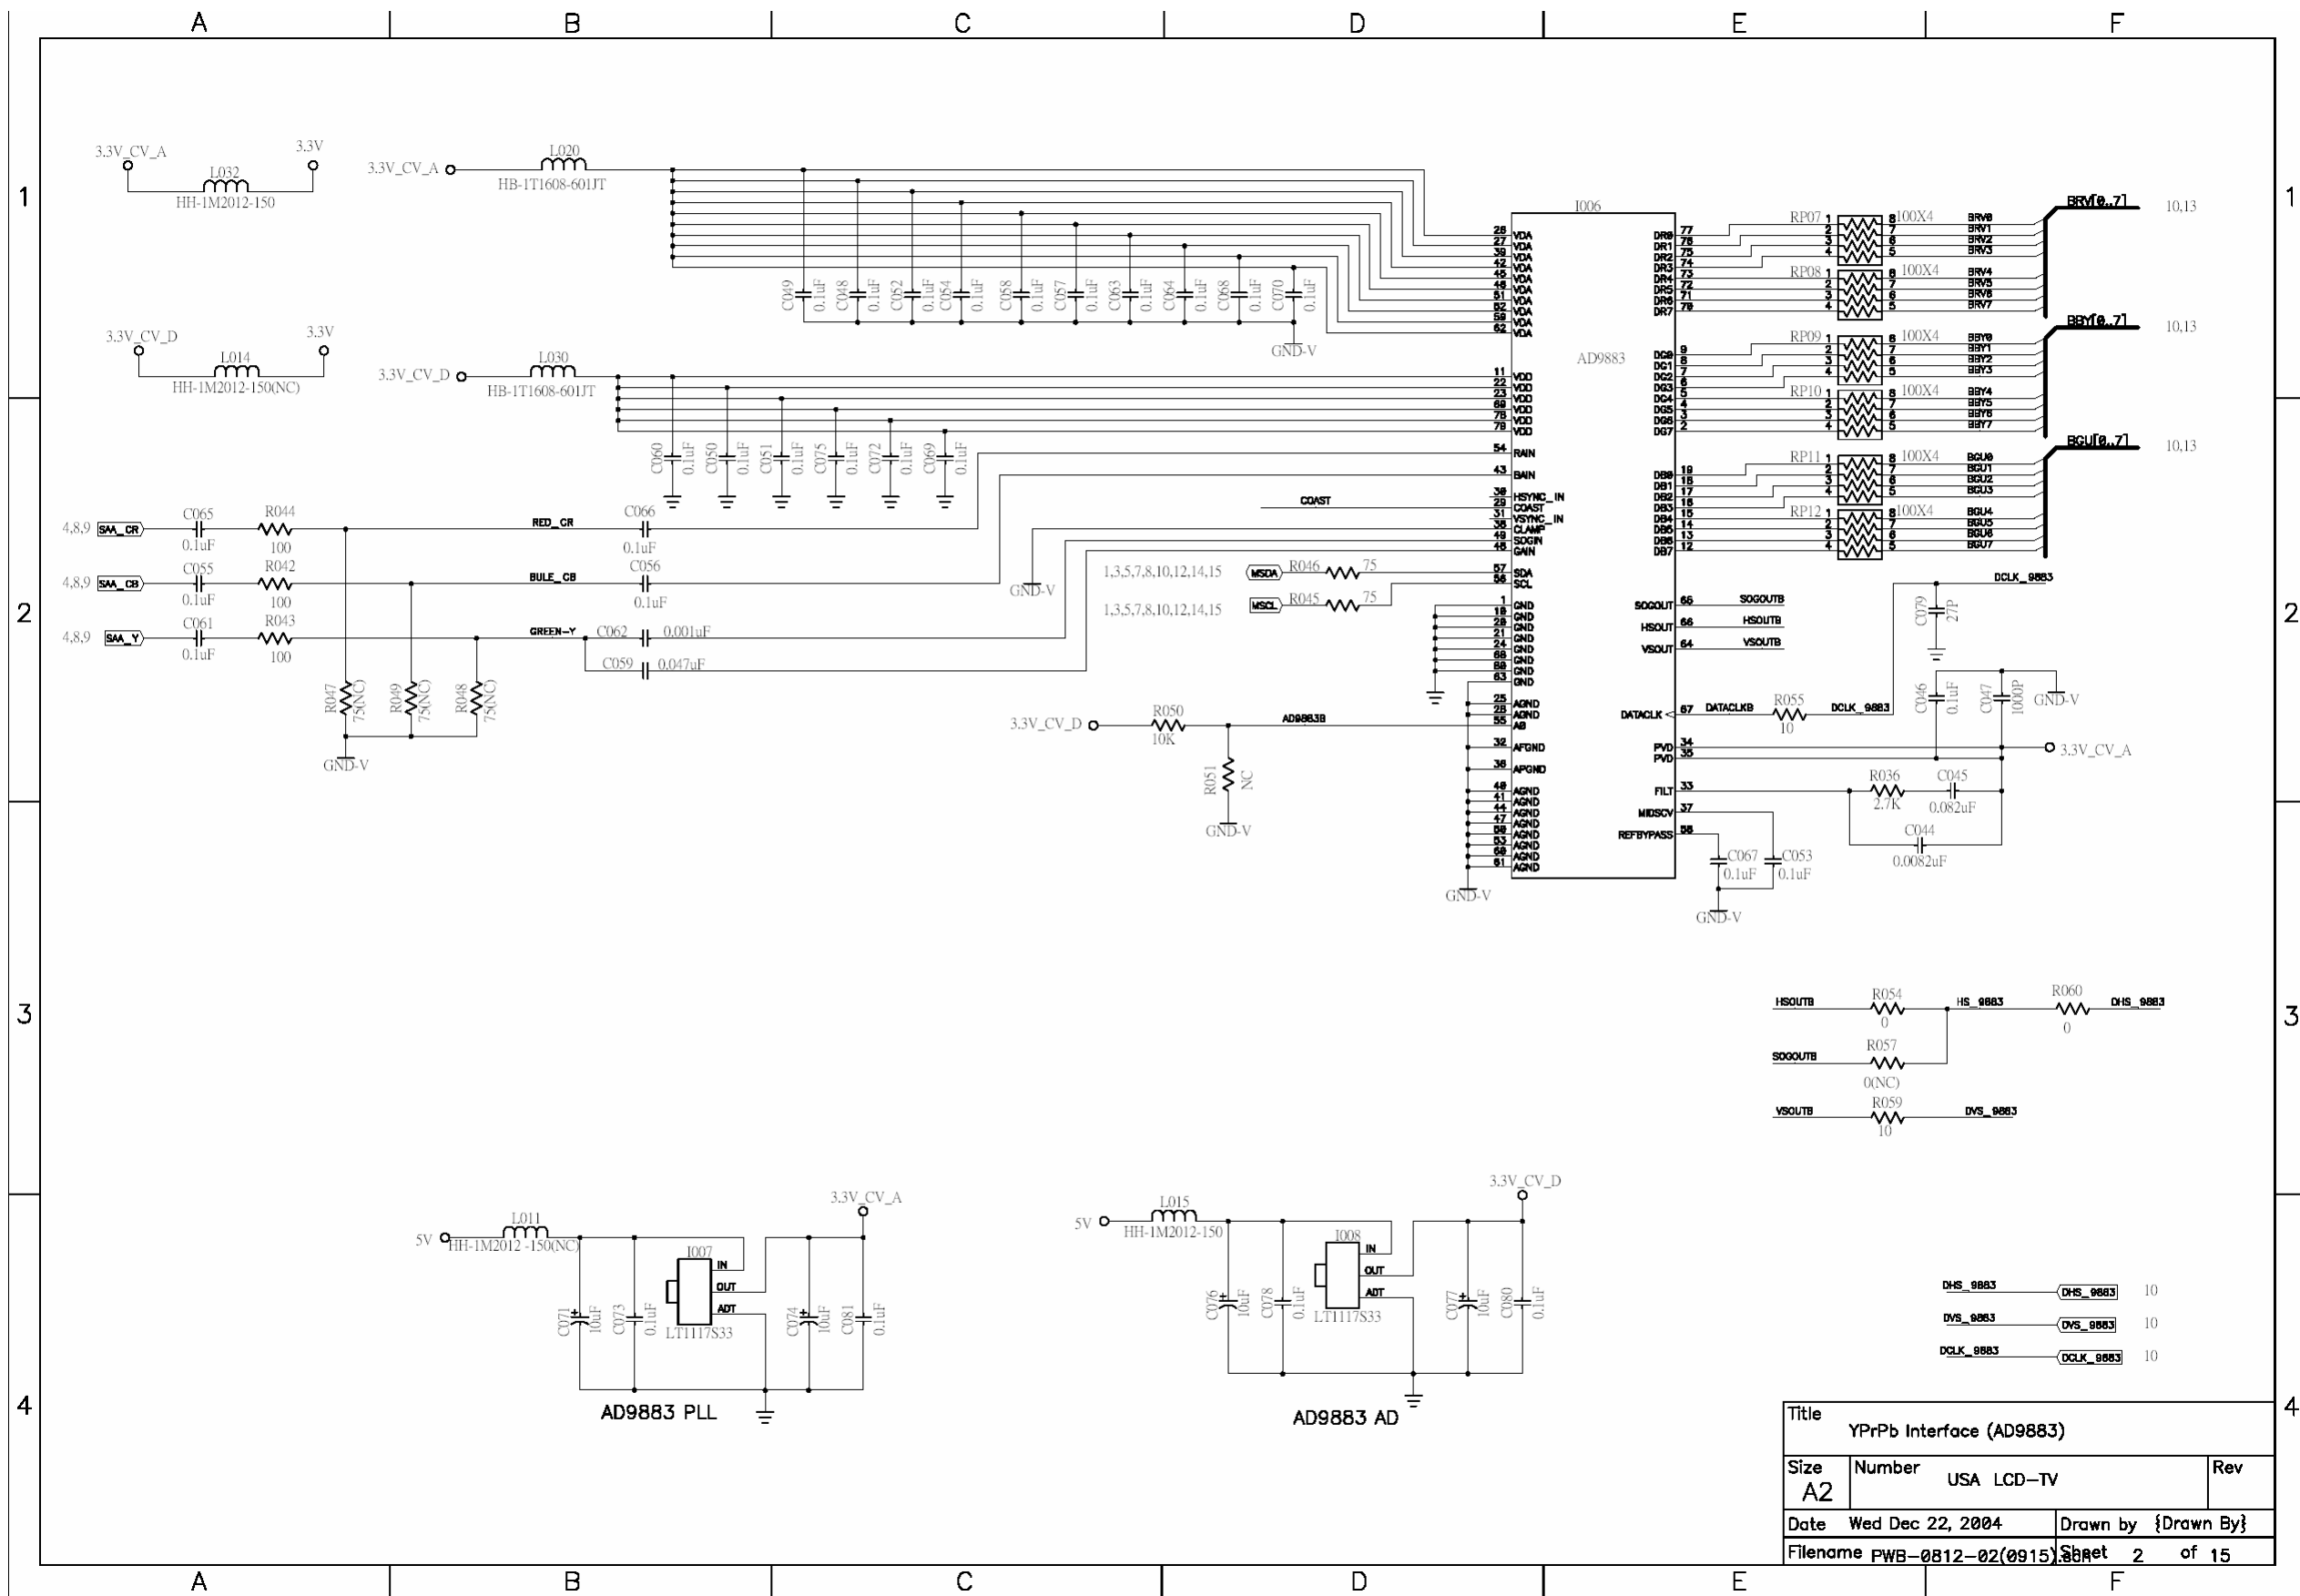

9.4 Power Module

The Power Module circuit shown in chapter 10-6. The Power Module provide +5V +24V though P802 for whole system.
