**Panasonic®**

Panasonic Industrial Company Division of  
 Matsushita Electric Corporation of America  
 One Panasonic way, Secaucus, New Jersey 07094.

## SAFETY PRECAUTIONS

### **1-1 CAUTION:**

No modification of any circuit should be attempted. Service work should only be performed after you are thoroughly familiar with all of the following safety checks and servicing guide lines.

### **1-2 SAFETY CHECK**

Care should be taken while servicing this CRT display because of the high voltage used in the deflection circuits. These voltages are exposed in such areas as the associated flyback and yoke circuits.

### **1-3 FIRE & SHOCK HAZARD**

- 1-3-1 Insert an isolation transformer between the CRT display and AC power line before servicing chassis.
- 1-3-2 In servicing pay attention to original lead dress especially in the high voltage circuit. If a short circuit is found, replace all parts which have been overheated as a result of the short circuit.
- 1-3-3 All the protective devices must be reinstalled per original design.
- 1-3-4 Soldering must be inspected possible for cold solder joints, frayed leads, damaged insulation, solder splashes or sharp solder points. Be certain to remove all foreign material.

### **1-4 IMPLOSION PROTECTION**

All Panasonic picture tubes are equipped with an integral implosion protection system, but care should be taken to avoid damage and scratching during installation. Use only Panasonic replacement picture tubes.

### **1-5 X-RADIATION**

**WARNING:** The only potential source of X-Radiation is the picture tube. However when the high voltage circuitry is operating properly there is no possibility of X-Radiation problem. The basic precaution which must be exercised is to keep the high voltage at the following factory-recommended level.

Note: It is important to use an accurate periodically calibrated high voltage meter.

- 1-5-1 To measure the high voltage, use a high impedance high voltage meter. Connect (-) to chassis and (+) to the CRT anode button.
- 1-5-2 Turn the Brightness control fully counterclockwise.
- 1-5-3 Measure the high voltage. The high voltage meter should indicate at the following factory-recommended level.
- 1-5-4 If the upper meter indication exceeds the maximum level, immediate service is required to prevent the possibility of premature component failure.
- 1-5-5 To prevent X-Radiation possibility, it is essential to use the specified picture tube.
- 1-5-6 The nominal high voltage is 7KV and must not exceed 8KV at zero beam current at rated voltage.

### **IMPORTANT SAFETY NOTICE**

There are special components used in Panasonic CRT displays which are important for safety. These parts are identified on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock, fire or other hazards. Do not modify the original design without written permission of the Panasonic company and this will void the original parts and labor guarantee.

## GENERAL INFORMATION

The Model TR-60S1A is CRT DATA DISPLAY of metal frame type.

TR-60S1A uses P31 (Green color) phosphor and polish Cathode Ray Tube.

Input signal is separate type and each input signal is put through 5 pin-header connector on the P.C. Board.

Input signal is for TTL level.

When connecting to equipment, directly connect it to printed circuit board input terminal through 5 pin-header connector.

In addition, +B is supplied from the outside through 5 pin-header connector, operating the monitor on +12V DC.

Features:

CRT is exceptionally superb in quality and reliability and is of polish type. Phosphor P31.

The deflecting coil is a yoke equipped with 4-P magnet and is of PANASONIC's own design that permits adjustment of geometric distortion on the raster.

Chassis is fully equipped with ICs:

- Vertical deflection
- H.P.C. (horizontal phase control)
- H.AFC/OSC

---

**SPECIFICATIONS**

---

**1. MECHANICAL DESCRIPTION****Dimension:**

Height: 4.4" (112mm) max.  
 Width: 6.0" (152mm) max.  
 Depth: 7.4" (188mm) max.  
 Weight: 3.75 lbs (1.7kg) max.

**Picture Tube:** 150BGB31

Size 5"  
 Def. Angle 70°  
 Neck dia 0.79" (20mm)  
 Phosphor P31

**Tilt:** 0°**2. ENVIRONMENTAL****Temperature:**

Operating: 0 ~ 55°C  
 Non-operating: -40 ~ 65°C  
 Storage and shipment:  
 -40 ~ 65°C

**Humidity:**

Operating, Non-operating, Storage and Shipment:  
 5 ~ 90% (No condensation)

**Altitude:**

Operating: 0 ~ 12,000 feet (0 ~ 3,600m)  
 Non-operating: 0 ~ 12,000 feet (0 ~ 3,600m)  
 Storage and shipment:  
 0 ~ 40,000 feet (0 ~ 12,000m)

**Vibration and shock (Packaged condition):****Vibration:**

Frequency: 5 ~ 50 Hz  
 Vertical: 1.25G  
 Horizontal: 0.75G

**Shock:**

Bottom: Height 21.65" (55cm)  
 Front, Back, Side,  
 Corner and Edge: Height 9.84" (25cm)

**3. ELECTRIC PERFORMANCE****Power Supply:**

Input Voltage: 12V DC  
 Input Current: 0.8A max.

**Input Signals:****Video Signal:**

Polarity: Positive  
 Signal Level: TTL  
 Input Imp.: 75 ohm min. 40pF max.

**Vertical Sync:**

Polarity: Positive  
 Signal Level: TTL  
 Input Imp.: 1k ohm min. 40pF max.

**Horizontal Sync:**

Polarity: Positive  
 Signal Level: TTL  
 Input Imp.: 1k ohm

**Note:** Max rise and fall times (from 10% to 90%) of input signals are less than 10ns.

**Image test condition:**

Display: Full flat field (40 ft-L)  
 Brightness: Max.  
 View Direction: Parallel to the CRT axis  
 Ambient Temperature:

Room temperature

Supply Voltage: 12V DC

**Terrestrial Magnetism:**

Horizontal field 0 Gauss  
 Vertical field 0.5 Gauss

- Note:**
1. All measurements shall be made under normal conditions after an initial warm-up time of more than 20 minutes.
  2. Normal conditions are as stated in above image test condition. (Condition of following each item is normal condition unless otherwise stated.)

**Image:**

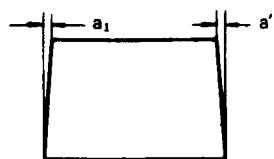

|             |  |
|-------------|--|
| Image Size: | Horizontal $4.17 \pm 0.18''$ (106 ± 4mm) |
|             | Vertical $2.95 \pm 0.18''$ (75 ± 4mm)    |
| Distortion: | See Fig. 1                               |
| Centering:  | See Fig. 2                               |
| H. Tilt:    | See Fig. 3                               |

**Image size variation:**

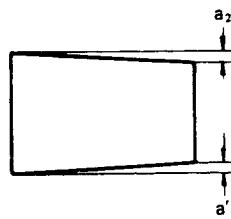

| Cause                   | Image size variation from the normal image size                  | Range of variation             |
|-------------------------|--|--------------------------------|
| By Brightness           | within 0.1" (2.5mm)<br>(Horizontal and Vertical)                 | 0 ~ 60 FL                      |
| By Power Supply Voltage | within $\pm 0.14''$ ( $\pm 3.5$ mm)<br>(Horizontal and Vertical) | 12V DC $\pm 3\%$               |
| By Temperature          | within $\pm 0.14''$ ( $\pm 3.5$ mm)<br>(Horizontal and Vertical) | $25^{\circ}C$ to $30^{\circ}C$ |

**Resolution:** 500 TV line type (center)  
 350 TV line type (center)

# ALIGNMENT PROCEDURE

## PREPARATION

1. Connect the 5-Pin connector from the proper logic to the defined input signal.
2. Apply power to the CRT data display and allow the monitor to stabilize.
3. Adjust coils by means of a hexagonal tuning tool (non-metallic).
4. Variable resister by – screw driver and deflection yoke (deflection distortion) by square tuning tool (non-metallic).
5. All controls are set at optimum position prior to shipment.

## ADJUSTMENT PROCEDURE

### • Image Tilt Adjustment

Loosen the deflection yoke clamp and turn in the arrow directions to adjust tilt. (See Fig. 4).

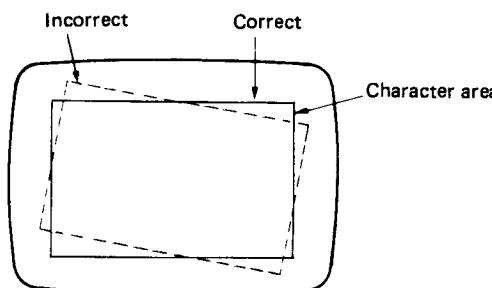

Fig. 4

### • Vertical Hold Adjustment

Adjust the vertical hold control (VR31) until the image becomes stable vertically as shown in Fig. 5.

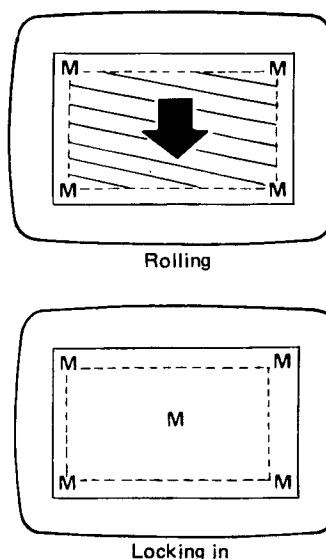

Fig. 5

Checking of height, width and bright should be performed more than 30 minutes after power is applied.

Measure the luminous intensity near the center of CRT and set at  $50 \text{ Lx} \pm 20\%$  ( $40$  to  $60 \text{ Lx}$ ). These adjustment are performed on the basis of the input signal of timing chart (page 4).

### • Horizontal Hold Adjustment

Adjust the horizontal hold control (VR41) to get stable character (syncroning condition) as shown in below (See Fig. 6).

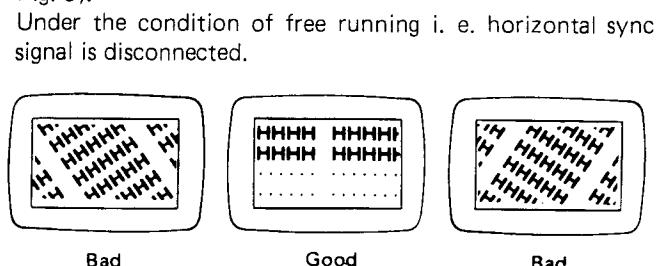

Fig. 6

### • Vertical Height Adjustment

Adjust the vertical height control (VR32) to set the vertical height of the active character area as shown in Fig. 8.

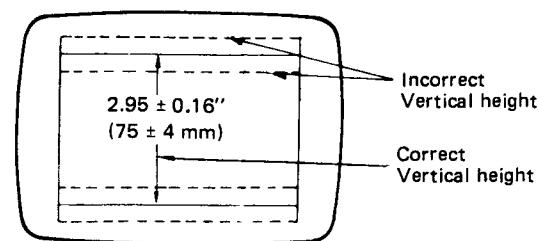

Fig. 8

#### • Horizontal Width Adjustment

Adjust the horizontal width coil (L403) to set the proper width of the active character area as shown in Fig. 9.

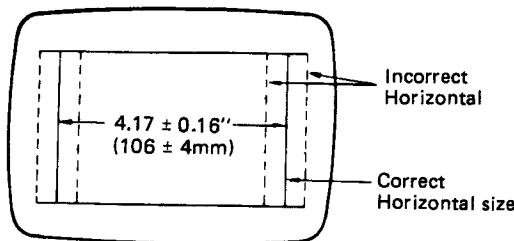

Fig. 9

#### • Vertical Linearity Adjustment

Adjust the vertical linearity control (VR33) for uniform character height within the active character area as shown in Fig. 10.

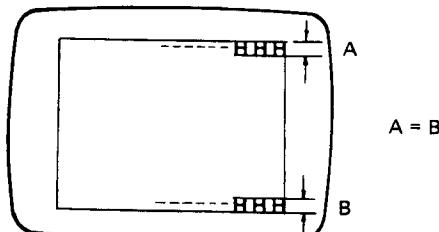

Fig. 10

#### • Centering Magnet Adjustments

Rotate the centering magnet tabs away from each other until the character area is centered on the screen as shown in Fig. 11.

Before this adjustment, be sure to ascertain H. hold.

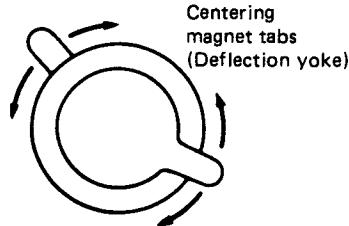

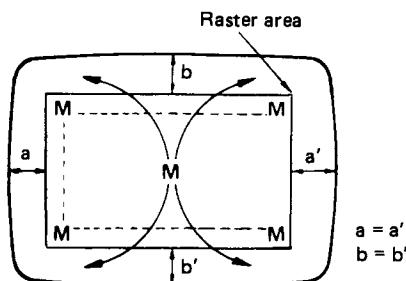

Fig. 11

#### • Focus Control Adjustment

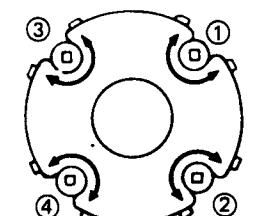

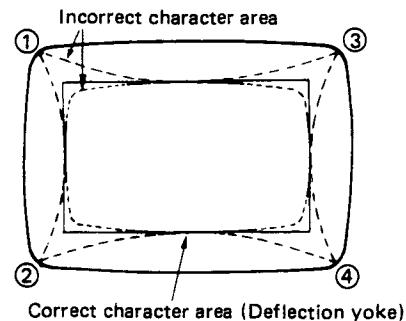

Adjust the focus control (VR64) until optimum is seen on the characters displayed within the active character area.

#### • Sub Brightness Adjustment

Look at a place 11.81" (30cm) distant from the CRT surface and set at a point where the raster slightly comes out, with the contrasts VR set at min.

#### • Correcting Magnet of Geometric Distortion (4)

Adjust each "Distortion Correcting Magnet" until the active character area is adjusted to the proper shape as shown in Fig. 12.

Deflection Correcting mag

Fig. 12

# PREASSEMBLY INSPECTION AND HANDLING INSTRUCTIONS

**Caution:**

Be sure all handling of the CRT Display is done by the CRT mounting brackets. At no time should the wires be used as a means of moving or carrying a given CRT Display. The CRT neck is the most fragile part of the CRT Display Module and extreme care should be taken not to bump, tap, or otherwise exert force on this neck.

Before applying power to the CRT Display an inspection should be preformed to insure that any foreign material has not been dropped in any part of the CRT Display.

1. Insure that the proper signal and power connections are made in accordance.

2. Apply power to CRT display under test and allow CRT display to stabilize for a minimum of 5 minutes.

Note: All adjustments have made at the factory. This procedure is to insure that these adjustments have been made correctly.

3. When turn External Brightness Control to maximum and raster should be slightly visible.
4. Check CRT display for proper centering.
5. Check CRT display for the specified active character area per Page 3, 4 of this Manual.
6. Check Geometric Distortion.
7. Check focus.
8. Check Power Supply Voltages in accordance per Page 2 of this Manual.

## CAUTION FOR SERVICING

Be sure to provide power supply sequence of more than 100 ms.

**Power ON-OFF**

Do not turn OFF power supply when the CRT heater is not sufficiently heated. Otherwise, CRT may be burned in spot.

In case of servicing or replacing CRT, high voltage sometimes remains in the anode of CRT. So, completely discharge high voltage before servicing or replacing CRT so as to prevent a shock to the serviceman.

In this case, discharge to the external conductive coating (aquadac) of CRT.

Discharging to other places will cause troubles. The heat sink of horizontal output transistor is applied with +B. So, do not earth it in case of servicing.

Take care to handle IC42.

Special care should be taken not to apply overvoltage or static electricity to IC42, as it is of C-MOS.

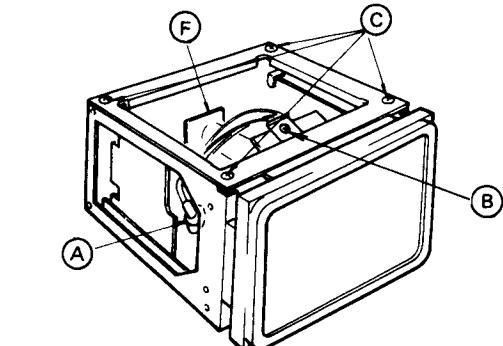

In case of storing or transporting it, be sure to take some countermeasures for static electricity. When using a soldering iron, be sure to connect it to the earth.

The unused terminal should be soldered without fail.

# DISASSEMBLY INSTRUCTION

- **How to replace the Main P.C. Board Ass'y**

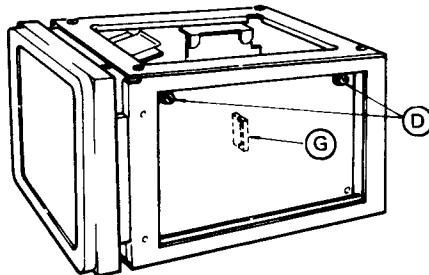

- (1) Remove the anod cap **A**  
(Care must be taken as high voltage may be remaining)
- (2) Remove the ground terminal fixing screw **B**
- (3) Remove the upper plate fixing four screws **C**
- (4) Remove the main P.C. Board fixing two screws **D**
- (5) Remove the interface P.C. Board fixing two screws **E**
- (6) Remove the CRT socket P.C. Board **F** from the CRT
- (7) Remove the deflection yoke connector **G** of the main P.C. Board

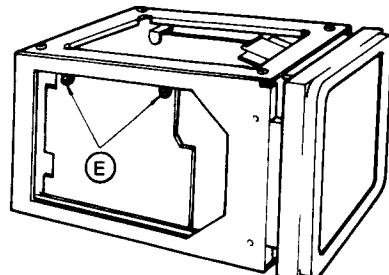

Top View

- **How to replace the CRT**

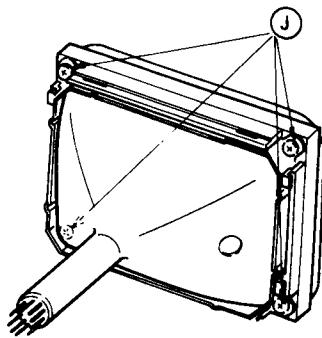

- (1) Remove the anod cap **A**  
(Care must be taken as high voltage may be remaining)
- (2) Remove the upper plate fixing four screws **C**
- (3) Remove the CRT socket P.C. Board **F** from the CRT
- (4) Remove the deflection yoke connector **G** of the main P.C. Board
- (5) Expand the frame **H** a little bit and pull out the front cabinet **I** upward, then CRT block is removed from chassis frame **H**
- (6) Remove the deflection yoke from the CRT
- (7) Remove the fixing four screw **J** from the front cabinet

## NOTE

### 1. RESISTOR

All resistors are carbon 1/4W resistor, unless otherwise noted the following marks.

Unit of resistance is OHM ( $\Omega$ ). (K=1,000, M=1,000,000)

- Ⓐ Solid resistor
- Ⓑ Non Flame

### 2. CAPACITOR

All capacitors are ceramic 50V capacitor, unless otherwise noted the following marks.

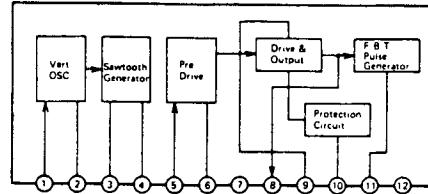

Unit of capacitance is  $\mu F$ , unless otherwise noted.

- Ⓐ Polyester
- Ⓑ Electrolytic capacitor
- Ⓒ Polystyrene capacitor
- Ⓓ Tantalum

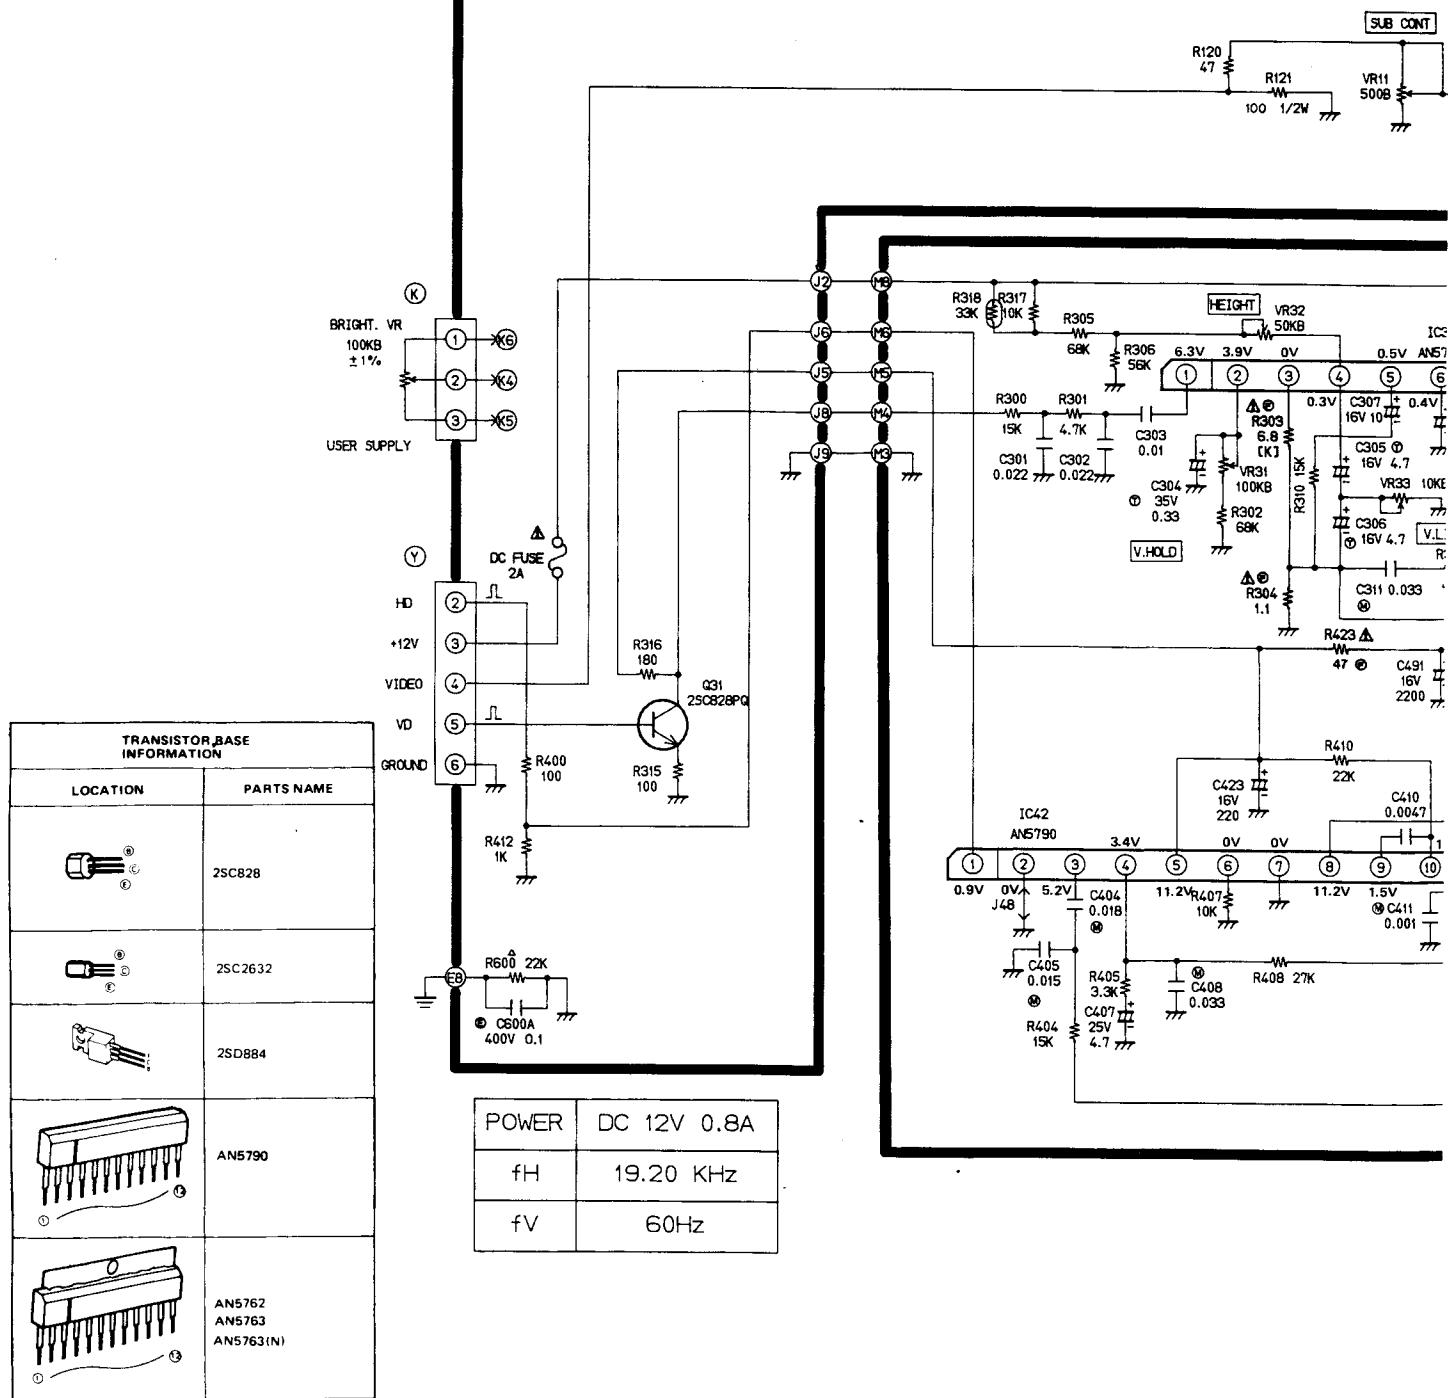

### 3. COIL

Unit of inductance is  $\mu H$ .

AN5763, AN5763

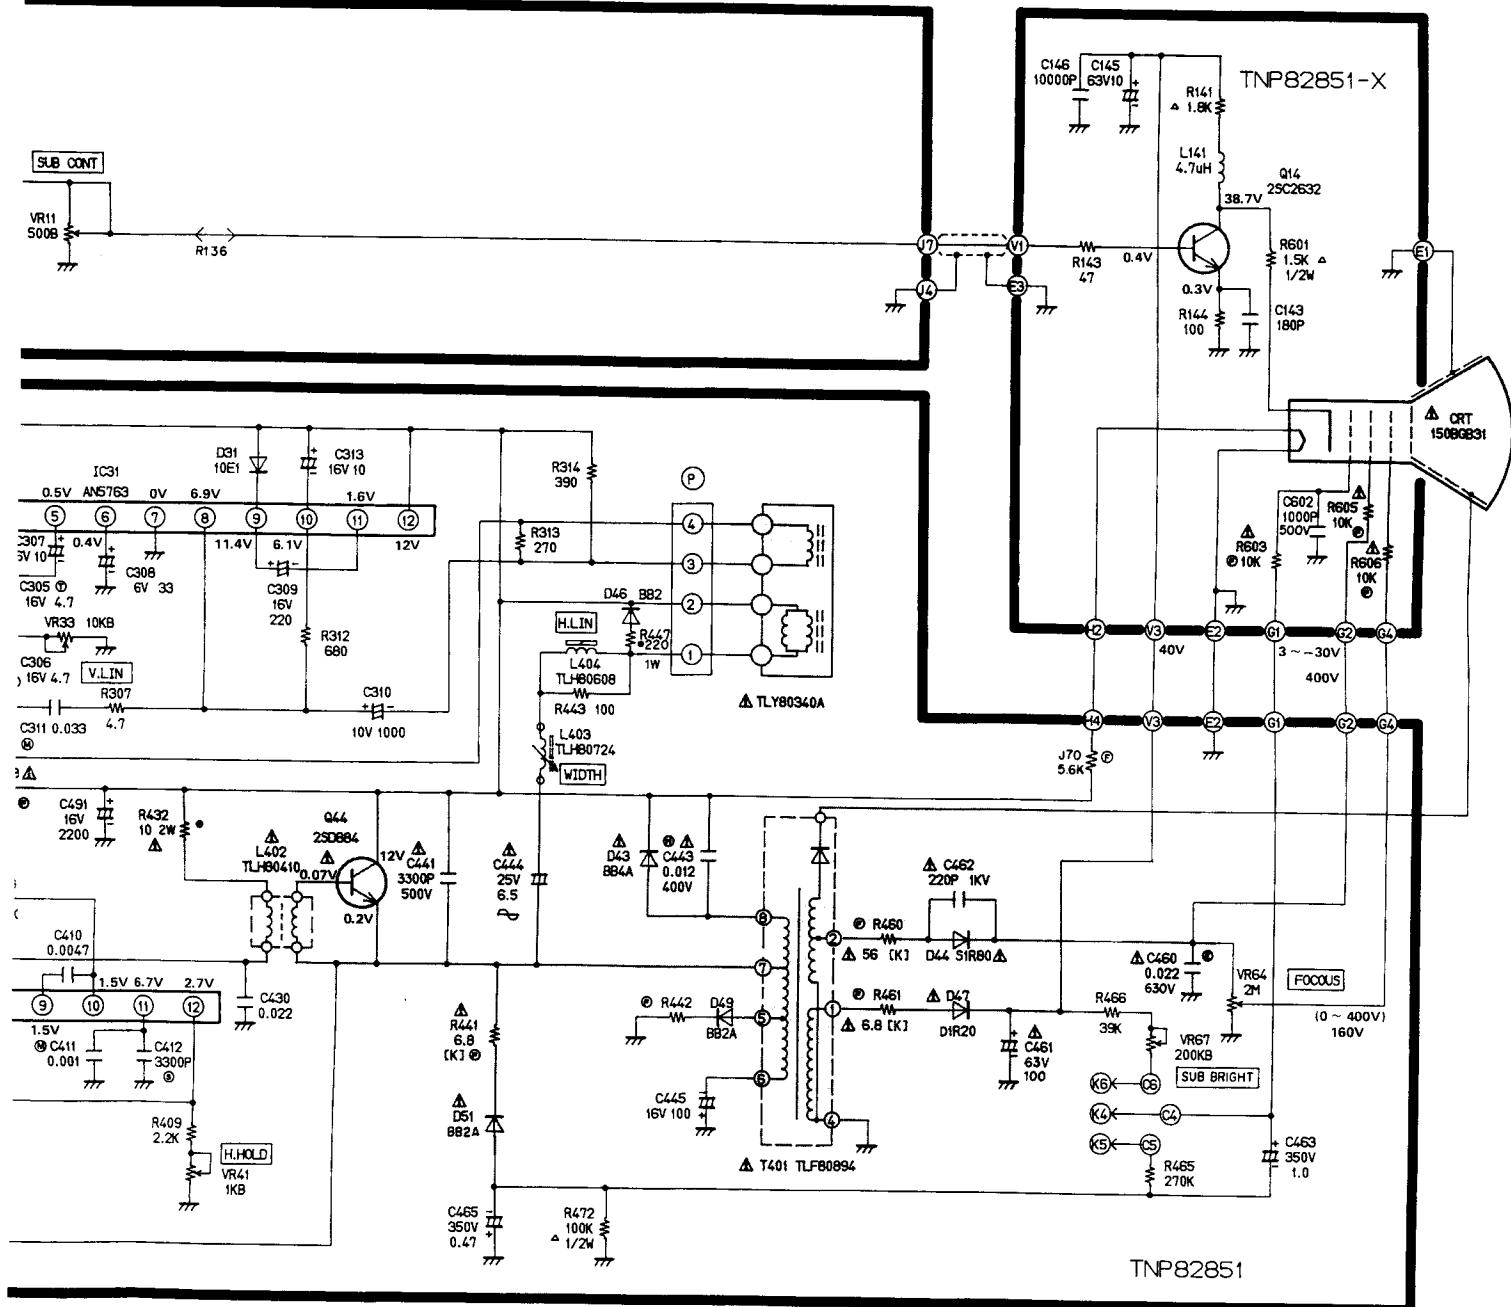

TNP82851-W

## **IMPORTANT SAFETY NOTICE**

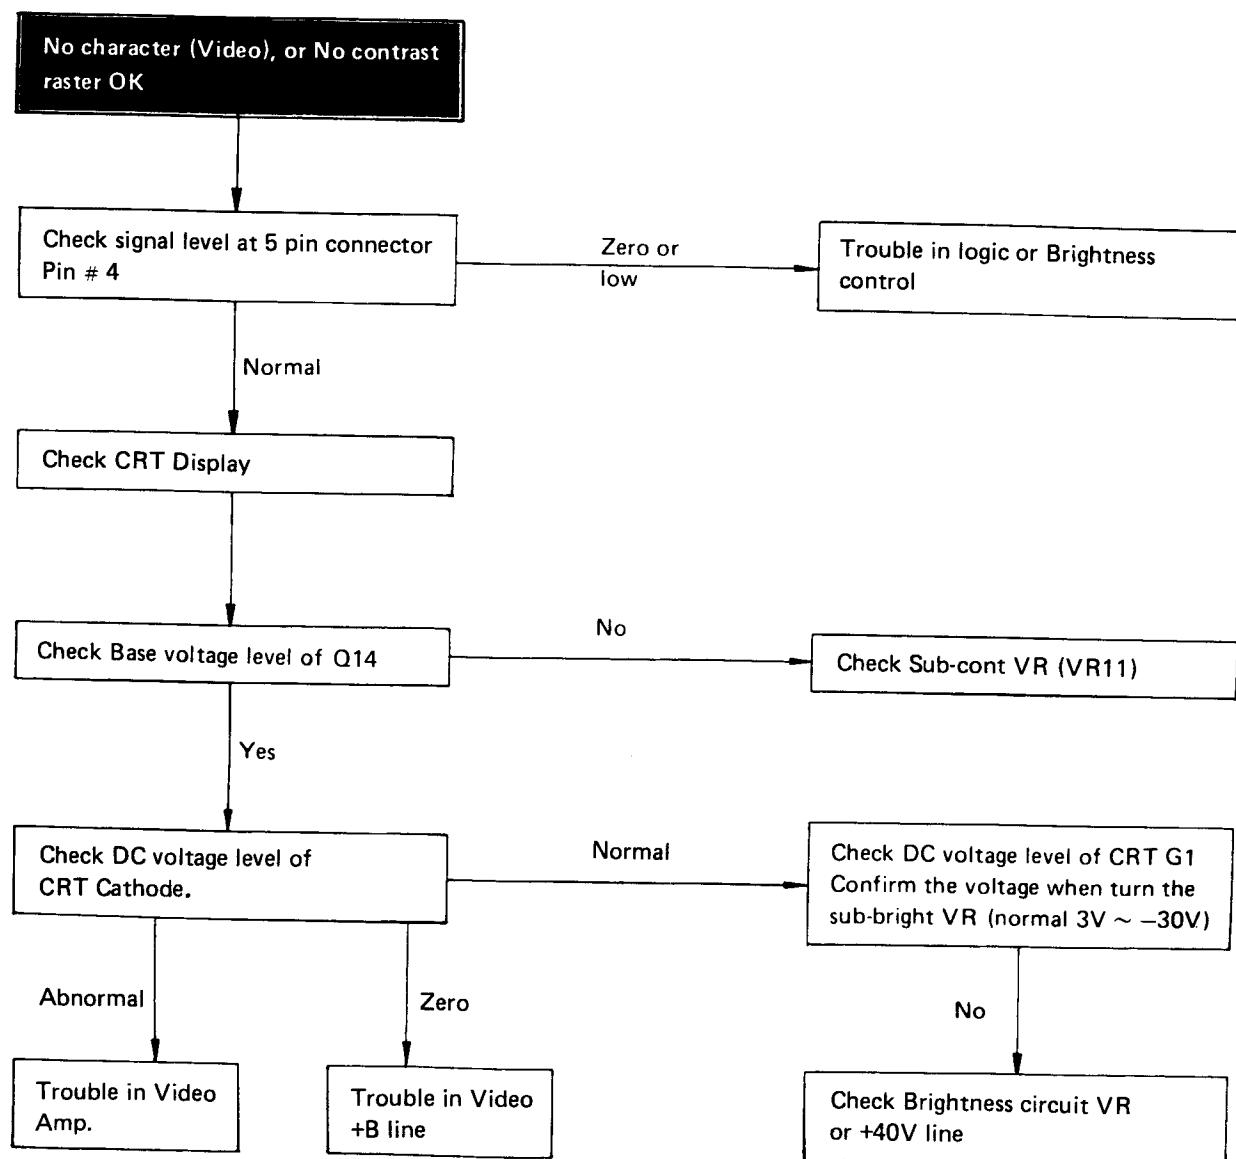

The component identified by shading or the international symbol  on this schematic diagram incorporates special features important for protection from X-Radiation, fire and electrical shock hazards. When servicing it is essential that only manufacturer's specified parts be used for those critical components.

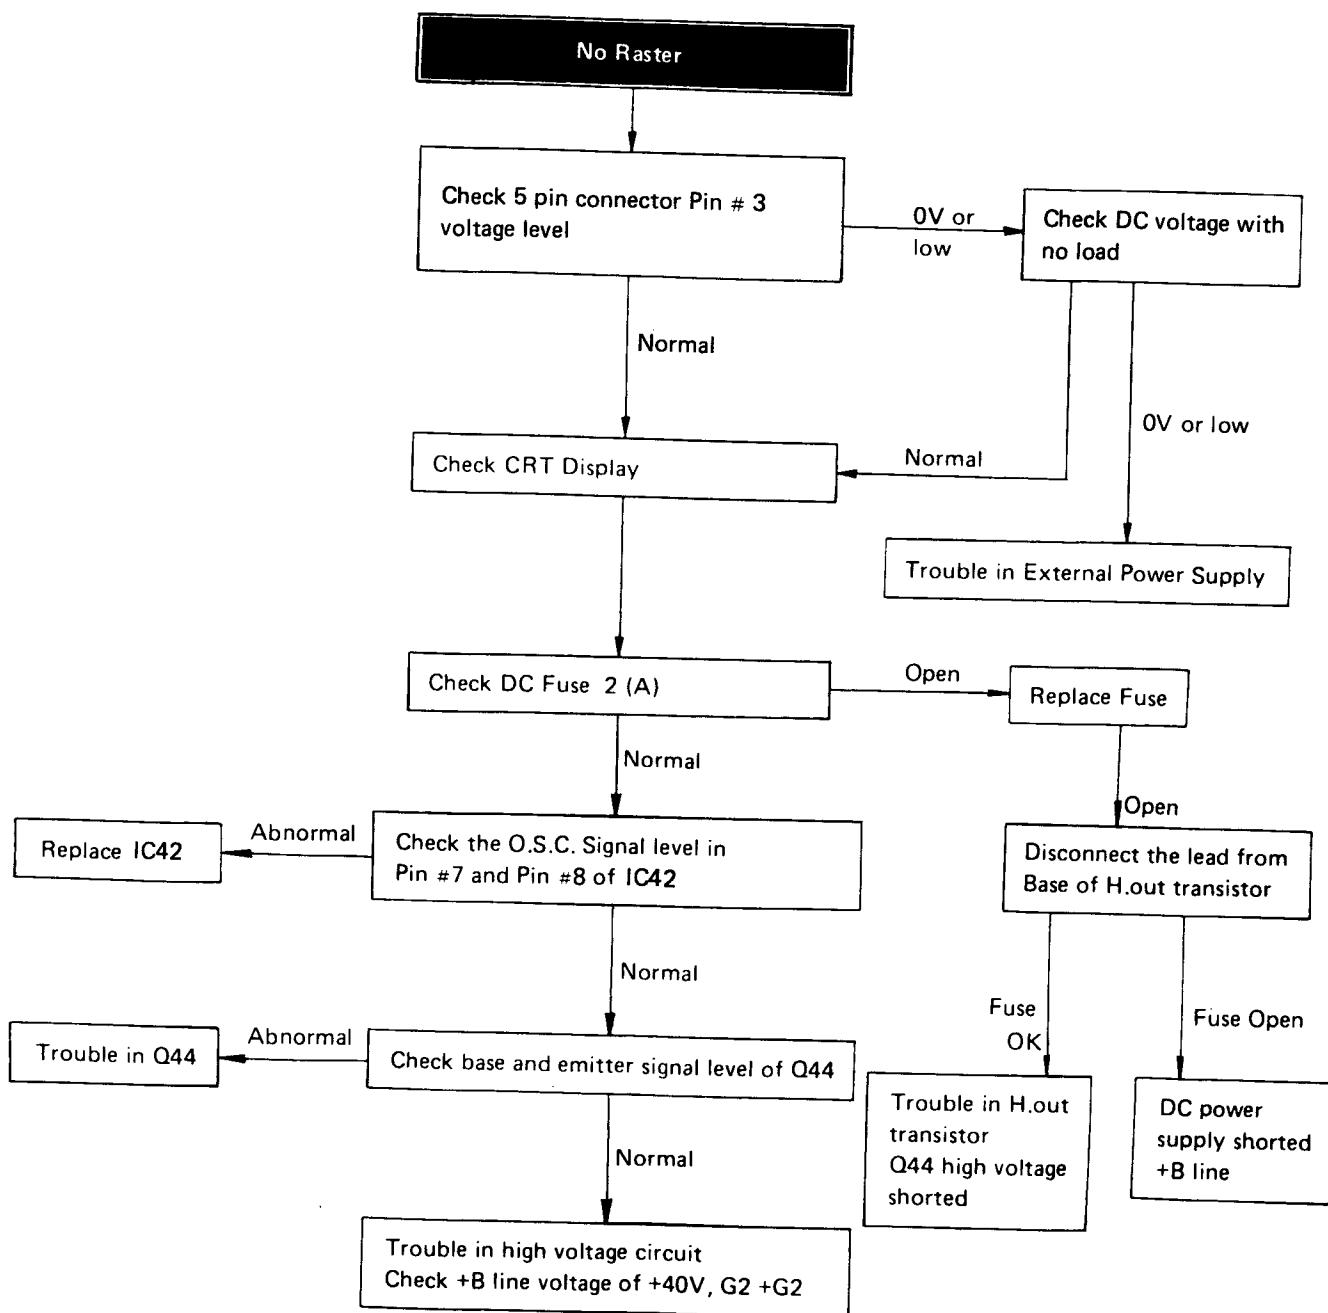

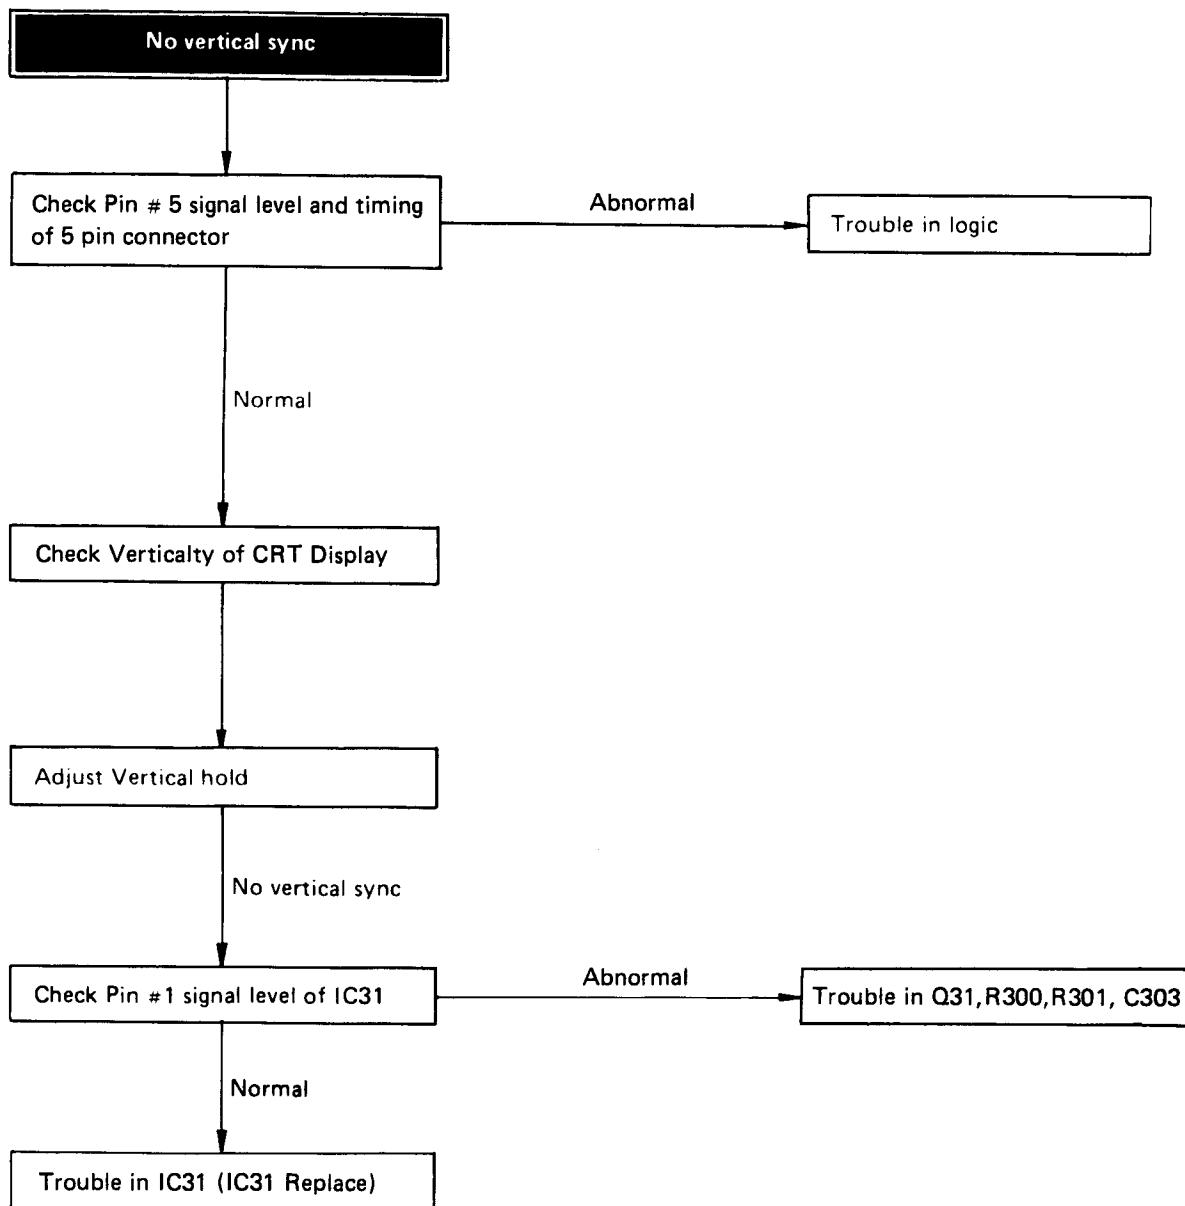

---

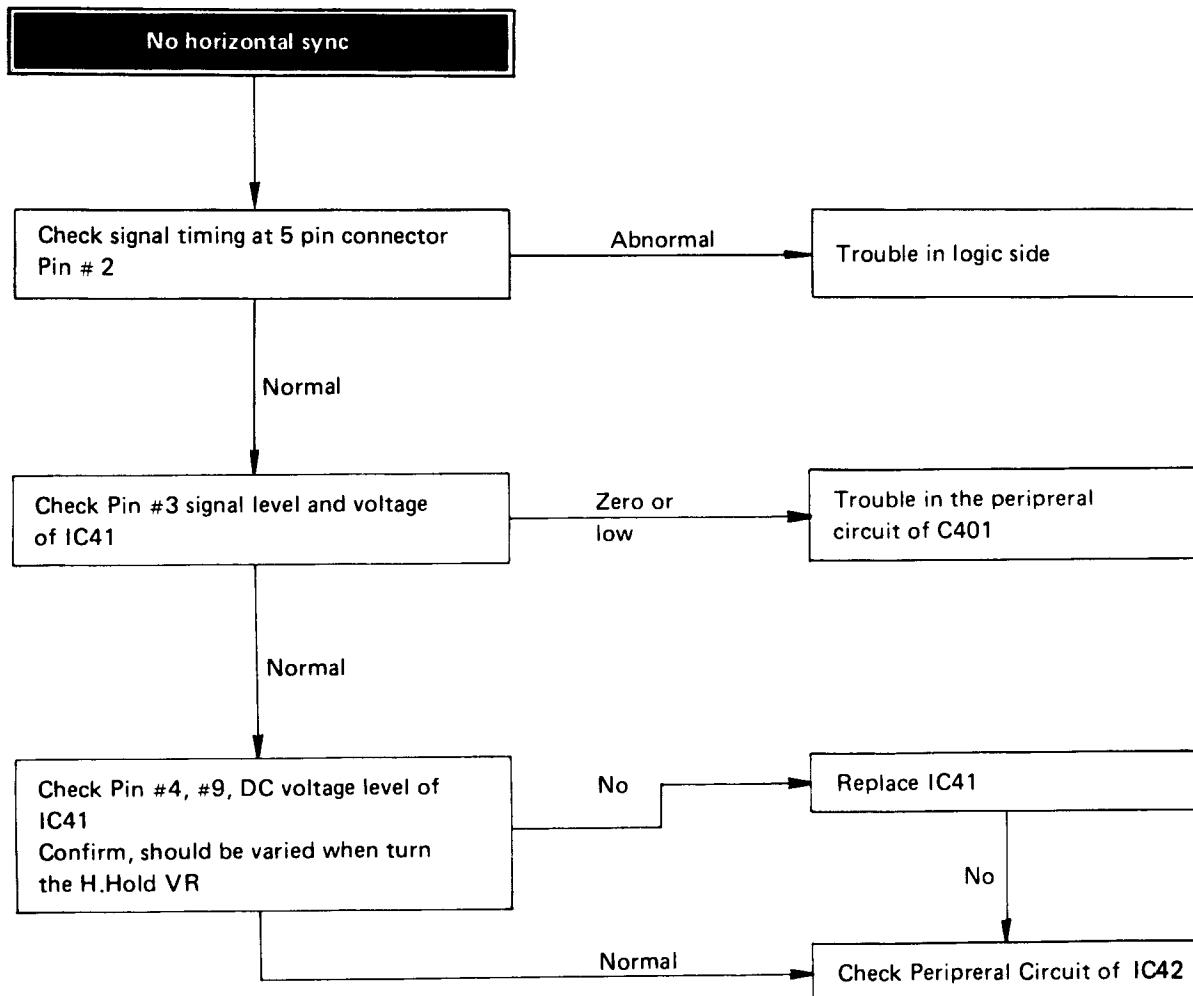

TROUBLE SHOOTING HINTS

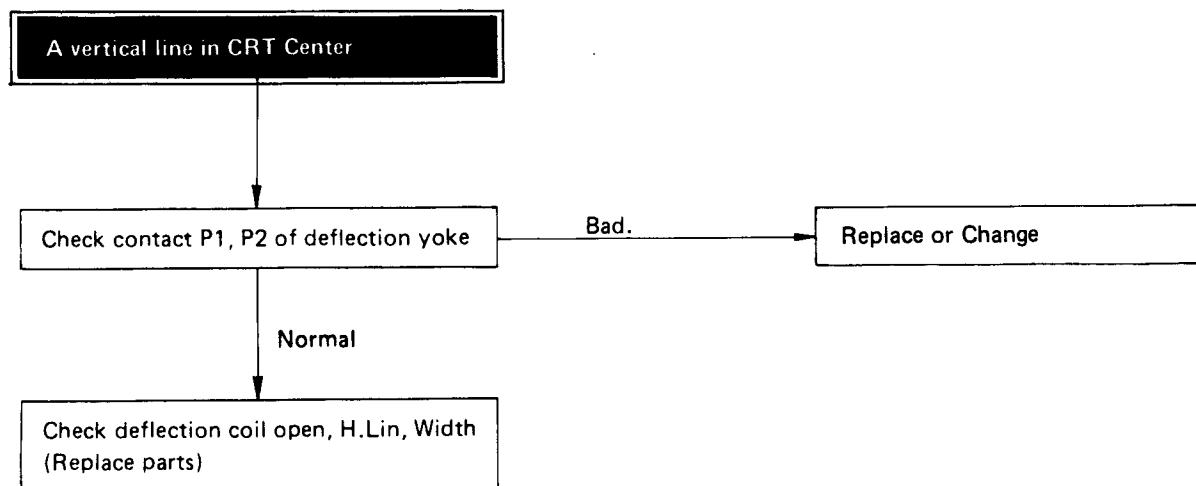

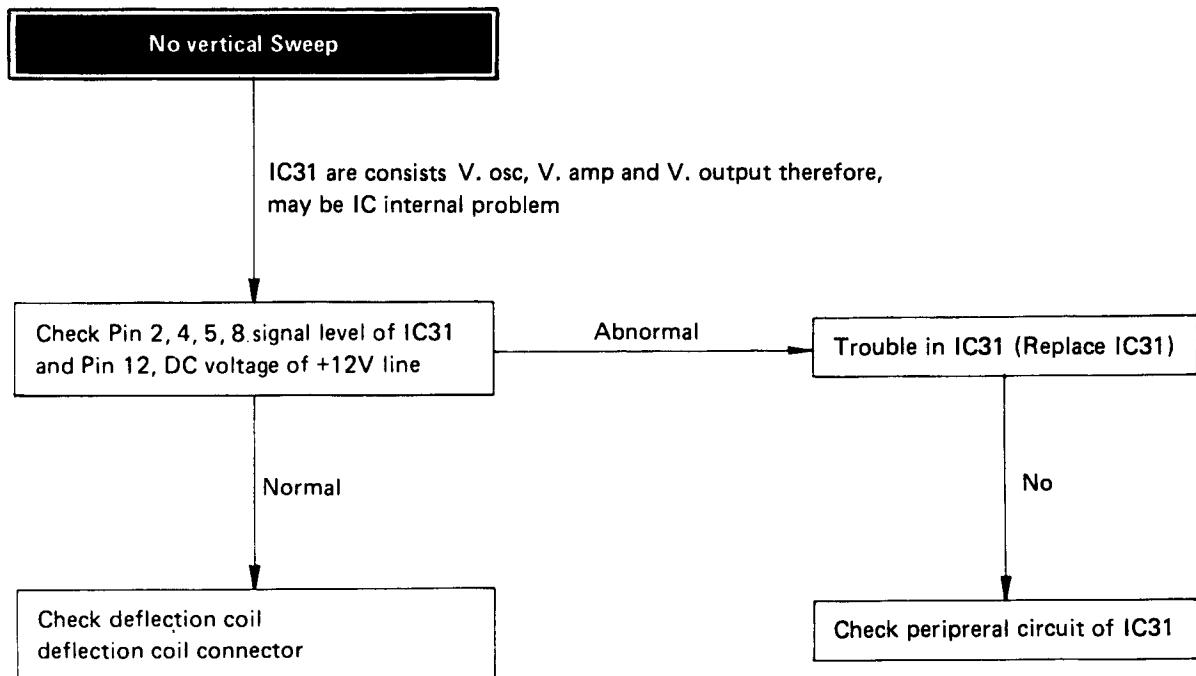

---

## -REPLACEMENT PARTS LIST-

#### **— Important Safety Notice**

Components identified by the International symbol  have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.

# SCHEMATIC DIAGRAM

## NOTE

### 1. RESISTOR

All resistors are carbon 1/4W resistor, unless otherwise noted the following marks.

Unit of resistance is OHM ( $\Omega$ ). (K=1,000, M=1,000,000)

- ▲ : Solid resistor
- ◎ : Fusible
- : Non Flame

### 2. CAPACITOR

All capacitors are ceramic 50V capacitor, unless otherwise noted the following marks.

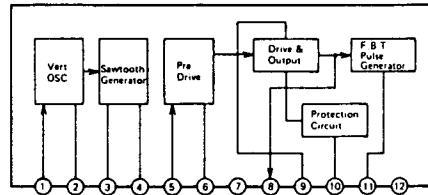

Unit of capacitance is  $\mu F$ , unless otherwise noted.

- ◎ : Polyester
- ▲ : Electrolytic capacitor
- : Polystyrene capacitor
- : Tantalum

### 3. COIL

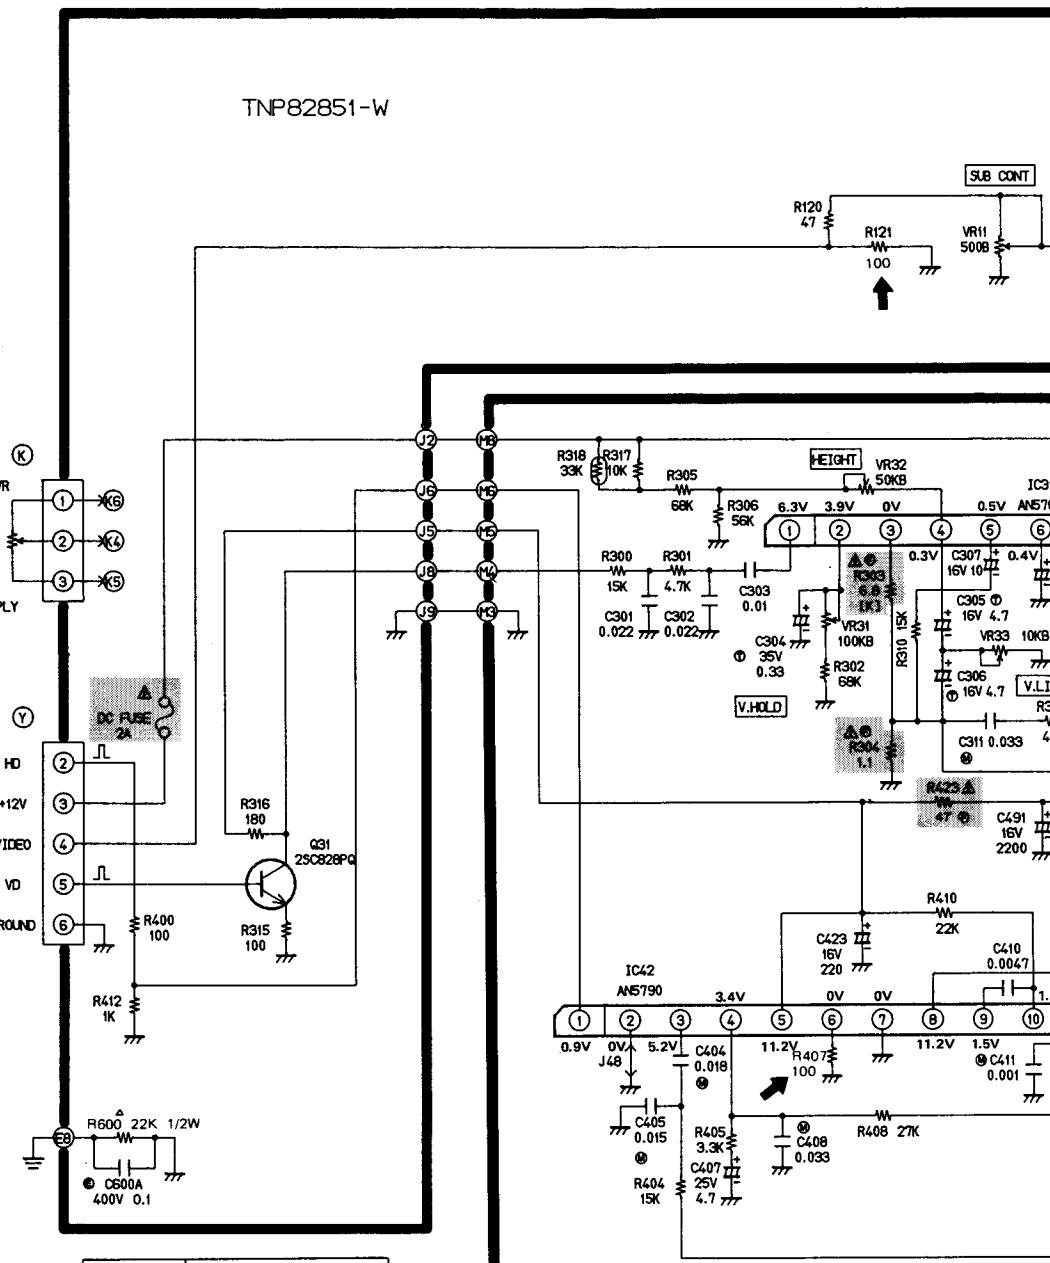

Unit of inductance is  $\mu H$ .

## IMPORTANT SAFETY NOTICE

The component identified by shading or the international symbol  $\Delta$  on this schematic diagram incorporates special features important for protection from X-Radiation, fire and electrical shock hazards. When servicing it is essential that only manufacturer's specified parts be used for those critical components.
