## . IMPORTANT SAFETY NOTICES

## PREVENTION OF PHYSICAL INJURY

1. Before disassembling or assembling parts of the copier and peripherals, make sure that the copier power cord is unplugged.
2. The wall outlet should be near the copier and easily accessible.
3. Note that some components of the copier and the paper tray unit are supplied with electrical voltage even if the main power switch is turned off.
4. If any adjustment or operation check has to be made with exterior covers off or open while the main switch is turned on, keep hands away from electrified or mechanically driven components.
5. If the "Start" key is pressed before the copier completes the warm-up period (the "Start" key starts blinking red and green alternatively), keep hands away from the mechanical and the electrical components as the copier starts making copies as soon as the warm-up period is completed.
6. The inside and the metal parts of the fusing unit become extremely hot while the copier is operating. Be careful to avoid touching those components with your bare hands.

## HEALTH SAFETY CONDITIONS

1. Always replace the ozone filters with the specified ones at the specified intervals.
2. Toner is non-toxic, but if you get it in your eyes by accident, it may cause temporary eye discomfort. Try to remove with eye drops or flush with water as first aid. If unsuccessful, get medical attention.

## OBSERVANCE OF ELECTRICAL SAFETY STANDARDS

1. The copier and its peripherals must be installed and maintained by a customer service representative who has completed the training course on those models.
2. The danger of explosion exists if batteries on the FCU and JBIG are incorrectly replaced. Replace only with the same or an equivalent type recommended by the manufacturer. Discard used batteries in accordance with the manufacturer's instructions.

## SAFETY AND ECOLOGICAL NOTES FOR DISPOSAL

1. Do not incinerate AIO cartridge. Toner dust may ignite suddenly when exposed to and open flame.
2. Dispose of used AIO cartridge in accordance with local regulations. (This is non-toxic supplies.)
3. Dispose of replaced parts in accordance with local regulations.
4. When keeping used lithium batteries in order to dispose of them later, do not put more than 100 batteries per sealed box. Storing larger numbers or not sealing them apart may lead to chemical reactions and heat build-up.

## LASER SAFETY

The Center for Devices and Radiological Health (CDRH) prohibits the repair of laser-based optical units in the field. The optical housing unit can only be repaired in a factory or at a location with the requisite equipment. The laser subsystem is replaceable in the field by a qualified Customer Engineer. The laser chassis is not repairable in the field. Customer engineers are therefore directed to return all chassis and laser subsystems to the factory or service depot when replacement of the optical subsystem is required.

## $\triangle$ WARNING

Use of controls, or adjustment, or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

WARNING FOR LASER UNIT
WARNING: Turn off the main switch before attempting any of the procedures in the Laser Unit section. Laser beams can seriously damage your eyes.

CAUTION MARKING:

## TABLE OF CONTENTS

1. OVERALL MACHINE INFORMATION ..... 1-1
1.1 SPECIFICATIONS ..... 1-1
1.2 MACHINE CONFIGURATION ..... 1-5
1.3 PAPER PATH ..... 1-6
1.4 MECHANICAL COMPONENT LAYOUT ..... 1-7

1) Not APS mode
2) $A 4 / L T$ copying
3) Full size

Warm-up Time: Less than 30 seconds $\left(20^{\circ} \mathrm{C}, 68^{\circ} \mathrm{F}\right)$ : 115 V machine Less than 40 seconds $\left(20^{\circ} \mathrm{C}, 68^{\circ} \mathrm{F}\right)$ : 230 V machine
First Copy Time: Less than 6.5 seconds
NOTE: Measurement Conditions

1) When polygonal mirror motor is spinning.
2) Not APS mode
3) A4/LT copying
4) Full size

Copy Number Input: Ten-key pad, 1 to 99 (count up or count down)
Manual Image Density:
Automatic Reset:
7 steps
60 seconds is the standard setting; it can be changed with a User Tool.
Automatic Shut Off: 15 minutes is the standard setting; it can be changed with a User Tool.

Copy Paper Capacity: Paper Tray:
250 sheets
Optional Paper Tray Unit:
500 sheets $\times 1$, or 500 sheets $\times 2$
By-pass Tray:
100 sheets (A4, B5, A5, B6, 81/2" x 11", 51/2" x 81/2") 10 sheets (A3, B4, 11 " $\times 17$ ", $81 / 2^{\prime \prime} \times 13$ ")
1 sheets (non-standard sizes)
NOTE: Copy weight: $80 \mathrm{~g} / \mathrm{m}^{2}$ (20 lb).
Toner Replenishment: All-in-one toner cassette cartridge (750 g/cartridge)
Toner Yield: $\quad 12 \mathrm{k}$ copies (A4 sideways, $6 \%$ full black, 1 to 1 copying, ADS mode)

Optional Equipment: • Platen cover

- Auto document feeder
- Paper tray unit (1 tray)
- Paper tray unit (2 trays)
- 1-bin sorter
- Tray heater
- Optics anti-condensation heater
- Drum heater
- Copier feature expander (48 MB memory)

Copy Capacity: Copy Tray: 250 sheets (without 1-bin sorter), 125 sheets (with 1-bin sorter)
1-bin Sorter: 125 sheets
Memory Capacity:

|  |  | Standard (16 MB) | Optional (+48 MB) |
| :---: | :---: | :---: | :---: |
| Sort, Rotate Sort | A4, 81/2" x $11{ }^{\prime \prime}$ | $\bigcirc$ | $\bigcirc$ |
|  | B4, 81/2" $\times 14{ }^{\prime \prime}$ | $\bigcirc$ | $\bigcirc$ |
|  | A3, 11" x 17" | $\bigcirc$ | $\bigcirc$ |
| Number of pages | A4 6\% | 80 sheets | 99 sheets |
|  | A4 ITU-T\#4 12\% | 35 sheets | 99 sheets |

O: Available
NOTE: The paper sizes that can be used with Rotate Sort are A4/81/2" x 11 " and B5 only.

### 1.3 PAPER PATH

1. Optional ADF
2. By-pass feed tray
3. Optional paper tray (1 tray)
4. Paper tray
5. Optional 1-bin sorter

### 1.4 MECHANICAL COMPONENT LAYOUT

A250V561.WMF

1. 1st mirror (scanner)
2. Exposure lamp
3. Polygonal mirror motor
4. Original width sensor
5. 1st mirror (laser unit)
6. Original length sensor
7. Barrel toroidal lens (BTL)
8. Lens
9. SBU board
10. F-theta mirror
11. Hot roller
12. Pressure roller
13. Transfer roller
14. By-pass feed roller
15. By-pass table
16. Vertical transport roller
17. Paper feed roller
18. Bottom plate
19. All-in-one cartridge (AIO cartridge)
20. 3rd mirror
21. 2nd mirror

### 1.5 ELECTRICAL COMPONENT DESCRIPTIONS

Refer to the electrical component layout on the reverse side of the point-to-point diagram for the location of the components, using the symbols and index numbers.

### 1.5.1 COPIER ENGINE

| Symbol | Name | Function | Index No. |
| :---: | :---: | :---: | :---: |
| Motors |  |  |  |
| M1 | Scanner | Drives the 1st and 2nd scanners. | 4 |
| M2 | Polygonal Mirror | Turns the polygonal mirror. | 28 |
| M3 | Main | Drives the main unit components. | 12 |
| M4 | Exhaust Fan | Removes heat from around the fusing unit. | 46 |
| Magnetic Clutches |  |  |  |
| MC1 | Paper Feed | Starts paper feed from the tray. | 14 |
| MC2 | By-pass Feed | Starts paper feed from the by-pass table. | 15 |
| MC3 | Vertical Transport | Drives the vertical transport rollers. | 18 |
| MC4 | Registration | Drives the registration rollers. | 13 |
| Switches |  |  |  |
| SW1 | Main | Provides power to the machine. If this is off, there is no power supplied to the machine. | 40 |
| SW2 | Right Door Switch 1 | Cuts the +5 V LD dc power line. | 30 |
| SW3 | Right Door Switch 2 | Detects if the front door is open or not, and cuts the +24 V dc power line for the main motor and power pack. | 31 |
| SW4 | Vertical Transport Cover Switch | Detects if the front door is open or not, and cuts the +24 V dc power line for the vertical transport clutch. | 25 |
| SW5 | Paper Size | Detects paper size. | 24 |
| Sensors |  |  |  |
| S1 | Scanner HP | Informs the CPU when the 1st and 2nd scanners are at home position. | 3 |
| S2 | Original Width | Detects original width. This is one of the APS (Auto Paper Select) sensors. | 37 |
| S3 | Original Length 1 | Detects original length. This is one of the APS (Auto Paper Select) sensors. | 6 |
| S4 | Original Length 2 | Detects original length. This is one of the APS (Auto Paper Select) sensors. | 6 |
| S5 | Toner Near-End | Detects toner near-end. | 21 |
| S6 | Paper End | Informs the CPU when the tray runs out of paper. | 23 |
| S7 | Paper Near-End | Informs the CPU when the paper in the tray is almost finished. The printer controller uses this sensor. | 19 |

| Symbol | Name | Function | Index No. |
| :---: | :---: | :---: | :---: |
| S8 | By-pass Tray Paper | Informs the CPU that there is paper in the by-pass feed table. | 16 |
| S9 | By-pass Paper Size | Detects the paper size in the by-pass tray. | 20 |
| S10 | Vertical Transport | Detects misfeeds. | 22 |
| S11 | Registration | Detects misfeeds and controls registration clutch off-on timing. | 17 |
| S12 | Fusing Exit | Detects misfeeds. | 35 |
| S13 | Exit Tray Paper | Detects if there is paper on the exit tray or not. | 27 |
| S14 | Platen Cover | Informs the CPU that the platen cover is in the up or down position (related to the APS/ARE functions). | 5 |
| S15 | AIO Set | Informs the CPU that an AIO is installed. | 33 |
| PCBs |  |  |  |
| PCB1 | BICU | Controls all base engine functions both directly and through other control boards. | 44 |
| PCB2 | PSU | Provides dc power to the system and ac power to the fusing lamp and heaters. | 39 |
| PCB3 | IOB | Controls the fusing lamp and the mechanical parts of the machine. | 45 |
| PCB4 | SBU | Contains the CCD, and outputs a video signal to the BICU board. | 8 |
| PCB5 | Lamp Stabilizer | Stabilizes the power to the exposure lamp. | 7 |
| PCB6 | LD Unit | Controls the laser diode. | 26 |
| PCB7 | Operation Panel | Controls the operation panel. | 36 |
| PCB8 | Memory (Option) | Expands memory capacity. | - |
| PCB9 | Printer Controller (Option) | Receives print data from a PC. | 42 |
| PCB10 | FCU (Option) | Controls all fax communications and fax features, in cooperation with the BICU. | 43 |
| PCB11 | NCU (Option) | Switches the analog line between the fax unit and the external telephone. | 47 |
| Lamps |  |  |  |
| L1 | Exposure Lamp | Applies high intensity light to the original for exposure. | 2 |
| L2 | Fusing Lamp | Heats the hot roller. | 10 |
| Heaters |  |  |  |
| H1 | Anti-condensation (Option) | Turns on when the main switch is off to prevent moisture from forming on the optics. | 1 |
| H2 | Drum (Option) | Turns on when the main switch is off to prevent moisture from forming around the drum. | - |
|  |  |  |  |

| Symbol | Name | Function |  |
| :---: | :--- | :--- | :---: |
| Others | Index No. |  |  |
| TF1 | Fusing Thermofuse | Opens the fusing lamp circuit if the fusing <br> unit overheats. | 9 |
| TH1 | Fusing Thermistor | Detects the temperature of the hot roller. | 11 |
| PP1 | C/B/T Power Pack | Provides high voltage for the charge, <br> development and transfer rollers. | 38 |
| LSD 1 | Laser Synchronization <br> Detector | Detects the laser beam at the start of the <br> main scan. | 29 |
| CO1 | Total Counter | Keeps track of the total number of prints <br> made. | 48 |
| CO2 | Key Counter (Option) | Used for control of authorized use. If this <br> feature is enabled for coping, coping will be <br> impossible until it is installed. | - |
| LED1 | Exit Tray | Indicates if there is paper on the exit tray. | 32 |
| LED2 | 1-bin Sorter | Indicates if there is paper on the 1-bin <br> sorter. 1-bin sorter is option. | 34 |
| SP1 | Speaker | Turns on during fax communication. | 41 |
|  |  |  |  |

A250V109.WMF

1. By-pass feed clutch
2. Vertical transport clutch
3. Registration clutch
4. Paper feed clutch
5. Main motor

### 1.7 COPY PROCESS

### 1.7.1 OVERVIEW

A250V507.WMF

## 1. DRUM CHARGE

In the dark, the charge roller gives a negative charge of -600 volts to the organic photo-conductive (OPC) drum. The charge remains on the surface of the drum because the OPC layer has a high electrical resistance in the dark.
2. LASER EXPOSURE

The processed data scanned from the original is retrieved from the memory and transferred to the drum by a laser beam, which forms an electrical latent image on the drum surface. The amount of charge remaining as a latent image on the drum depends on the laser beam intensity to about -100 volts, which is controlled by the BICU board.
3. DEVELOPMENT

The development roller charges the toner with a negative bias of -400 volts. Toner particles jump across to the drum and electrostatically attach to the areas of the drum surface where the laser reduced the negative charge on the drum.

## 4. IMAGE TRANSFER

Paper is fed to the area between the drum surface and the transfer roller at the proper time for aligning the copy paper and the developed image on the drum surface. Then, the transfer roller applies a high positive charge to the reverse side of the paper. This positive charge pulls the toner particles from the drum surface onto the paper. At the same time, the paper is electrostatically attracted to the transfer roller.
5. PAPER SEPARATION

Paper separates from the drum as a result of the electrostatic attraction between the paper and the transfer roller. The discharge plate helps separate the paper from the drum.
6. CLEANING

The cleaning blade removes any toner remaining on the drum surface after the image transfers to the paper.

## 7. QUENCHING

There is no quenching lamp. The power supply board applies $1.6 \mathrm{kVp}-\mathrm{p}$ ( 1.05 $\mathrm{mA}) 1 \mathrm{kHz} \mathrm{AC}$ to the charge roller. This current removes any remaining voltage on the drum surface.

### 1.8 BOARD STRUCTURE

### 1.8.1 OVERVIEW

### 1.8.2 DESCRIPTION

## 1. BICU (Base Engine and Image Control Unit)

The main board controls the following functions:

- Engine sequence
- Scanner, laser printer engine
- Timing control for peripherals
- Image processing, video control
- Operation control
- Various application boards (fax, printer)
- Machine control, system control

## 2. IOB (I/O Board)

The IOB handles the following functions:

- Drive control for the sensors, motors, and solenoids of the printer and scanner
- High voltage control board control
- Serial interfaces with peripherals
- Fusing control

## 3. SBU (Sensor Board Unit)

The SBU deals with the analog signals from the CCD and converts them into digital signals.

## 4. EMB (Extended Memory Board) (Option)

The EMB stores the image data. An extra 48 MB of memory can be added. This increases the number of pages that can be stored.

## 2. DETAILED SECTION DESCRIPTIONS

### 2.1 SCANNING

### 2.1.1 OVERVIEW

A250D003.WMF

An exposure lamp [A], a xenon lamp in this model, illuminates the original. The 1st, 2 nd, 3rd mirrors, and lens $[B]$ reflect the image onto the CCD (charge coupled device) [C]. The SBU (Sensor Board Unit) consists of the CCD and the lens.
The 1st scanner [D] consists of the exposure lamp, a reflector [E], and the 1st mirror [F].

The exposure lamp is energized by a DC supply to avoid uneven light intensity as the 1st scanner moves in the sub-scan direction. The entire exposure lamp surface is frosted to ensure even exposure in the main scan direction.
The light reflected by the reflector is of almost equal intensity to the light from the exposure lamp, to reduce shadows on pasted originals.
An optics anti-condensation heater [G] is available as an option. It can be installed on the left side of the scanner unit. It turns on whenever the power cord is plugged in and the machine is in off condition.

### 2.1.2 SCANNER DRIVE

The scanner drive motor $[A]$ (a stepper motor) drives the 1st and 2nd scanners $[B$, $C$ ] through the timing belts [D], scanner drive pulley [E], and the Accuride rail at the rear.

## Book Mode

The main CPU controls and operates the scanner drive motor. In full size mode, the 1st scanner speed is $92 \mathrm{~mm} / \mathrm{s}$ during scanning. The 2nd scanner speed is half that of the 1st scanner.

In reduction or enlargement mode, the scanning speed depends on the magnification ratio ( $\mathrm{M}: 0.5$ to 2.00). The returning speed is always the same, whether in full size or magnification mode.

Changing the scanner drive motor speed changes the magnification in the subscan direction. Use SP mode (SP4-101) to adjust this.
In the main scan direction, magnification is done by image processing on the BICU (Base Engine Image Control Unit) board. Adjust magnification in the main scan direction with SP4-008.

## ADF Mode

The scanners remain in their home position (the scanner H.P sensor detects the 1st scanner) to scan the original. The ADF motor feeds the original through the ADF.

In reduction/enlargement mode, changing the ADF motor speed adjusts the image length in the sub-scan direction (adjust with SP6-007). The BICU board adjusts the magnification in the main scan direction, in the same way as in book mode (adjust with SP4-008).

### 2.1.3 ORIGINAL SIZE DETECTION IN PLATEN MODE

A250D526.WMF

In the optics cavity, there are four reflective sensors in the 115 V machines, and six reflective sensors in the 230 V machines. These are the original width sensors [ A ] and the original length sensors $[B]$, and they detect the length and width of the original. They are also known as the APS (Auto Paper Selection) sensors.
While the main switch is on, these sensors are active and the original size data is always sent to the CPU. However, the CPU checks the data only when the platen cover is opened.
The main CPU takes the original size data when the platen cover sensor [C] activates. This is when the platen is about 15 cm above the exposure glass. At this time, only the sensor(s) located underneath the original receive the reflected light and switch on. The other sensor(s) remain off. The main CPU can recognize the original size from the on/off signals from the APS sensors.

If the copy is made with the platen fully open, the main CPU decides the original size from the sensor outputs when the Start key is pressed.

| Original Size |  |  | Length Sensors |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Width Sensors |  |  |  |  |  |  |
| A4/A3 version | LT/DLT version | L1 | L2 | L3 | L4 | S1 |
| S2 |  |  |  |  |  |  |
| A3 | $11^{\prime \prime} \times 17^{\prime \prime}$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| B4 | $10^{\prime \prime} \times 14^{\prime \prime}$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| F4 | $81 / 2^{\prime \prime} \times 14^{\prime \prime}\left(8^{\prime \prime} \times 13^{\prime \prime}\right)$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ |
| A4-L | $81 / 2^{\prime \prime} \times 11^{\prime \prime}$ | $\bigcirc$ | $\bigcirc$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ |
| B5-L | - | $\bigcirc$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ |
| A4-S | $11^{\prime \prime} \times 81 / 2^{\prime \prime}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\bigcirc$ |
| B5-S | - | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\boldsymbol{X}$ | $\bigcirc$ |
| $\boldsymbol{X}$ |  |  |  |  |  |  |

O: ON X: OFF
NOTE: The length sensors L1 and L2 are used only for 230 V machines.
For other combinations, the operation panel will display "CANNOT DETECT ORIG. SIZE".

The above table shows the sensor output for each original size. This original size detection method eliminates the necessity for pre-scanning and increases the machine's productivity.

However, if the by-pass feed table is used, note that the machine assumes that the copy paper is lengthwise. For example, if A4 sideways paper is placed on the bypass tray, the machine assumes it is A3 paper and scans a full A3 area, disregarding the original size sensors. However, for each page, the data signal to the laser diode is stopped to match the copy paper length detected by the registration sensor. This means that copy time for the first page may be slower (because of the longer time required for scanning), but it will be normal for the rest of the job.

### 2.2 IMAGE PROCESSING

### 2.2.1 OVERVIEW

## Circuit

A250D500.WMF

The CCD generates an analog video signal. The SBU (Sensor Board Unit) converts the analog signal to an 8-bit digital signal, then it sends the digital signal to the BICU (Base-engine and Image Control Unit) board.
The BICU board is divided into two image processing blocks; the IPU (Image Processing Unit), and memory.

- IPU: Auto shading, filtering, magnification, gamma $(\gamma)$ correction, and gradation processing

Finally, the BICU board sends the video data to the LD unit at the correct time.
LD unit is divided into two blocks, VCU (Video Control Unit) and LD controller.

- VCU: $\quad$ FCI (Fine Character Image) - Smoothing, Printer gamma $(\gamma)$ correction
- LD controller: LD print timing control

## Image Quality Adjustments

The user can select text, text/photo, and photo mode, as usual. However, each of these original modes have a range of different types, as follows.

Image adjustment (08) in the user tools

| Mode |  | Default |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Text | Toner Saving | Normal | Sharp | (Service Mode) |
| Text/Photo | - | Photo Priority | Text Priority | (Service Mode) |
| Photo | Coarse | Press Print | Glossy Print | (Service Mode) |

The user can select the mode that best suits their original with the following user tool: User Tools - General Features - 08. Image Adjustment.

Notice that there is a "Service Mode" for each of the text, text/photo, and photo original modes. This is a customizable mode, with a range of SP modes that can be adjusted to meet user requirements that are not covered by the other original modes.

For details of the SP modes that can be used to adjust the image quality for all the original modes, see the Image Processing Summary section.

### 2.2.2 SBU (SENSOR BOARD UNIT)

A250D502.WMF

The CCD converts the light reflected from the original into an analog signal. The CCD line has 7,450 pixels and the resolution is 600 dpi ( 23.6 dots $/ \mathrm{mm}$ ).
The CCD has two output lines, for odd and even pixels, to the analog processing IC. The analog processing IC does the following to the signals from the CCD:

1. Z/C (Zero Clamp):

Adjusts the black level reference for even pixels to match the odd pixels.
2. Signal Composition:

A switching device merges the analog signals for the odd and even pixels from the CCD.
3. Signal Amplification:

Operational amplifiers in the AGC circuit amplify the analog signal. The CPU on the BICU board controls the maximum gains of the operational amplifiers.

After the processing mentioned above, the A/D converter converts the analog signals to 8 -bit signals. This gives a value to each pixel on a scale of 256 grades. Then, the digitized image data goes to the BICU board.

### 2.2.3 AUTO IMAGE DENSITY (ADS)

A250D004.WMF

## In the SBU

ADS prevents the background of an original from appearing on copies.
The copier scans the image density area [A] detected by the ADS sensoras shown in the diagram. This corresponds to a few mm at one end of the main scan line. As the scanner scans down the page, the IPU on the BICU detects the peak white level for each scan line. The IPU determines the reference value for the A/D conversion for a particular scan line using the peak white level for that scan line. Then, the IPU sends the reference value to the reference controller circuit on the SBU.

When scanning an original with a gray background, the density of the gray area is the peak white level density. Therefore, the original background will not appear on copies. ADS corrects for any changes in background density down the page, because peak level data is taken for each scan line.
As with previous digital copiers, the user can select manual image density when selecting auto image density mode and the machine will use both settings when processing the original.

## In the IPU

After the SBU process, the IPU board removes more background by adjusting the white level.

If the user selects a "Service Mode" original type with the user tools, these two ADS process can be either enabled or disabled (SP4-936, SP4-937), and the amount of white level change can be adjusted (SP4-938).

### 2.2.4 IMAGE PROCESSING UNIT (IPU)

## Overview

The image data from the SBU goes to the Image Processing Unit (IPU) IC on the BICU board, which carries out the following processes with the image data:

- Auto shading
- Scanner gamma ( $\gamma$ ) correction
- Magnification
- Filtering (MTF and smoothing)
- ID gamma ( $\gamma$ ) correction
- Binary picture processing
- Error diffusion
- Dithering
- Video path control
- Test pattern generation

The image data then goes to either the LD controller or the FCI depending on the selected copy modes.

## Auto Shading

As with previous digital copiers, there are two auto shading methods. One is black level correction and the other is white level correction. Auto shading corrects errors in the signal level for each pixel.

## Black Level Correction

The CPU reads the black dummy data from one end of the CCD signal ( 32 pixels at the end are blacked off) and takes the average of the black dummy data. Then, the CPU deletes the black level value from each image pixel.

## White Level Correction

Before scanning the original, the machine reads a reference waveform from the white plate. The average of the white video level for each pixel is stored as the white shading data in the FIFO memory in the IPU chip.
The video signal information for each pixel obtained during image scanning is corrected by the IPU chip.
Auto shading for the first original is done before the scanning.
After scanning every page, auto shading is done to prepare for the next page.
If the copy image density or the original mode is changed during copy run, the auto shading for the next scan is done before the scanning to respond to the mode changed.

## White Line Erase Compensation

During the white level correction, if extremely low CCD output is detected in some parts of the line, the machine assumes this is due to abnormal black lines on the white plate. This low output is corrected using neighboring pixels. To switch off this correction, use SP4-918 (for the original modes known as "Service Mode") and SP4-942 (other original modes).

## Black Line Erase Compensation

In ADF mode, if extremely low CCD output is detected on the scanning line before the leading edge of original arrives there, this is attributed to abnormal black dots on the exposure glass. This low output is corrected using neighboring pixels. To adjust or switch off this correction, use SP4-919 (for the original modes known as "Service Mode") and SP4-943 (other original modes).

## Scanner Gamma ( $\gamma$ ) Correction

The CCD output is not proportional to the quantity of the light received. Scanner gamma $(\gamma)$ correction corrects the CCD output so that grayscale data is proportion to the quantity of the light received.

The machine has four possible scanner gamma curves. The curve used by the machine depends on the original type selected by the user (at the operation panel and with 08. Image Adjustment in the user tools). If the user selects one of the original modes known as "Service Mode", the gamma curve can be selected with SP4-928.

If " 0 " is selected with SP 4-928, the scanner gamma curve is either AE or NAE, depending on the selected original mode (text, photo, etc.).
The four gamma $(\gamma)$ correction curves and their characteristics are as follows:

- Non Auto Exposure ID linear (NAE): Corrects the image data in proportion to the original density.
- Auto Exposure ID linear (AE): Removes the background from the image data to some extent and corrects the rest of the image data in proportion to the original density.
- Reflection Ratio ID Linear (Linear): Uses the image data without correction.
- Removed background (SP): Removes the background area completely and corrects the rest of the image data in proportion to the original density.

## Main Scan Magnification/Reduction

## Main Scan Magnification/Reduction

Changing the scanner speed enables reduction and enlargement in the sub-scan direction. However, the IPU chip handles reduction and enlargement in the main scan direction. The processing for main scan magnification/reduction is the same as in the previous digital machines.

When making a copy using the ADF, the magnification circuit creates a mirror image. This is because the scanning starting position in the main scan direction is at the other end of the scan line in ADF mode (compared with platen mode). In platen mode, the original is placed face down on the exposure glass, and the corner at $[\mathrm{A}]$ is at the start of the main scan. The scanner moves down the page. In ADF mode, the ADF feeds the leading edge of the original to the DF exposure glass, and the opposite top corner of the original is at the main scan start position.
To create the mirror image, the CPU stores each line a LIFO (Last In First Out) memory.

## Filtering

Image adjustment (08) in the user tools

| Mode |  | Default |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Text | Toner Saving | Normal | Sharp | (Service Mode) |
| Text/Photo | - | Photo Priority | Text Priority | (Service Mode) |
| Photo | Coarse | Press Print | Glossy Print | (Service Mode) |

## Overview

There are some software filters for enhancing the desired image qualities of the selected original mode. These filters are the MTF filter, the smoothing filter, and independent dot erase.
The MTF filter emphasizes sharpness and is used in Text and Text/Photo modes.
The smoothing filter is used in Photo mode, except for Glossy Photo mode (Glossy Photo mode is one of the photo modes that can be selected with User Tools General Features - 08. Image Adjustment). In Glossy Photo mode, the MTF filter is used.
Independent dot erase removes unwanted dots from the image.

## MTF Filter Adjustment - Text and Text/Photo Modes

When the user selects "Service Mode" for either Text or Text/Photo original type (User Tools - General Features - 08. Image Adjustment), the MTF filter and coefficient can be adjusted with SP4-915 and 4-916.
It is difficult to simply explain the relationships between the filter coefficient and filter strengths. Refer to the following charts to determine how to make the filters weaker or stronger. A large black dot indicates the default setting.
When the filter is stronger in the main scan direction, lines parallel to the feed direction are emphasized. When the filter is stronger in the sub-scan direction, lines at right angles to the feed direction are emphasized. A stronger MTF filter can make a low ID image visible but moiré may become more visible. Moiré is reduced using a smoothing filter specially designed for this purpose (see "Smoothing Filter Adjustment - Text/Photo").

2. Text/Phot in Service Mode

Smoothing Filter Adjustment - Photo Mode
Image adjustment (08) in the user tools

| Mode |  | Default |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Text | Toner Saving | Normal | Sharp | (Service Mode) |
| Text/Photo | - | Photo Priority | Text Priority | (Service Mode) |
| Photo | Coarse | Press Print | Glossy Print | (Service Mode) |

When the user selects "Service Mode" for Photo original type (User Tools - General Features - 08. Image Adjustment), the smoothing filter can be changed with SP4927. A stronger smoothing filter makes the image more blurred (1: Weak ~ 8:

Strong).

## Smoothing Filter Adjustment - Text and Text/Photo Modes

To reduce the possibility of moiré, a small-matrix smoothing filter is used after scanner gamma $(\gamma)$ correction in the Text and Text/Photo mode. The level of smoothing can be adjusted with SP4-921 (0: Weak, 1: Normal, 2: Strong, 3: Disabled).
This is only used when the user selects "Service Mode" for either Text or Text/Photo original type (User Tools - General Features - 08. Image Adjustment).

## Independent Dot Erase

In Text mode and in Text/Photo mode, independent dots are detected using a $7 \times 9$ matrix and erased from the image.

The independent dot detection level can be adjusted with SP4-917 (for the original modes known as "Service Mode") and SP4-944 (other original modes - on/off only; no adjustment). With a larger SP setting, more dots are detected as independent dots and erased, even if the dot's density is high. However, dots in mesh-like images may be detected as independent dots mistakenly.

## Independent Dot Erase after Binary Picture Processing

Image adjustment (08) in the user tools

| Mode |  | Default |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Text | Toner Saving | Normal | Sharp | (Service Mode) |
| Text/Photo | - | Photo Priority | Text Priority | (Service Mode) |
| Photo | Coarse | Press Print | Glossy Print | (Service Mode) |

Normally, independent dot erase is done in the filtering stage. However, when the user selects "Service Mode" for Text original type (User Tools - General Features 08. Image Adjustment), independent dots may reappear in the image after the binary picture processing. These independent dots are erased after gradation processing.
SP4-939 changes the filter that is used for this process, and it can be also used to disable this feature. A smaller matrix is more likely to remove dots.

## ID Gamma ( $\gamma$ ) Correction

## ID Gamma ( $\gamma$ ) Correction

Image adjustment (08) in the user tools

| Mode |  | Default |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Text | Toner Saving | Normal | Sharp | (Service Mode) |
| Text/Photo | - | Photo Priority | Text Priority | (Service Mode) |
| Photo | Coarse | Press Print | Glossy Print | (Service Mode) |

The machine automatically selects the most appropriate ID gamma correction based on the selected original type (and the user tool Image Adjustment setting) and ID setting made at the operation panel.
When the user selects "Service Mode" for any original type (User Tools - General Features - 08. Image Adjustment), you can use SP4-940 to change ID correction in service mode. The types that can be selected with SP4-940 are different for each original mode (Text, Text/Photo, or Photo).

## Gradation Processing

Image adjustment (08) in the user tools

| Mode |  | Default |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Text | Toner Saving | Normal | Sharp | (Service Mode) |
| Text/Photo | - | Photo Priority | Text Priority | (Service Mode) |
| Photo | Coarse | Press Print | Glossy Print | (Service Mode) |

## Overview

The 8 -bit image data is converted into 1 -bit data (there is no 8 -bit greyscale processing, only the 1 -bit process known as binary picture processing).
However, different techniques are used, depending on the selected original type (text, text/photo, photo) and user tool Image Adjustment setting.
These techniques are simple binary picture processing, error diffusion, and dithering. To see which process is used, see the flow charts in the Image Processing Summary section.

- Simple binary picture processing: Each video signal pixel is converted from 8-bit to 1-bit (black and white image data) in accordance with a threshold value.
- Error diffusion: Error diffusion is a more complex process using a threshold value and the values of nearby pixels in an $8 \times 8$ matrix. In text/photo mode, error diffusion reduces the difference in contrast between light and dark areas of a halftone image. In text mode, it prevents parts of low contrast text from disappearing from the copy.
- Dithering: Each pixel is compared with a pixel in a dither matrix.

In error diffusion or simple binary picture processing, there are two possible types of threshold: constant threshold, and dynamic threshold.

- The type that is used depends on the selected original type (text, text/photo, photo) and user tool Image Adjustment setting.
- However, if the user selects "Service Mode" for either Text or Text/Photo original type (User Tools - General Features - 08. Image Adjustment), the thresholding type can be changed with SP4-922.

Dithering is only used in Photo mode (except for Glossy Photo, in which error diffusion is used).

## Constant Threshold Value

If the constant threshold method is used, the threshold remains the same all the time.

The threshold can be adjusted with SP 4-923 when the user selects "Service Mode" for the Text original type (User Tools - General Features - 08. Image Adjustment).
Decreasing the threshold value creates a darker image.

## Dynamic Threshold Value

## Overview

Dynamic thresholding is designed to clearly separate text/vector graphic objects from the background.

## When used with simple binary picture processing (Sharp Text mode)

The software compares each pixel with the pixels immediately surrounding it. It is tested in four directions: horizontal, vertical, and in the two diagonal directions. If the image density difference between the object pixel and the surrounding pixels is more than a certain value in any one of these directions, the pixel is determined to be on an edge.

Pixels on the edge are treated with dynamic thresholding. The threshold is calculated by averaging the densities of pixels in the surrounding $7 \times 7$ area. However, the calculated threshold cannot exceed maximum and minimum limits; if it does, the upper or lower limit is used.
Pixels that are not on an edge are treated with a constant threshold value.
As a side-effect of the dynamic threshold process, copies of originals where the rear side is visible through the paper or the background is dark, may tend to have dirty background. In this case it is necessary to adjust the image density level with the image density key on the operation panel.

Instead of sharp text mode, if the user selects "Service Mode" for Text original type (User Tools - General Features - 08. Image Adjustment), some adjustments can be made.

- Edge detection: SP4-931 (vertical direction), 4-932 (horizontal direction), 4-933 (diagonal from top right to bottom left), 4-934 (diagonal from top left to bottom right). Decreasing the SP mode value causes a lighter line to be detected as an edge.
- Threshold limits for edges, and the threshold for non-edge pixels: SP4-924 (Max), 4-925 (Min), and 4-926 (Center, used for non-edge pixels). The closer that the upper or lower limit is adjusted to the center threshold, the fewer stains appear. However, a low ID contrast image cannot be copied.

## When used with error diffusion (Normal Text)

After error diffusion processing, dynamic thresholding uses 64 threshold values in an $8 \times 8$ matrix. This process prevents low contrast text from disappearing.
If the user selects "Service Mode" for Text/Photo original type and the thresholding type is changed from constant to dynamic, an error diffusion filter can be selected with SP4-929-1 (No.1: $4 \times 4$ matrix and No.2: $8 \times 8$ matrix). The two selections are prepared for future use to match original types which are not supported currently. Therefore, at this moment SP4-929-1 should not be used.

## Dithering

If the user selects "Service Mode" for Text/Photo original type, the dither matrix can be selected with SP4-929-2. A larger value for this SP mode increases the number of gradations. However, the image will not have much contrast.

### 2.2.5 MEMORY CONTROLLER AND EXTENDED MEMORY BOARD (EMB)

A250D528.WMF

The BICU consists of the memory controller and the DRAM. The functions of each device are as follows.

Memory Controller: Compressing the 1-bit image data Image rotation Image data transfer to the DRAM
DRAM (standard 16MB): Stores the compressed data Working area

The data goes to the memory controller after binary picture processing. The data is first compressed and then stored in the DRAM. When printing, the data from the DRAM goes back to the memory controller, where it is decompressed and image editing is done (e.g., image rotation, repeat image).

The memory capacity changes after installing optional memory on the BICU board, as follows.

|  |  | Standard (16 MB) | 16 MB + Optional <br> (64 MB total) |
| :---: | :---: | :---: | :---: |
| Number of pages | A4 6\% | 80 | 99 |
|  | ITU-T\#4 (12\% black) | 35 | 99 |

### 2.2.6 VIDEO CONTROL UNIT (VCU)

## Fine Character and Image (FCI)

The FCI performs image smoothing and line width correction. These functions only affect binary picture processed images in sharp text mode.

## Smoothing

Sub Scan
Fig. A

Fig. C

A250D554.WMF

Usually, binary picture processing generates jagged edges on characters, as shown in the above illustration. These are reduced using edge smoothing. The FCI changes the laser pulse duration and position for certain pixels.
Fig. A shows the four possible pulse durations, and Fig. B shows how the laser pulse can be in one of three positions within the pixel. Fig. C shows an example of how edge smoothing is used.
SP2-902 switches FCI smoothing on or off.

## Toner Saving in Text Mode

Image adjustment (08) in the user tools

| Mode |  | Default |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Text | Toner Saving | Normal | Sharp | (Service Mode) |
| Text/Photo | - | Photo Priority | Text Priority | (Service Mode) |
| Photo | Coarse | Press Print | Glossy Print | (Service Mode) |

When toner saving in text mode is selected in the image adjustment sub-menu (08) of the user tools menu, an $8 \times 8$ matrix filter reduces the number of black dots in the image. As a result, less toner is used to create the latent image on the drum.

## Printer Gamma ( $\gamma$ ) Correction

Printer correction corrects the data output from the IPU to the laser diode to account for the characteristics of the printer (e.g., the characteristics of the drum, laser diode, and lenses).
The machine chooses the most suitable gamma curve for the original type selected by the user. There is no SP adjustment for this.

### 2.2.7 IMAGE PROCESSING SUMMARY

## Text (Normal)

This mode decreases moiré and prevents parts of low contrast text from disappearing from the copy.
Recommended Originals: Normal text originals

A250D605.WMF

The "Toner Saving" setting uses the above processes, and also uses the toner saving matrix.

## Text (Sharp)

This mode prevents the rear side of a thin original from being visible, and the copy will have a lot of contrast.
Recommended Originals: Newspaper, originals through which the rear side is visible.

A250D614.WMF

### 2.3 LASER EXPOSURE

### 2.3.1 OVERVIEW

A250D000.WMF

This machine uses a laser diode to produce electrostatic images on the OPC drum $[A]$ in the all-in-one cartridge $[B]$. The laser diode unit [C] converts image data from the BICU board into laser pulses, and the optical components direct these pulses to the drum.
Laser beam exposure on the drum creates the latent image. The laser beam makes the main scan while drum rotation controls the sub-scan.

| Strength of the beam output | 5 mW |
| :--- | :---: |
| Strength of the beam on the drum | 0.636 mW |
| Printing | Binary |

Polygon mirror motor speed:

| Resolution (dpi) | Motor Speed (rpm) | Data Frequency (MHz) |
| :---: | :---: | :---: |
| 600 | 22478.22 | 22.0926 |

### 2.3.2 OPTICAL PATH

A250D306.WMF
[A]: Polygonal mirror
[B]: Cylindrical Iens
[C]: LD drive board
[D]: Drum
[E]: LD shutter
[F]: F-theta mirror

The optical path from the laser diode to the drum is shown above.
The LD drive board [C] outputs the laser beam to the polygonal mirror [A] through the cylindrical lens $[\mathrm{B}]$, which focus the laser beam.
The laser beam goes to the F-theta mirror [F], 1st mirror [H] and BTL [G]. Then, the beam reaches the drum [D] through the toner shield glass [J].
The beam reflected by the polygonal mirror writes the pixels of the latent image on the drum. The F-theta mirror [F] ensures constant intervals between the pixels. The BTL [G] corrects for irregularities in the polygonal mirror faces.
The laser synchronization detector [I] synchronizes the start of the main scan.

### 2.3.3 AUTO POWER CONTROL (APC)

A250D308.WMF

To prevent the intensity of the laser beam from changing because of the temperature, the machine monitors the laser beam with a photodiode (PD). The PD is enclosed in the laser diode. The PD passes an electrical current to the LD driver IC and this IC adjusts its output level to keep the laser diode output constant.
The laser diode power level is adjusted on the production line.
CAUTION: Do not touch the variable resistors on the LD unit in the field.

### 2.3.4 LD SAFETY SWITCH

A250D555.WMF

## Right Door Switch 1

To ensure that the laser beam does not inadvertently switch on during servicing, there is a safety switch inside the right door. The switch is in series on the LD 5 V line coming from the IOB through the BICU board.

## Mechanical Laser Shutter

When the all-in-one cartridge is removed, the laser shutter is released and this interrupts the laser beam.

### 2.4 ALL-IN-ONE CARTRIDGE (AIO CARTRIDGE)

### 2.4.1 OVERVIEW

A250D509.WMF

The AIO cartridge (all-in-one cartridge) consists of the components shown above. It contains the OPC drum and the toner cassette, and includes the mechanisms for drum charge, development, and cleaning. The drum is 30 mm in diameter.
[A]: Charge roller
[F]: Development roller
[B]: Cleaning blade
[G]: Mixing blade
[C]: OPC drum
[D]: Transfer roller
[H]: Toner near-end sensor
[E]: Transfer blade

The main motor drives the rollers in the AIO cartridge. The charge roller [A] charges the drum [C]. Monocomponent toner is used. The cleaning blade [B] cleans the drum surface.
To remove any remaining voltage on the drum surface, the laser diode periodically discharges the OPC drum. The interval can be changed with SP2-901. The default setting is every 25 pages; the machine will wait until the current job is finished.

### 2.4.2 DRIVE

A250D510.WMF

The main motor [A] drives the drum [B], the development roller [C], and agitators [D] through a series of gears. The BICU controls the main motor speed.

### 2.4.3 DRUM CHARGE

This machine uses a drum charge roller instead of a scorotron corona wire to charge the drum. The drum charge roller $[A]$ is always in contact with the surface of the drum $[B]$ because of the charge roller pressure springs [C], and it gives a negative charge to the drum surface. While the drum is rotating, the drum charge roller also turns because of friction between the roller and the drum.

The drum charge roller system generates less ozone than a scorotron corona wire charge. Consequently, this machine does not have an ozone filter.
The power supply board supplies a negative DC voltage to the drum charge roller through the charge roller terminal [D], pressure spring [C], and bushing [E]. This gives the drum surface a negative charge ( -600 V ).
The power supply board also applies AC voltage ( $1.6 \mathrm{kVp}-\mathrm{p} 1 \mathrm{kHz}$ ) to the charge roller. This AC removes any remaining voltage on the drum.

The AIO cartridge does not have a cleaning pad, temperature control, or a contact mechanism for the drum charge roller. The material the drum charge roller is made of enables the AIO cartridge to be a simple mechanism. The drum charge roller is part of the AIO cartridge, so when the toner runs out, the drum charge roller is changed at the same time. This happens before the drum charge roller gets dirty.

### 2.4.4 DEVELOPMENT

## Overview

A250D509.WMF

This machine uses monocomponent toner. There are two agitators $[A]$ in the AIO cartridge (shown above).

The agitator(s) $[\mathrm{A}]$ and the mixing blade $[\mathrm{B}]$ mix the toner in the AIO cartridge and transport it to the development roller [C]. Friction between the transported toner and the doctor blade [D] gives the toner a negative charge.
Internal permanent magnets in the development roller attract the toner to the development roller sleeve. The doctor blade trims the toner to the desired thickness on the development roller sleeve. The development roller does not contact the drum [E]. There is a small gap between the toner on the surface of the development roller sleeve and the drum. Toner jumps across this gap to develop the latent image.
The development bias consists of AC and DC components. The AC component improves the transfer of toner.
The transfer blade [F] is charged to the same voltage as the development bias. This helps to keep the toner on the drum.

The toner near-end sensor [G] is located under the toner cartridge.

## Toner End Detection

A250D666.WMF

There is no toner end sensor in this machine. Instead, toner end is detected using the toner near-end sensor.

When the toner near-end sensor detects a low toner condition for five seconds continuously [A], the machine starts the toner near-end copy counter.

From this point, toner near-end/end detection depends on the settings of SP2-213 and 2-214. The following describes what happens with the default settings.
If the toner concentration is still low after 210 copies, the machine detects a toner near-end condition [B]. The number of copies between starting the counter and toner near end [D] can be changed with SP2-214.
If the toner concentration is still too low 150 copies after toner near-end was determined, the machine detects a toner end condition [C]. If toner end is detected, the machine stops and copying/printing is disabled. The number of copies between toner near-end and toner end [E] can be changed with SP2-213.

The total number of copies between starting the copy counter and toner end [F] depends on the SP2-214 and SP2-213 settings. The default is $150+210=360$ copies.

The following table shows how the two SP modes can be used to customize the toner near-end and end intervals.

| SP2-213 setting (near-end to end) | SP2-214 setting (count start to near-end) |  |  |
| :---: | :---: | :---: | :---: |
|  | 0: Normal | 1: Low | 2: High |
| 0: 150 sheets | Start $\rightarrow$ near-end: 210 | Start $\rightarrow$ near-end: 350 | Start $\rightarrow$ near-end: 0 |
|  | Near-end $\rightarrow$ end: 150 | Near-end $\rightarrow$ end: 150 | Near-end $\rightarrow$ end: 150 |
|  | Total: 360 | Total: 500 | Total: 150 |
| 1: 50 sheets | Start $\rightarrow$ near-end: 310 | Start $\rightarrow$ near-end: 450 | Start $\rightarrow$ near-end: 70 |
|  | Near-end $\rightarrow$ end: 50 | Near-end $\rightarrow$ end: 50 | Near-end $\rightarrow$ end: 50 |
|  | Total: 360 | Total: 500 | Total: 120 |

|  | Near-end $\rightarrow$ end: 250 | Near-end $\rightarrow$ end: 250 | Near-end $\rightarrow$ end: 250 |
|  | Total: 360 | Total: 500 | Total: 250 |

Notes on how to customize the settings

- A higher 'Total' means that the user can use the cartridge for longer. However, copy quality may deteriorate before the toner end warning occurs.
- With a smaller number of copies between starting the counter and near-end, the user has an earlier warning that the toner is running out.
When the toner near-end sensor has detected a high toner condition for five continuous seconds, the machine does not check for toner end/near-end condition just after the main switch is turned on, or after the right door is opened and closed. The near-end copy count continues.
If the sensor detects a high toner condition for more than 30 seconds, the machine stops the near-end copy count. The counter is then reset and the near-end or end condition is changed.

## Toner Supply

The AIO cartridge agitators and mixing blade mix the toner in the AIO cartridge. The toner near-end sensor is not used to control toner supply. When the machine is turned on or the right door is closed, the agitators and the mixing blade rotate to mix the toner for a brief period.

## Development Bias

The high voltage supply unit gives the development roller a charge of -400 V DC and an AC component of $1.6 \mathrm{kVp}-\mathrm{p} 1 \mathrm{kHz}$. To prevent toner from transferring to non-image areas on the drum, the development bias is different for image and nonimage areas.

### 2.4.5 DRUM CLEANING

The cleaning blade [A] removes any toner remaining on the drum after the image is transferred to the paper. The cleaning blade scrapes off the remaining toner on the drum automatically transferring it to the collection area. The mylar sheet [B] prevents the toner from dropping out of the cleaning unit.
The toner cartridge in the AIO cartridge has a toner collection coil [C] and scraper [D]. These improve the collection of waste toner.
There is no toner recycling mechanism.

### 2.5 IMAGE TRANSFER AND PAPER SEPARATION

### 2.5.1 OVERVIEW

A250D513.WMF
The machine uses a transfer roller [A], which touches the surface of the drum [B]. The Power Pack - B/C/T supplies a positive current to the transfer roller, which attracts the toner from the drum onto the paper. The current depends on the paper width, paper type, and paper feed tray.

Drive from the drum through a gear turns the transfer roller. The antistatic brush [C] helps the paper to separate from the drum. The antistatic brush is grounded.

Use SP2-301 to adjust the transfer current. Note that when adjusting SP2-301-2 (by-pass tray), the transfer currents for both normal and thick paper are changed (but not the setting for "Special" paper - adjust that with SP2-301-5).

### 2.5.2 TRANSFER CURRENT SETTINGS

NOTE: 'Special' paper in the SP modes appears as "Dry" paper in the user tools.

| Paper Size | Paper Tray |  | By-pass Feed |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Normal <br> Paper | Special <br> Paper | Normal <br> Paper | Thick <br> Paper | Special <br> Paper |
| A3/11" $\times 17 "$, <br> A4/81/2 x 11"sideways | $11 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ | $12 \mu \mathrm{~A}$ | $5 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ |
| B4 | $11 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ | $13 \mu \mathrm{~A}$ | $5 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ |
| A4/11" $\times 81 / 2$ lengthwise, <br> A5/51/2 $\times 81 / 2$ sidewise | $11 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ | $14 \mu \mathrm{~A}$ | $7 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ |
| A5/81/2 $\times 51 / 2$ lengthwise, <br> A6 sideways | $11 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ | $17 \mu \mathrm{~A}$ | $17 \mu \mathrm{~A}$ | $25 \mu \mathrm{~A}$ |

Be careful when increasing the transfer current. This might cause a ghosting effect, in which part of the image at the top of the page is repeated lower down the page at a lower density. It may also damage the OPC drum in the worst case.

Notes on the 'Normal', 'Thick', and 'Special' paper settings
The by-pass tray allows a wider range of paper thickness, and the 'Normal' setting covers paper that is thicker than allowed in the standard tray
At normal temperatures, thicker paper needs a higher current for sufficient toner transfer.

However, at low and high temperatures, image problems occur. A lower current has been found to solve these problems (use the 'Thick' setting).

- Low temperatures: Blurred image
- High temperatures: Insufficient toner transfer

To summarize:

- Normal: Normal paper; also for thick paper at normal temperatures
- Thick: Thick paper at low and high temperatures, if those image problems occur Note that the fusing temperature increases if the 'Thick' setting is used.

## Special paper

The 'Special' paper setting is for use when a high transfer current is needed, to solve certain copy quality problems. It is not normally a good idea to use a high current, for the reason stated earlier, just below the table.

### 2.5.3 TRANSFER ROLLER CLEANING

If the paper size is smaller than the image, or if a paper jam occurs during printing, toner may be transferred to the roller surface. To prevent the toner from transferring to the back side of the printouts, the transfer roller requires cleaning before the next printing run.
During transfer roller cleaning, the high voltage supply unit supplies a negative cleaning voltage to the transfer roller. Any negatively charged toner on the transfer roller is then transferred back to the drum. Then a positive cleaning voltage is applied to the transfer roller to push back to the drum any positively charged toner on the transfer roller.

The machine goes through the cleaning mode in the following conditions:

- After a paper jam has been cleared.
- Just after the power is switched on.
- After 10 or more sheets of paper have been copied and the copy job has finished.
SP 2-910 determines how often the transfer roller is cleaned. If this is set to 1 , the transfer roller is cleaned after every job. If it is set to 0 , the roller is cleaned every 10 copies (the machine waits until the end of the job).

### 2.6 PAPER FEED

### 2.6.1 OVERVIEW

[E]
A250D201.WMF

There is a built-in paper tray (tray 1) [A] and a by-pass tray [B].
The paper tray holds 250 sheets. The by-pass tray can hold 100 sheets of paper. The paper feed roller [C] drives the top sheet of paper from the paper tray to the registration rollers [D].
The paper tray has a friction pad [E] that allows only one sheet to feed at a time.
When the paper tray is closed after the paper is loaded, the paper size actuator (behind the paper size indicator located at the front right of the tray) pushes the tray paper size switch. This informs the CPU that the tray is in place and what paper size is in the tray.

### 2.6.2 BUILT-IN TRAY

A250D104.WMF

## Bottom Plate Lift

The tray bottom plate [A] is lifted by a compressed spring, and it lifts the paper to the paper feed roller.

When the cassette is being pulled out, the tray bottom plate is dropped by the cassette arm [B], which is connected to the cassette lever (handle) [C], and is locked by the stopper [D].
When the cassette is put in the machine, the stopper is released and the tray bottom plate moves up.

## Paper End Detection

When the paper tray runs out of paper, the actuator for the paper end sensor [E] drops into the cutout in the tray bottom plate, activating the paper end sensor.

The paper near end sensor is on the machine frame above the back right corner of the cassette tray. The sensor is only used in printer mode.

## Paper Feed Drive

A250D518.WMF

The main motor drives the pick-up and feed mechanism. The tray paper feed clutch [A] transfers drive from the main motor to the paper feed roller [B].
This machine uses a feed roller and friction pad mechanism. The friction pad [C] only allows the top sheet to feed. Therefore, during paper feed, the top sheet of paper is separated from the stack and fed to the registration rollers [D].

When the paper actuates the registration sensor [E], the tray paper feed clutch turns off. When the paper reaches a certain position, the registration clutch [F] turns on to transfer drive from the main motor to the registration rollers. Then the registration rollers feed the paper to the image transfer area.

## Paper Size Detection

A250D108.WMF

The paper size switch $[\mathrm{A}]$ includes three sensors (microswitches). Actuators on a dial [B] behind the paper size indicator plate actuate the sensors.
Each paper size has its own actuator, with a unique combination of notches. To determine the paper size, the CPU reads which switches the actuator has turned off.

The CPU disables paper feed from a tray if the paper size cannot be detected. If the paper size actuator is broken, or if there is no tray installed, the printer control board recognizes that the paper tray is not installed.
When the paper size actuator is at the "*" mark, the paper tray can be set up to accommodate one of a wider range of paper sizes by using a user tool at the machine's operation panel.

| Models |  | Switch Location |  |  |
| :---: | :---: | :---: | :---: | :---: |
| North America | Europe | Left | Center | Right |

| 11" x 17" $\ddagger$ | A3 $\square^{\prime}$ | ON | ON | ON |

ON: Pushed OFF: Not Pushed

### 2.6.3 BY-PASS TRAY

## Drive

When paper is placed on the tray, the by-pass tray paper feeler [A] is pushed up and the actuator leaves the by-pass tray paper sensor [B].
The by-pass tray paper feed clutch [C] transfers drive from the main motor to the by-pass feed roller [D].
This machine uses a feed roller and friction pad mechanism, with drive from the main motor transmitted when the by-pass feed clutch turns on. The friction pad only allows the top sheet to feed to the registration rollers.
When the paper leading edge activates the registration sensor, the registration clutch [E] turns on.

## Paper Size Detection

A250D107.WMF

The by-pass feed paper width sensor monitors the paper width. The side fence is connected to the terminal plate gear. When the side fences move to match the paper width, the circular terminal plate rotates over the wiring patterns on the rectangular part of the width sensor. The patterns for each paper width on the paper width detection sensor are unique.

### 2.6.4 PAPER REGISTRATION

A250D518.WMF

Main motor rotation is transmitted to the registration clutch gear [A].
The registration sensor $[B]$ is just before the registration rollers [C].
When the paper leading edge activates the registration sensor, the registration clutch [D] turns on and the registration rollers start turning a little bit afterward. However, the tray paper feed roller clutch stays on for a bit longer. This delay allows time for the paper to press against the registration rollers and buckle slightly to correct skew. Use SP1-003 to adjust the amount of paper buckle.
The registration clutch then energizes at the proper time to align the paper with the image on the drum. The registration rollers feed the paper to the image transfer area.

The registration sensor is also used for paper misfeed detection.

### 2.6.5 MISFEED DETECTION

A250D603.WMF

| Misfeed | Operation panel | Vertical transport cover | Right cover | Optional paper unit | 1 bin sorter door |

## Registration sensor ON check

When the registration sensor does not turn on within a certain time after the paper feed clutch turns on (1st tray: 2.0 s , 2nd tray: 1.3 s , 3rd tray: 1.7 s ).

## Registration sensor OFF check

During multi-page printing, the registration sensor is not turned off by the trailing edge of the current page after the paper feed clutch turns on to feed the next page. After the registration sensor turns on, it does not turn off within 0.8 seconds after the expected time, which is calculated from the paper length.

## Fusing exit sensor ON check

When the fusing exit sensor does not turn on within 2.5 seconds after the registration clutch turns on.

## Fusing exit sensor OFF check

During multi-page printing, the fusing exit sensor is not turned off by the trailing edge of the previous page after the designated time.
The fusing exit sensor does not turn off within 0.9 seconds after the sensor-off time occurs. This time is calculated from the paper length.

## Vertical transport sensor ON check

When the vertical transport sensor does not turn on within 1.5 seconds after the 2nd paper feed clutch turns on.

## Vertical transport sensor OFF check

When the vertical transport sensor does not turn on within 1.8 seconds after the vertical transport sensor (optional PFU) turns on.

## Vertical transport sensor (optional PFU) ON check

When the vertical transport sensor (optional PFU) does not turn on within 1.5 seconds after the 3rd paper feed clutch turns on.

## Vertical transport sensor (optional PFU) OFF check

During multi-page printing, the vertical transport sensor (optional PFU) is not turned off by the trailing edge of the previous page after the designated time.

## 1 bin tray exit sensor ON check

When the 1 bin tray exit sensor does not turn on within 1.8 seconds after the fusing exit sensor turns on.

## 1 bin tray exit sensor OFF check

During multi-page printing, the 1-bin tray exit sensor is not turn off by the trailing edge of the previous page after the designated time.
The sensor does not turn off within 1.0 seconds after the sensor-off time occurs. This time is calculated from the paper length.

### 2.7 IMAGE FUSING

### 2.7.1 OVERVIEW

The fusing unit consists of the following parts.

1. Pressure Roller Release Lever
2. Hot Roller
3. Pressure Spring
4. Exit Roller
5. Fusing Lamp
6. Fusing Thermistor
7. Thermofuse
8. Fusing Exit Sensor
9. Hot Roller Strippers
10. Pressure Roller

After the image has been transferred, the paper enters the fusing unit. The image is fused to the paper by applying heat and pressure through the combined use of the hot roller $[A]$, fusing lamp $[B]$, and pressure roller.
The CPU monitors the hot roller temperature through the fusing thermistor [C], which is in contact with the hot roller surface. The thermofuse [D] protects the fusing unit from overheating.

### 2.7.2 FUSING UNIT DRIVE

The main motor drives the hot roller [A] through a train of gears.
The hot roller drives the exit roller $[B]$ through a gear.

### 2.7.3 PRESSURE ROLLER/PAPER EXIT

A250D505.WMF

During printing, the pressure roller $[A]$ is pressed against the hot roller $[B]$ by springs.
The hot roller strippers [C] separate the paper from the hot roller and direct it to the exit roller. Then the exit roller feeds the paper to the paper tray.

### 2.7.4 FUSING UNIT DRIVE RELEASE

A250D331.WMF

When the pressure roller release levers [A] are pushed down, the pressure roller moves away so jammed paper can be removed.

### 2.7.5 FUSING TEMPERATURE CONTROL

## Overview

A250D328.WMF

The fusing temperature is controlled using the fusing thermistor $[A]$.
The CPU checks the output from the fusing thermistor once a second. The CPU compares the current and previous temperature, then decides the power-on ratio for the next second. To maintain the target temperature, the CPU controls the fusing lamp power-on ratio as shown in the following table (the temperature control algorithm only works with whole numbers).

## Initializing

Sampling cycle: 1 second
Soft start setting: 6 cycles

|  | Current minus Target |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Previous minus Current | $-\mathbf{3}^{\circ} \mathrm{C}$ or <br> more | $\mathbf{- 2} \mathbf{C}$ or <br> $-\mathbf{1 0}^{\circ} \mathrm{C}$ | $\mathbf{0}$ | $\mathbf{}^{\circ} \mathrm{C}$ or <br> $+\mathbf{2}^{\circ} \mathrm{C}$ | $+\mathbf{3}^{\circ} \mathrm{C}$ or <br> more |
| $-3^{\circ} \mathrm{C}$ or more | $100 \%$ | $50 \%$ | $0 \%$ | $0 \%$ | $0 \%$ |
| $-2^{\circ} \mathrm{C}$ or $-1^{\circ} \mathrm{C}$ | $100 \%$ | $50 \%$ | $0 \%$ | $0 \%$ | $0 \%$ |
| 0 | $100 \%$ | $50 \%$ | $0 \%$ | $0 \%$ | $0 \%$ |
| $+1^{\circ} \mathrm{C}$ or $+2^{\circ} \mathrm{C}$ | $100 \%$ | $50 \%$ | $0 \%$ | $0 \%$ | $0 \%$ |
| $+3^{\circ} \mathrm{C}$ or more | $100 \%$ | $50 \%$ | $0 \%$ | $0 \%$ | $0 \%$ |

Ratio (\%): The proportion of time that the fusing lamp power is on

## Copying (North America Model)

Sampling cycle: 1 second
Soft start setting: 6 cycles

|  | Current minus Target |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Previous minus Current | $\mathbf{- 3}{ }^{\circ} \mathrm{C}$ or <br> more | $\mathbf{- 2} \mathbf{C}$ or <br> $\mathbf{- 1} \mathbf{1 0}^{\circ} \mathbf{C}$ | $\mathbf{0}$ | $\mathbf{1}^{\circ} \mathrm{C}$ or <br> $+\mathbf{2}^{\circ} \mathbf{C}$ | $+\mathbf{3}^{\circ} \mathbf{C}$ or <br> more |
| $-3^{\circ} \mathrm{C}$ or more | $100 \%$ | $100 \%$ | $100 \%$ | $100 \%$ | $0 \%$ |
| $-2^{\circ} \mathrm{C}$ or $-1^{\circ} \mathrm{C}$ | $100 \%$ | $70 \%$ | $70 \%$ | $70 \%$ | $0 \%$ |
| 0 | $100 \%$ | $50 \%$ | $30 \%$ | $30 \%$ | $0 \%$ |
| $+1^{\circ} \mathrm{C}$ or $+2^{\circ} \mathrm{C}$ | $100 \%$ | $30 \%$ | $0 \%$ | $0 \%$ | $0 \%$ |
| $+3^{\circ} \mathrm{C}$ or more | $100 \%$ | $0 \%$ | $0 \%$ | $0 \%$ | $0 \%$ |

Ratio (\%): The proportion of time that the fusing lamp power is on

## Copying (Europe Model)

Sampling cycle: 1 second
Soft start setting: 10 cycles

|  | Current minus Target |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Previous minus Current | $-3^{\circ} \mathrm{C}$ or more | $\begin{gathered} -2^{\circ} \mathrm{C} \text { or } \\ -1^{\circ} \mathrm{C} \end{gathered}$ | 0 | $\begin{aligned} & +1^{\circ} \mathrm{C} \text { or } \\ & +2^{\circ} \mathrm{C} \end{aligned}$ | $+3^{\circ} \mathrm{C} \text { or }$ more |
| $-3^{\circ} \mathrm{C}$ or more | 100\% | 100\% | 100\% | 0\% | 0\% |
| $-2^{\circ} \mathrm{C}$ or $-1^{\circ} \mathrm{C}$ | 100\% | 100\% | 100\% | 0\% | 0\% |
| 0 | 100\% | 100\% | 100\% | 0\% | 0\% |
| $+1^{\circ} \mathrm{C}$ or $+2^{\circ} \mathrm{C}$ | 100\% | 100\% | 100\% | 100\% | 0\% |
| $+3^{\circ} \mathrm{C}$ or more | 100\% | 100\% | 100\% | 100\% | 0\% |

Ratio (\%): The proportion of time that the fusing lamp power is on

## Standby

Sampling cycle: 1 second (Europe model: 3 seconds)
Soft start setting: 6 cycles (Europe model: 20 cycles)

|  | Current minus Target |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Previous minus Current | $\begin{gathered} -3^{\circ} \mathrm{C} \text { or } \\ \text { more } \end{gathered}$ | $\begin{gathered} -2^{\circ} \mathrm{C} \text { or } \\ -1^{\circ} \mathrm{C} \end{gathered}$ | 0 | $\begin{gathered} +1^{\circ} \mathrm{C} \text { or } \\ +2^{\circ} \mathrm{C} \end{gathered}$ | $+3^{\circ} \mathrm{C} \text { or }$ more |
| $-3^{\circ} \mathrm{C}$ or more | 100\% | 100\% | 0\% | 0\% | 0\% |
| $-2^{\circ} \mathrm{Cor}-1^{\circ} \mathrm{C}$ | 100\% | 100\% | 0\% | 0\% | 0\% |
| 0 | 100\% | 100\% | 0\% | 0\% | 0\% |
| $+1^{\circ} \mathrm{C}$ or $+2^{\circ} \mathrm{C}$ | 100\% | 100\% | 100\% | 0\% | 0\% |
| $+3^{\circ} \mathrm{C}$ or more | 100\% | 100\% | 100\% | 0\% | 0\% |

Ratio (\%): The proportion of time that the fusing lamp power is on

## Fluorescent Lamp Flicker

Starting and stopping the fusing lamp power every second causes fluorescent lighting in the room to flicker. To reduce this flickering, use SP1-108 to change the cycle from 1 second to 3 seconds.
In addition, full power is applied to the fusing lamp gradually, not all at once. This prevents the power in the room from dropping suddenly. This feature is known as "Soft Start". The machine does this by gradually allowing more power to the fusing lamp over a number of zero-cross cycles of the ac supply. The diagram below shows full power being applied gradually over the duration of 6 zero-cross cycles. With SP1-107, this number can be set to 6,10 , or 20 .

A250D888.WMF

## Fusing Temperature Control for Thick Paper at the By-pass Tray

When thick paper mode is selected, the machine changes the target fusing temperature from $180^{\circ} \mathrm{C}$ to $190^{\circ} \mathrm{C}$.
This also happens when the machine detects $A 6$ size. This is because the machine automatically assumes that the A6 paper is a post card, and post cards should be treated as thick paper.

## Pre-heat Mode (Fusing Idling)

When the machine is powered on, or the right door is closed, the hot roller turns for 10 seconds.

If the SP1-103 setting is 1 (Yes), when the fusing thermistor detects a temperature lower than $60^{\circ} \mathrm{C}$, the hot roller turns for 60 seconds (instead of for just 10 s ) after the machine is powered on, or the right door is closed. This maintains conditions for fusing copies made on thick paper during cold weather conditions.

## To Prevent Offset when Making Multiple Copies on Small Paper

This prevents the temperature at the ends of the hot roller from being higher than at the center.

If the smallest copy paper width detected during a one-minute interval is less than 220 mm , the machine lowers the target fusing temperature by $10^{\circ} \mathrm{C}$.

Then, during the next minute, if the smallest width detected is less than 220 mm again, the machine lowers the target temperature by another $5^{\circ} \mathrm{C}$.

### 2.7.6 OVERHEAT PROTECTION

If the hot roller temperature becomes greater than $230^{\circ} \mathrm{C}$ for more than 1 second, the CPU cuts off the power to the fusing lamp. At this time, the LCD will display an SC543 error.

Even if the thermistor overheat protection fails, there is a thermofuse in series with the common ground line of the fusing lamp. If the temperature of the thermofuse reaches $169^{\circ} \mathrm{C}$, the thermofuse opens, removing power from the fusing lamp. At this time, the printer stops.

### 2.7.7 ENERGY SAVER MODE

When the machine is not being used, the energy saver function reduces power consumption by decreasing the fusing unit temperature.

## Entering Energy Saver Mode and Auto Shut Off Mode

Energy saver mode starts after the machine has been idle for a certain time. The user specifies this time. The following choices are available.

- Off (energy saver mode never activates)
- 1 minutes to 240 minutes

This feature is adjusted using the user tools at the operation panel. Then, when the Auto Off timer (SP5-904, or a user tool setting) runs out, the machine turns off the main power switch.
Auto Shut Off mode can be disabled with a user tool (System Settings - 10. AOF).

## Returning to Standby Mode

## From Energy Saver Level 1 or 2

If one of the following is done, the machine returns to standby mode.

- Pressing the Energy Saver key
- Opening and closing the tray cover
- Placing an original in the ADF
- Lifting up the ADF

## From Auto Shut Off Mode

The machine returns to the ready condition when the main switch is turned back on.

## 3. INSTALLATION

## CAUTION

Before installing options, do the following:

1. If there is a fax unit in the machine, print out all messages stored in the memory, the lists of user-programmed items, and the system parameter list.
2. If there is a printer option in the machine, print out all data in the printer buffer.
3. Turn off the main switch and disconnect the power cord, the telephone line, and the network cable.

### 3.1 INSTALLATION REQUIREMENTS

### 3.1.1 ENVIRONMENT

- Temperature and Humidity Chart -

A2501502.WMF

1. Temperature Range: $10^{\circ} \mathrm{C}$ to $32^{\circ} \mathrm{C}\left(50^{\circ} \mathrm{F}\right.$ to $\left.89.6^{\circ} \mathrm{F}\right)$
2. Humidity Range: $15 \%$ to $80 \%$ RH
3. Ambient lllumination: Less than 1,500 lux (do not expose to direct sunlight.)
4. Ventilation: Room air should turn over at least $30 \mathrm{~m}^{3} / \mathrm{hr} /$ person
5. Ambient Dust: Less than $0.10 \mathrm{mg} / \mathrm{m}^{3}\left(2.7 \times 10^{-6} \mathrm{oz} / \mathrm{yd}^{3}\right)$
6. Avoid areas exposed to sudden temperature changes. This includes:
1) Direct exposure to cool air from an air conditioner.
2) Direct exposure to heat from a heater.
7. Do not place the machine in an area where there are corrosive gasses.
8. Do not install the machine at any location over $2,000 \mathrm{~m}(6,500 \mathrm{ft}$ ) above sea level.
9. Place the copier on a strong and level base. (Inclination on any side should be no more than 5 mm .)
10. Do not place the machine where it may experience strong vibrations.

### 3.1.2 MACHINE LEVEL

1. Front to back: Within $5 \mathrm{~mm}(0.2$ ") of level
2. Right to left: Within $5 \mathrm{~mm}\left(0.2^{\prime \prime}\right)$ of level

### 3.1.3 MINIMUM SPACE REQUIREMENTS

Place the copier near the power source, providing clearance as shown:

A2501145.WMF
A: In front : Over 750 mm (29.6")
C: To rear: Over 10 mm (0.4")
B: Left: Over 20 mm (0.8")
D: Right: Over 10 mm (0.4")

NOTE: 1) The 750 mm recommended for the front space is for pulling out the paper tray only. If an operator stands in front of the copier, more space is clearly necessary.
2) The 20 mm recommended for the left space is when the user does not use $\mathrm{A} 3 / 11^{\prime \prime} \times 17^{\prime \prime}$ paper. If a user uses A3/11" x 17 " paper with optional 1 -bin sorter, more than 60 mm of space is necessary.
3) The 10 mm recommended for the right space is for installation only. If an operator fixes a paper jam, uses the by-pass tray, or changes the AIO, more space is necessary.

### 3.1.4 POWER REQUIREMENTS

CAUTION: 1) Make sure that the wall outlet is near the copier and easily accessible. Make sure the plug is inserted firmly in the outlet.
2) Avoid multi-wiring.
3) Be sure to ground the machine.
$\begin{array}{lll}\text { 1. Input voltage level: } & 120 \mathrm{~V}, 60 \mathrm{~Hz}: & \text { More than } 10 \mathrm{~A} \text { (North America) } \\ & 220 \sim 240 \mathrm{~V}, 50 / 60 \mathrm{~Hz} \text { : More than } 6 \mathrm{~A} \text { (Europe/Asia) } \\ & 110 \mathrm{~V}, 50 / 60 \mathrm{~Hz}: & \text { More than } 11 \mathrm{~A} \text { (Taiwan) }\end{array}$

### 3.2 COPIER INSTALLATION <br> 3.2.1 ACCESSORY CHECK

Check the quantity and condition of the accessories in the box against the following list:
Description Quantity

1. Operation Instructions - System Setting ..... 1
2. Operation Instructions - Copy Reference ..... 1
3. Operation Instructions - Copy Quick Guide ..... 1
4. User Survey Card (-17 machine) ..... 1
5. NECR - English (-17 machine) ..... 1
6. NECR - Multi-language (-19, -27, -29, -69) ..... 1
7. Model Name Decal (-10, -15, -22) ..... 1

### 3.2.2 COPIER INSTALLATION PROCEDURE

## . CAUTION

Rating voltage for peripherals
Make sure to plug the cables into the correct sockets.

A2501210.WMF

NOTE: Since the installation procedure is not a copier accessory, always bring this manual with you.

## $\triangle$ CAUTION <br> When installing the copier, make sure to keep the power cord unplugged.

1. Remove the tape strips.

A2501501.WMF

2. Pull the paper tray $[A]$ out and turn the paper size dial $[B]$ to select the appropriate size. Adjust the side guides [C] and end guide [D] to match the paper size.

A2501190.WMF

A2501191.WMF
A2501192.WMF
3. Open the right door $[\mathrm{A}]$.
4. Shake the toner cartridge $[B]$ well several times.
5. Pull out horizontally and remove the tape [C] inside the toner cartridge, as shown.
6. Install the toner cartridge $[D]$ in the copier.
7. Close the right door.
8. Install the ADF (refer to ADF Installation, section 3.3) or platen cover (refer to Platen Cover Installation, section 3.7).
9. Turn the operation and main switches on, and check the copy quality and copying functions.
10. Initialize the electrical total counter using SP7-825.

### 3.3 ADF INSTALLATION

### 3.3.1 ACCESSORY CHECK

Check the quantity and condition of the accessories in the box against the following list:
Description Quantity

1. Stepped Screw........................................................................ 2
2. Knob Screw............................................................................... 2
3. Driver Tool ................................................................................. 1
4. DF Exposure Glass................................................................. 1
5. Decal - Exposure Glass ........................................................... 1
6. Decal-Scale - mm.................................................................... 1
7. Decal - Scale - inch.................................................................. 1
8. Scale Guide .............................................................................. 1
9. Installation Procedure .............................................................. 1

### 3.3.2 ADF INSTALLATION PROCEDURE

A8591101.WMF

1. Remove the strips of tape.

A8591110.WMF
2. Remove the left scale [A] (2 screws).
3. Place the DF exposure glass $[B]$ on the glass holder.

NOTE: When installing the DF exposure glass, make sure that the white point [C] is positioned at the lower front side, as shown.
4. Peel off the backing $[\mathrm{D}]$ of the double side tape attached to the rear side of the scale guide [E], then install the scale guide (2 screws removed in step 2).
5. Install the two stud screws [F].
6. Mount the DF by aligning the holes [G] in the DF with the stud screws, then slide the DF to the front as shown.
7. Secure the DF unit with two screws $[\mathrm{H}]$.
8. Connect the cable [l] to the copier.

A8591102.WMF
9. Attach the decal $[A]$ as shown.
10. Plug in the power cord, then turn the main switch on.
11. Make a full size copy from the 1st tray using the ADF. Then check to make sure the side-to-side and leading edge registrations are correct. If they are not, adjust their values (SP6-006).
3.4 PAPER TRAY UNIT (1 TRAY) INSTALLATION
3.4.1 ACCESSORY CHECK
Check the quantity and condition of the accessories in the box against the followinglist:
Description Quantity

1. Screw - M4 x 10 ..... 4
2. Joint Bracket ..... 2
3. Installation Procedure ..... 1

### 3.4.2 PAPER TRAY UNIT INSTALLATION PROCEDURE

[^0]
## $\triangle$ CAUTION

Before installing this option, do the following:

1. If there is a fax unit in the machine, print out all messages stored in the memory, the lists of user-programmed items, and the system parameter list.
2. If there is a printer option in the machine, print out all data in the printer buffer.
3. Turn off the main switch and disconnect the power cord, the telephone line, and the network cable.
4. Remove the strips of tape.

A861I163.WMF
2. Remove the cover $[A]$ (1 screw) and pull out the cable $[B]$.
3. Set the copier [C] on the paper tray unit [D].

NOTE: When installing the copier, be careful not to pinch the cable [B].
4. Remove the 1st cassette tray $[E]$.

A861I152.WMF

A861I164.WMF
5. Install the two stepped screws [A].
6. Re-install the 1 st cassette tray.
7. Install the two brackets $[B]$ (1 screw each).
8. Connect the cable [C] to the copier, as shown.

NOTE: There are cutouts on both sides of the connector. The left side has one cutout and the right side has two.
9. Re-install the cover removed in step 2 ( 1 screw).
10. Make a full size copy from the 2nd tray. Then check that the side-to-side registration is correct. If it is not, adjust the value (SP1-002).
3.5 PAPER TRAY UNIT (2 TRAYS) INSTALLATION
3.5.1 ACCESSORY CHECK
Check the quantity and condition of the accessories in the box against the followinglist:
Description Quantity

1. Screw - M4 x 10 ..... 4
2. Screw - M4 x 5 ..... 8
3. Joint Bracket ..... 2
4. Unit Holder ..... 4
5. Installation Procedure ..... 1

### 3.5.2 PAPER TRAY UNIT INSTALLATION PROCEDURE

A860I158.WMF

1. Remove the strips of tape.

A860I163.WMF
2. Remove the cover $[A]$ ( 1 screw) and pull out the cable $[B]$.
3. Set the copier [C] on the paper tray unit [D].

NOTE: When installing the copier, be careful not to pinch the cable [B].
4. Remove the 1st cassette tray [E].

A8601151.WMF

A8601162.WMF
5. Install the two stepped screws [A].
6. Re-install the 1 st tray cassette.
7. Install the two brackets $[B]$ (1 screw each).

A8601164.WMF

A8601007.WMF
8. Connect the cable [A] to the copier, as shown.

NOTE: There are cutouts on both sides of the connector. The left side has one cutout, and the right side has two.
9. Re-install the cover removed in step 2 ( 1 screw).
10. Install the four brackets [B] (2 screws each).
11. Make a full size copy from the 2nd and 3rd trays. Then check that the side-toside registration is correct. If it is not, adjust the value (SP1-002).

### 3.6 1-BIN SORTER INSTALLATION <br> 3.6.1 ACCESSORY CHECK

Check the quantity and condition of the accessories in the box against the following list:
Description Quantity

1. Screw - M3 $\times 6$ ..... 1
2. Installation Procedure ..... 1

### 3.6.2 1-BIN SORTER INSTALLATION PROCEDURE

A8691173.WMF

1. Remove the strips of tape.

NOTE: There is a screw in the plastic bag [A].

A8691117.WMF

A869I105.WMF
2. Open the right door $[A]$.
3. Release the levers $[B]$ and remove the fusing unit [C] (2 screws).
4. Remove the small front cover [D] (1 screw).
5. Remove the cap [E] with a wire cutter [F].

A8691106.WMF
6. Remove the cap $[A]$ with a wire cutter $[B]$.
7. Remove the cover [C] (1 rivet [D]).

A869I107.WMF

A8691108.WMF
8. Connect the connector [A] for the 1-bin sorter unit [B], as shown.

NOTE: Before installing the 1-bin sorter unit, check that the component under the connector $[A]$ is not bent.
9. Set the pins [C] for the 1-bin sorter unit and secure the unit with the screw from the accessories [D].

A8691109.WMF

A8691174.WMF
10. Install the bin [A], as shown.

NOTE: Mount the bin on the 1 -bin sorter unit.
11. Re-install the small front cover and fusing unit.

NOTE: When re-installing the small front cover, be careful not to pinch the cable.
12. Close the right door.
13. Plug in the copier and turn on the main switch.
14. Place the paper on the 1 -bin sorter and check that the LED $[B]$ is green.

### 3.7 PLATEN COVER INSTALLATION

### 3.7.1 ACCESSORY CHECK

Check the quantity and condition of the accessories in the box against the following list:

Description
Quantity

1. Stepped Screw............................................................................. 2

### 3.7.2 PLATEN COVER INSTALLATION PROCEDURE

A2501111.WMF

1. Install the platen cover [A] (2 screws).

### 3.8 EXTENDED MEMORY BOARD INSTALLATION 3.8.1 ACCESSORY CHECK

Check the quantity and condition of the accessories in the box against the following list:

Description
Quantity

1. Screw - M3 $\times 6$ (two of these are not for use with A250)............... 4
2. Bracket (not for A250) ................................................................... 1
3. Installation procedure ................................................................... 1

### 3.8.2 EXTENDED MEMORY BOARD INSTALLATION PROCEDURE

A8871176.WMF

A8871113.WMF

NOTE: If a printer unit, fax unit, or ISDN G4 unit was installed, remove them before installing the extended memory board.

1. Remove the left cover $[A]$, as shown (1 screw).
2. Install the extended memory board $[B]$ (2 screws).
3. Re-install the left cover.

### 3.9 DRUM HEATER INSTALLATION (OPTION)

[B] $[A]$
A2501001.WMF

1. Remove the left cover, copy tray, and front cover. (See Exterior Removal, section 6.1.)
2. Remove the AIO cartridge.
3. Remove the fusing unit. (Refer to Fusing Unit Removal, section 6.5.1.)
4. Pass the connector $[A]$ through the opening $[B]$ under the LD unit.
5. Install the anti-condensation heater [C] ( 2 screws - M3 $\times 6$ ).
6. Remove the cable $[D]$ from the clamp $[E]$, then join the connectors $[A, F]$.
7. Clamp the cable to the clamp [G].
8. Re-install the fusing unit, AIO cartridge, left cover, copy tray and front cover.

### 3.10 OPTICS ANTI-CONDENSATION HEATER INSTALLATION (OPTION)

1. Remove the exposure glass. (See Exposure Glass Removal, section 6.2.1.)
2. Remove the rear cover. (See Rear Cover Removal, section 6.1.1.)
3. Pass the connector $[\mathrm{A}]$ through the opening $[\mathrm{B}]$.
4. Install the optics anti-condensation heater [C], as shown.
5. Join the connectors $[A, D]$.
6. Re-install the exposure glass.

### 3.11 TRAY HEATER INSTALLATION

1. Remove the rear cover for the paper tray unit [A] (2 screws).

## - 1-tray paper feed unit -

A250I004.WMF
2. Two-tray unit only: Remove the cable guide $[A]$ (1 screw).
3. Install the clamps $[\mathrm{B}]$.

- 1-tray paper feed unit -
[B]

- 2-tray paper feed unit -
[B]

A250I009.WMF

A250I005.WMF
4. Pass the connector $[\mathrm{A}]$ through the opening $[\mathrm{B}]$.
5. Install the tray heater [C] (1 screw).

- 1-tray paper feed unit -

- 2-tray paper feed unit -

6. Clamp the cables $[A]$, as shown.
7. Join the connectors $[B]$.
8. Two-tray unit only: Re-install the cable guide.

## - 1-tray paper feed unit -

- 2-tray paper feed unit A250l150.WMF

9. Remove the two screws $[A]$ from the rear side of the paper feed unit.

A2501003.WMF
10. Remove the 1st tray.
11. Remove the two screws $[A]$ and install the two screws $[B]$ which were removed in step 9.
12. Re-install the 1 st tray and rear cover.

## 4. SERVICE TABLES

### 4.1 GENERAL CAUTION

Do not turn off the main switch while any of the electrical components are active. Doing so might cause damage to units, such as the AIO, when they are pulled out of or put back into the copier.

### 4.1.1 AIO CARTRIDGE (ALL-IN-ONE CARTRIDGE)

The AIO cartridge consists of the OPC drum, development unit, charge roller, cleaning blade, toner supply mechanism, and toner collection area. Follow the cautions below when handling an AIO cartridge.

1. Store the AIO cartridge in a cool, dry place away from heat.
2. Dispose of used AIO cartridges in accordance with local regulations.

### 4.1.2 TRANSFER ROLLER UNIT

1. Never touch the transfer roller surface with bare hands.
2. Take care not to scratch the transfer roller as the surface is easily damaged.

### 4.1.3 SCANNER UNIT

1. Clean the exposure glass with alcohol or with glass cleaner to reduce the amount of static electricity on the surface of the glass.
2. Use a blower brush or a cotton pad with water to clean the mirrors and lens.
3. Do not bend or crease the exposure lamp flat cable.
4. Do not disassemble the lens unit. Doing so will throw the lens and the copy image out of focus.
5. Do not turn any of the CCD positioning screws. Doing so will throw the CCD out of position.

### 4.1.4 LASER UNIT

1. Do not loosen the screws that secure the LD drive board to the laser diode casing. Doing so would throw the LD unit out of adjustment.
2. Do not adjust the variable resistors on the LD unit, as they are adjusted in the factory.
3. The polygon mirror and F-theta mirror are very sensitive to dust.
4. Do not touch the glass surface of the polygon mirror motor unit with bare hands.

### 4.1.5 FUSING UNIT

1. After installing the fusing thermistor, make sure that it is in contact with the hot roller and that it rotates freely.
2. Be careful not to damage the edges of the hot roller strippers or their tension springs.
3. Do not touch the fusing lamp and rollers with bare hands.
4. Make sure that the fusing lamp is positioned correctly and that it does not touch the inner surface of the hot roller.

### 4.1.6 PAPER FEED

1. Do not touch the surface of the paper feed roller.
2. The side fences and end fences of the paper tray must be positioned correctly to align with the actual paper size to avoid paper misfeeds.

### 4.1.7 OTHERS

1. If the optional tray, drum, and optics anti-condensation heaters have been installed, keep the copier power cord plugged in, even when the copier main switch is turned off. This keeps the heaters energized.

### 4.2 SERVICE PROGRAM MODE

### 4.2.1 SERVICE PROGRAM MODE OPERATION

The service program (SP) mode is used to check electrical data, change modes, and adjust values.

## Service Program Access Procedure

## How to Enter the SP Mode

Press the following keys in sequence.

- Hold the (Clear/Stop) key for more than 3 seconds.

## How to Exit SP Mode

Press the "Back" and "Exit" keys or (Clear Modes) key until the standby mode display appears.

## Accessing Copy Mode from within an SP Mode

1. Press the (Interrupt) key.
2. Select the appropriate copy mode and make trial copies.
3. To return to SP mode, press the $\approx$ (Interrupt) key again.

## How to Select the Program Number

Program numbers are composed or two or three levels.
To input the required program number, select each program level in sequence.

1. Select the 1 st level program number on the numeric keypad and press the $\#$ key or "OK" key.
NOTE: The 1st level program number can be selected using the "Prev." or "Next" key.
2. Select the 2nd level program number at the numeric keypad and press the \# key or "OK" key.
NOTE: The 2nd level program number can be selected using the "Prev." or "Next" key.
3. If there any are 3rd level programs in SP mode, they can be selected in the same way as the 1st and 2nd level SP modes.
NOTE: The 3rd level program number can be selected using the "Prev." or "Next" key.

## To input a value or setting for an SP mode

1. Enter the required program mode as explained above.
2. Enter the required setting using the numeric keys, then press the \# key or "OK" key.
NOTE: 1) If you forget to press the \# key or "OK" key, the previous value remains.
2) Change between " + " and "-" using the $\because$ key before entering the required value.
3. Exit SP mode.

### 4.2.2 SERVICE PROGRAM MODE TABLES

NOTE: 1) In the Function column, comments are in italics.
2) In the Setting column, the default value is in bold letters.
3) An asterisk "*" after the mode number means that this mode is stored in the NVRAM. If you do a RAM reset, all these SP modes will be return to their factory settings.
4) SP4-915 to 4-941: When the SP mode name has a prefix of "P-", the adjustment is only effective when the user selects an original type of "Service Mode" (User Tools - General Features - 08. Image Adjustment).

| Mode No. |  |  |  | Function |
| :---: | :---: | :--- | :--- | :--- |

| Mode No. |  |  | Function | Settings |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{array}{\|\|c\|\|} \hline \text { Class } \\ 1 \text { and } 2 \end{array}$ | $\begin{aligned} & \text { Class } \\ & \hline \end{aligned}$ |  |  |  |
| 1-002* | 1 | Side-to-Side Regist. (1st Paper Feed) | Adjusts the printing side-to-side registration from the 1st paper feed station using the Trimming Area Pattern (SP5-902, No.10). | $+9 \sim-9$$0.1 \mathrm{~mm} / \mathrm{step}$$\mathbf{+ 0 . 0 ~ m m}$ |
|  |  |  | Use the $\bigcirc$ key to toggle between + and - before entering the value. The specification is $2 \pm 1.5 \mathrm{~mm}$. See "Replacement and Adjustment Copy Adjustment" for details. |  |
|  | 2 | Side-to-Side Regist. (2nd Paper Feed) | Adjusts the printing side-to-side registration from the 2nd paper feed station using the Trimming Area Pattern (SP5-902, No.10). | $\begin{aligned} & +9 \sim-9 \\ & 0.1 \mathrm{~mm} / \mathrm{step} \\ & \mathbf{+ 0 . 0 \mathrm { mm }} \end{aligned}$ |
|  |  |  | Use the $\odot$ key to toggle between + and -before entering the value. The specification is $2 \pm 1.5 \mathrm{~mm}$. See "Replacement and Adjustment Copy Adjustment" for details. |  |
|  | 3 | Side-to-Side Regist. (3rd Paper Feed) | Adjusts the printing side-to-side registration from the 3rd paper feed station using the Trimming Area Pattern (SP5-902, No.10). | $\begin{aligned} & \hline+9 \sim-9 \\ & 0.1 \mathrm{~mm} / \mathrm{step} \\ & \mathbf{+ 0 . 0 \mathrm { mm }} \end{aligned}$ |
|  |  |  | Use the $\odot$ key to toggle between + and - before entering the value. The specification is $2 \pm 1.5 \mathrm{~mm}$. See "Replacement and Adjustment Copy Adjustment" for details. |  |
|  | 4 | Side-to-Side Regist. (By-pass Feed) | Adjusts the printing side-to-side registration from the by-pass paper feed station using the Trimming Area Pattern (SP5-902, No.10). | $\begin{aligned} & +9 \sim-9 \\ & 0.1 \mathrm{~mm} / \mathrm{step} \\ & +0.0 \mathrm{~mm} \end{aligned}$ |
|  |  |  | Use the $\because$ key to toggle between + and - before entering the value. The specification is $2 \pm 1.5 \mathrm{~mm}$. See "Replacement and Adjustment Copy Adjustment" for details. |  |
| 1-003* | 1 | Paper Feed Timing (1st Paper Feed) | Adjusts the paper feed clutch timing at registration. The paper feed clutch timing determines the amount of paper buckle at registration. (A larger setting leads to more buckling.) | $\begin{aligned} & 0 \sim 30 \\ & 1 \mathrm{~mm} / \mathrm{step} \\ & 7 \mathrm{~mm} \\ & \hline \end{aligned}$ |
|  | 2 | Paper Feed Timing (2nd Paper Feed) |  | $\begin{aligned} & \hline 0 \sim 30 \\ & 1 \mathrm{~mm} / \text { step } \\ & 8 \mathrm{~mm} \end{aligned}$ |
|  | 3 | Paper Feed Timing (3rd Paper Feed) |  | $\begin{aligned} & \hline 0 \sim 30 \\ & 1 \mathrm{~mm} / \text { step } \\ & 8 \mathrm{~mm} \end{aligned}$ |

|  |  |  | Press down the "Photo mode" key and the "OK" or $\#$ key at the same time to reset the counter. If the reset was successful, the beeper will sound 5 times. If it failed, the beeper will sound only twice. |  |
|  |  | Timer Counter Reset | Resets the timer counter (SP7-991). | $\begin{aligned} & \text { 0: No } \\ & \text { 1: Yes } \end{aligned}$ |
| 7-907 |  |  | Press down the "Photo mode" key and the "OK" or $\#$ key at the same time to reset the counter. If the reset was successful, the beeper will sound 5 times. If it failed, the beeper will sound only twice. |  |
| 7-908* |  | Maintenance Count. Display | Displays the value of the maintenance counter (number of copies since the last PM). |  |
|  |  | Maintenance Count. | Resets the maintenance counter. |  |
| 7-909 |  | Reset | Press down the "Photo mode" key and the "OK" or $\#$ key at the same time to reset the counter. If the reset was successful, the beeper will sound 5 times. If it failed, the beeper will sound only twice. | 1: Yes |
| 7-991* |  | Timer Counter Display | Displays the total time that the main switch has been turned on. |  |

### 4.2.3 TEST PATTERN PRINTING (SP5-902)

1. Input the level 3 number for the test pattern you need.
2. Press the $\approx$ (Interrupt) key on the display to access the copy mode display.
3. Select the required copy features such as paper size, image density, and reproduction ratio.
4. Press the ( $)$ key to print the test pattern.
5. After checking the test pattern, exit copy mode by pressing the $\approx$ (Interrupt) key again.
6. Exit SP mode.

Test Pattern Table (SP5-902: Test Pattern Printing)

| No. | Test Pattern |
| :---: | :--- |
| 0 | No Print |
| 1 | Vertical Lines (single dot) |
| 2 | Horizontal Lines (single dot) |

### 4.2.4 INPUT CHECK (SP5-803)

A250M501.WMF

1. Access SP mode 5-803.
2. Select the number that will access the switch or sensor you wish to check (see the table below.
3. Check the status of the sensor or switch.
4. If you wish to check the signal during a copy cycle, select the required copy modes, then press the Start key. After that, re-enter the SP mode to monitor the signal.
5. The LCD panel will display " 00 H " or " 01 H ". The meaning of the display is as follows.

Input Check Table

| Number | Description | Reading |  |  |  |
| :---: | :--- | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{0 0 H}$ | $\mathbf{0 1 H}$ |  |  |
| $0 \sim 1$ | Not used | Closed | Opened |  |  |
| 2 | Right door switch - LD5 V | Closed | Opened |  |  |
| 3 | Right door switch - +24 V | Closed | Opened |  |  |
| 4 | Vertical transport cover switch | Closed | Opened |  |  |
| 5 | Tray cover switch <br> (Optional paper tray unit) | Closed | Opened |  |  |
| 6 | Not used |  |  |  |  |
| 7 | Bin tray open switch <br> (Optional 1-bin sorter) | Paper not detected | Paper detected |  |  |
| $8 \sim 16$ | Not used | Paper not detected | Paper detected |  |  |
| 17 | Vertical transport sensor | Paper not detected | Paper detected |  |  |
| 18 | Vertical transport sensor <br> (Optional paper tray unit) | Paper not detected | Paper detected |  |  |
| 19 | Registration sensor | Paper not detected | Paper detected |  |  |
| 20 | Fusing exit sensor | Paper not detected <br> (Optional 1-bin sorter) | Paper detected |  |  |
| 21 | Exit sensor |  |  |  |  |
| $22 \sim 25$ | Not used | See Table 3 |  |  |  |
| 26 | By-pass tray paper sensor | Paper |  |  |  |
| 27 | By-pass paper size sensor |  |  |  |  |

| Number | Description | Reading |  |
| :---: | :---: | :---: | :---: |
|  |  | 00H | 01H |
| 28 ~ 30 | Not used |  |  |
| 31 | Paper end sensor | Paper not detected | Paper detected |
| 32 | Not used |  |  |
| 33 | Paper size switch | See Table 1 |  |
| 34 | Not used |  |  |
| 35 | Paper near-end sensor | See Table 4 |  |
| $36 \sim 40$ | Not used |  |  |

|  | 20 H | Paper tray unit (1 tray) |
|  | 30 H | Paper tray unit (2 trays) |

### 4.2.5 OUTPUT CHECK (SP5-804)

CAUTION: To prevent mechanical or electrical damage, do not keep an electrical component on for a long time.

1. Access SP mode 5-804.
2. Select the SP number that corresponds to the component you wish to check (see the table below), then press "OK" or the ${ }^{\#}$ key.
3. Press " 1 ", then press "OK" or the $\oplus$ key to check that component.
4. To interrupt the test, exit the SP mode.
5. If you wish to check another component, re-enter the SP mode.

## Output Check Table

NOTE: Pull out the tray before performing the output checks from 29 to 32.

| Number | Description |
| :---: | :--- |
| 0 | Not used |
| 1 | Main motor |
| 2 | Not used |
| 3 | Registration clutch |
| $4 \sim 6$ | Not used |
| 7 | Exhaust fan (High Speed) |
| 8 | Exhaust fan (Low Speed) |
| $9 \sim 11$ | Not used |
| 12 | By-pass feed clutch |
| 13 | Paper feed clutch |
| $14 \sim 20$ | Not used |
| 21 | Vertical transport clutch |
| 22 | Relay clutch (Optional paper tray unit) |
| $23 \sim 25$ | Not used |
| 26 | Upper paper feed clutch (Optional paper tray unit) |
| 27 | Lower paper feed clutch (Optional paper tray unit) |
| 28 | Tray motor (Optional paper tray unit) |
| 29 | Upper lift motor (Up) (Optional paper tray unit) |

| Number | Description |
| :---: | :--- |
| 30 | Lower lift motor (Up) (Optional paper tray unit) |
| 31 | Upper lift motor (Down) (Optional paper tray unit) |
| 32 | Lower lift motor (Down) (Optional paper tray unit) |
| $33 \sim 48$ | Not used |
| 49 | Exit tray LED |
| 50 | 1-bin tray LED |
| 51 | Polygonal mirror motor |
| 52 | Polygonal mirror motor and laser diode |
| 53 | Laser diode |
| 54 | Junction gate solenoid (Optional 1-bin Sorter) |
| $55 \sim 77$ | Not used |
| 78 | Key counter count up (Optional Key Counter) |
| $79 \sim 89$ | Not used |
| 90 | DF transport motor (Optional ADF) |
| 91 | DF feed clutch (Optional ADF) |
| 92 | DF pick-up solenoid (Optional ADF) |
| 93 | Stamp solenoid (Optional ADF) |
| $94 \sim 99$ | Not used |

### 4.2.6 COPY JAM HISTORY DISPLAY (SP7-903)

After entering the SP mode, select " 1 " and press the "OK" or $\#$ key. The LCD panel will display the following message.

1. Jam history number
2. Main motor operating time: Date
3. Hour
4. Minute
5. Second
6. Jam code (see the table below)
7. Jam location
8. Paper feed station
9. Paper size

| Jam Code | Meaning |
| :---: | :--- |
| 010 | Registration sensor not activated (from paper tray). |
| 030 | Vertical transport sensor not activated. |
| 031 | Vertical transport sensor (optional paper tray unit) not activated. |
| 050 | Registration sensor not activated (from by-pass tray). |
| 070 | Registration sensor remained activated by paper. |
| 122 | Fusing exit sensor not activated. |
| 123 | Fusing exit sensor remained activated by paper. |
| 149 | Exit sensor (optional 1-bin sorter) not activated. |
| 150 | Exit sensor (optional 1-bin sorter) remained activated by paper. |

NOTE: The NVRAM can store data for up to 10 copy jams. If more than 10 copy jams occur, the oldest data is erased.

### 4.2.7 ORIGINAL JAM HISTORY DISPLAY (SP7-905)

After entering the SP mode, select " 1 " and press the "OK" or \# key. The following message is displayed.

1. Jam history number
2. Main motor operating time: Date
3. Hour
4. Minute
5. Second
6. Jam code (see the table below)
7. Original size

| Jam Code | Meaning |
| :---: | :--- |
| 210 | Registration sensor not activated. |
| 211 | Registration sensor remained activated by paper. |
| 216 | Registration sensor activated interval between originals is too small. |

NOTE: The NVRAM can store data for up to 10 copy jams. If more than 10 copy jams occur, the oldest data will be erased.

### 4.2.8 SYSTEM PARAMETER AND DATA LISTS (SP5-992)

1. Access SP mode 5-902 and select the number corresponding to the list that you wish to print.
2. Press the (Interrupt) key on the operation panel to access the copy mode display.
3. Select the paper size.
4. Press the $(\underset{)}{(S t a r t)}$ key on the operation panel to print the list.
5. After printing the list, exit copy mode by pressing the $\approx$ (Interrupt) key on the operation panel.
6. Exit SP mode.

### 4.2.9 MEMORY ALL CLEAR (SP5-801)

NOTE: Memory All Clear mode resets all the settings and counters stored in the NVRAM to the defaults, except for the following:

- Electrical total counter value (SP7-003)
- Machine serial number (SP5-811)
- Plug \& Play brand name and production name setting (SP5-907)
- Some SBU settings (SP4-904-3, SP4-904-4, SP4-906, SP4-909)

Normally, this SP mode should not be used. This procedure is necessary only after replacing the NVRAM, or when the copier malfunctions because the NVRAM is damaged.

## Using a Flash Memory Card

1. Upload the NVRAM data to a flash memory card (see NVRAM Data Upload).
2. Print out all SMC data lists (SP mode 5-992).

NOTE: Be sure to print out all the lists. If the NVRAM data upload was not completed, it is necessary to change the SP mode settings by hand.
3. Access SP mode 5-801.
4. Hold the "Photo Mode" key and the "OK" or \#) key at the same time. (If the operation was successful, the beeper will sound 5 times. If it failed, the beeper will sound only twice.)
5. Turn the main switch off and back on.
6. Download the NVRAM data from a flash memory card (see NVRAM Data Download).

## Without Using a Flash Memory Card

If there is no flash memory card, follow the steps below.

1. Print out all SMC Data Lists (SP mode 5-992).
2. Access SP mode 5-801.
3. Hold the "Photo Mode" key and the "OK" or \#) key at the same time. (If the operation was successful, the beeper will sound 5 times. If it failed, the beeper will sound only twice.)
4. Turn the main switch off and back on.
5. Do the printer and scanner registration and magnification adjustments (see Replacement and Adjustment - Copy Adjustments).
6. Referring to the SMC data lists, re-enter any values that differ from the factory settings. In particular, the values for SP4-904-1, SP4-904-2, SP4-905, and SP4-907 must be re-entered.
7. Do the standard white level adjustment (SP4-908). (See Replacement and Adjustment - Standard White Density Adjustment for details.)
8. Check the copy quality and the paper path, and do any necessary adjustments.

### 4.2.10 PROGRAM UPLOAD/DOWNLOAD

In this machine, the BICU software is upgraded using a flash memory card.
There are two program download procedures.

- SP5-826: Uploads from the BICU to a flash memory card.
- SP5-827: Downloads from a flash memory card to the BICU.

## Program Download (SP5-827)

A250M211.WMF

1. Turn off the main switch.
2. Remove the cover [ A ] (1 rivet).
3. Plug the flash memory card $[B]$ into the card slot.

NOTE: Make sure that the surface printed " $A$ " faces the left side of the machine (as viewed from the front of the machine).
4. Hold the (Energy Saver) key and turn on the main switch.
5. Access SP mode 5-827.
6. The machine erases the current software, then writes the new software to the BICU. This takes about 60 seconds. If downloading failed, an error message appears, as follows. At this time, repeat the download procedure.

Display during writing

| [Serviceman P-Mode] |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Program Download |  |  |  |  |
| Status: $1-02254$ | 2.08 | NA | $04 / 1$ | $11: 02$ |

A250M505.WMF

Display when the download is complete

| [Serviceman P-Mode] |  |
| :--- | :--- |
| Program Download |  |
| Loading completed | $04 / 1 \quad 11: 02$ |

A250M506.WMF

Display if writing failed

| [Serviceman P-Mode] |  |  |
| :--- | :--- | :--- |
| Program Download |  |  |
| Loading error!!! | $04 / 1$ | $11: 02$ |

A250M507.WMF

## Program Upload (SP5-826)

A250M211.WMF

1. Turn off the main switch.
2. Remove the cover $[A]$ (1 rivet).
3. Plug the flash memory card $[B]$ into the card slot.

NOTE: Make sure that the surface printed " $A$ " faces the left side of the machine (as viewed from the front of the machine).
4. Turn on the main switch.
5. Access SP mode 5-826.
6. The machine erases the current software, then writes the new software to the flash memory card. This takes about 60 seconds. If uploading failed, an error message appears (see "Program Download"). At this time, repeat the upload procedure.

### 4.2.11 NVRAM DATA DOWNLOAD

After doing the memory all clear procedure, NVRAM data will be reset to their default settings. So it is necessary to upload the NVRAM data before clearing the NVRAM, and to download the NVRAM data afterwards.

- SP5-824: Uploads from the BICU to a flash memory card.
- SP5-825: Downloads from a flash memory card to the BICU.

## NVRAM Data Download (SP5-825)

NOTE: This procedure downloads all the settings stored in the NVRAM except for the following items:

- Electrical total counter value (SP7-003)
- Machine serial number (SP5-811, SP5-920, SP5-925)
- Plug \& Play brand name and production name setting (SP5-907)
- Some SBU settings (SP4-904-3, SP4-904-4, SP4-906, SP4-909)

1. Turn off the main switch.
2. Remove the cover [A] (1 rivet).
3. Plug the flash memory card $[B]$ into the card slot.

NOTE: Make sure that the surface printed " $A$ " faces the left side of the machine (as viewed from the front of the machine).
4. Turn on the main switch.
5. Access the SP mode 5-825.
6. The machine erases the current settings, then writes the new settings onto the NVRAM on the BICU board. If downloading failed, an error message appears (see "Program Download"). At this time, repeat the download procedure.

## NVRAM Data Upload (SP5-824)

1. Turn off the main switch.
2. Remove the cover [A] (1 rivet).
3. Plug the flash memory card $[B]$ into the card slot.
NOTE: Make sure that the surface printed "A" faces the left side of the machine (as viewed from the front of the machine).
4. Turn on the main switch.
5. Access SP mode 5-824.

[B]
6. The machine erases the current

A250M211.WMF settings, then writes the machine's settings to the flash memory card.
This takes about 60 seconds. If uploading failed, an error message appears (see "Program Download"). At this time, repeat the upload procedure.

### 4.2.12 APS AND PLATEN/DF COVER SENSOR OUTPUT DISPLAY (SP4-301)

1. Platen cover sensor status 1 = Closed
2. APS sensor status

1 = Paper detected
3. Paper size display

### 4.2.13 DF APS SENSOR OUTPUT DISPLAY (SP6-901)

A250M600.WMF

|  | Large |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| W1 | 0 | 0 | 1 | Small |
| W2 | 0 | 1 | 0 | 1 |

W2 L2

1. Original set sensor status
2. APS sensor status
3. Paper size display

| L1 | L2 | W1 | W2 | Paper Size |  |

### 4.2.15 SERIAL NUMBER INPUT (SP5-811)

Used to input the machines serial number. (Normally done at the factory.) The numeric key pad has 12 buttons. Use the first 11 buttons (1) to (9), ©) and (0) to input the serial number ( $\#$ is not used). Each button stands for one digit of the serial number. The first 4 buttons allow you to scroll through number 0 to 9 and " $A$ " to " $Z$ ". Buttons 5 to 11 only scroll through numbers 0 to 9 .

1st digit 2nd digit 3rd digit
(4)
(5)
(6)

4th digit 5 th digit 6 th digit
(7)
(8)
(9)

7th digit 8th digit 9th digit
$\because$
(0)
\#

10th digit 11th digit (Not use)

### 4.3 USER TOOLS

The User Tools are accessed by users and key operators, and by sales and service staff. User Tools are used to input or change the copier's default settings.

### 4.3.1 HOW TO ENTER AND EXIT USER TOOLS

Press the User Tools button, then select the User Tools program. After finishing the User Tools program, press the User Tools button to exit User Tools.

### 4.3.2 USER TOOLS TABLE

## System Setting Table

### 5.2 HOW TO CLEAR THE MAINTENANCE COUNTER

After PM, perform the maintenance counter clear (SP7-909).

1. Access SP mode 7-909.
2. Press down the "Photo mode" key and the "OK" or \# key at the same time to reset the counter. If the reset was successful, the beeper will sound 5 times. If it failed, the beeper will sound only twice.

## 6. REPLACEMENT AND ADJUSTMENT 6.1 EXTERIOR REMOVAL

A250R112.WMF

### 6.1.1 REAR COVER

1. Remove the rear cover $[\mathrm{A}]$ (5 screws)

### 6.1.2 COPY TRAY

1. Remove the copy tray [B], as shown (2 screws).

NOTE: If a 1-bin sorter is installed, remove it before removing the copy tray.

### 6.1.3 LEFT COVER

1. Remove the left cover [C], as shown (1 screw).

### 6.1.4 FRONT COVER

A250R105.WMF

A250R907.WMF

1. Remove the copy tray. (Refer to Copy Tray Removal, section 6.1.2.)
2. Remove the small front cover [A] (1 screw).
3. Remove the front cover [B], as shown.

A250R908.WMF

### 6.1.5 UPPER RIGHT COVER

1. Remove the upper right cover [A] (1 screw).

### 6.1.6 LOWER RIGHT COVER

1. Remove the upper right cover.
2. Remove the lower right cover $[B]$ (1 screw).

### 6.1.7 RIGHT SMALL COVER

1. Remove the right small cover [C] (1 screw).

### 6.1.8 OPERATION PANEL

A250R123.WMF

1. Remove the operation panel $[A]$ ( 5 screws and 1 connector).

### 6.2 SCANNER

### 6.2.1 EXPOSURE GLASS REMOVAL

## Platen Cover Model

A250R009.WMF

1. Remove the left scale [A] (2 screws).
2. Remove the rear scale $[B]$ ( 3 screws).
3. Remove the exposure glass [C].

NOTE: When re-installing the exposure glass, place it so that the mark [D] is in the right front position.

## ADF Model

A250R010.WMF

1. Remove the upper right cover. (See Upper Right Cover Removal, section 6.1.5.)
2. Remove the two screws $[A]$.
3. Remove the rear scale [B] (3 screws).
4. Remove the exposure glass [C] with left scale.

NOTE: When re-installing the exposure glass, make sure that the left scale is inserted into the two pegs [D] on the edge holder.

### 6.2.2 LENS BLOCK REMOVAL

A250R005.WMF

1. Remove the exposure glass.
2. Remove the lens cover [A] ( 6 screws).
3. Remove the screw $[\mathrm{B}]$ securing the grounding wire, and disconnect the flat cable [C].
4. Remove the lens block [D] (4 screws).

### 6.2.3 EXPOSURE LAMP REPLACEMENT

A250R001.WMF

1. Remove the exposure glass.
2. Remove the platen cover (2 screws) and remove the upper rear cover (2 screws).
3. Remove the operation panel ( 5 screws and 1 connector).
4. Move the 1st scanner to the opening in the center of the frame.
5. Remove the screw $[\mathrm{A}]$ securing the flat cable $[\mathrm{B}]$ and disconnect the connector [C].
6. Press the hook [D] down to release it. Then slide the exposure lamp $[E]$ in the direction of the arrow to remove it.
NOTE: When installing the exposure lamp, route the cable under the mylar [F] as shown.

### 6.2.4 1ST SCANNER ALIGNMENT ADJUSTMENT

A250R008.WMF

A250R007.WMF

1. Remove the exposure glass.
2. Remove the platen cover (2 screws) and remove the upper rear cover (2 screws).
3. Remove the operation panel ( 5 screws and 1 connector).
4. Move the 1 st scanner to the opening in the center of the frame.
5. Remove the screw securing the flat cable of the exposure lamp, and disconnect the exposure lamp connector.
6. Remove the 1 st scanner ( 2 screws).
7. Position the 1 st scanner bracket $[A]$ so that the positioning tool $[B]$ can fit smoothly into the holes as shown. Mark the position of the 1st scanner bracket and remove the tool.
8. While keeping the 1 st scanner bracket in the same position, set the 1 st scanner on the 1st scanner bracket and adjust the 1st scanner alignment so that the positioning tool fits smoothly into the front hole.
9. Secure the two screws [C] to fix the 1st scanner position.

### 6.2.5 2ND SCANNER POSITION ADJUSTMENT

1. Remove the exposure glass.
2. Remove the platen cover ( 2 screws) and remove the upper rear cover (2 screws).
3. Remove the operation panel ( 5 screws and 1 connector).
4. Move the 1st scanner to the opening in the center of the frame.
5. Remove the screw securing the flat cable of the exposure lamp, and disconnect the exposure lamp connector.
6. Remove the 1 st scanner (2 screws).
7. Loosen the screw $[A]$ securing the belt to the bracket $[B]$.
8. Position the 2nd scanner [C] and the 1st scanner bracket [D] so that the tools [E] can be smoothly set as shown.
9. Tighten the screw $[A]$.

### 6.3 LASER UNIT

| $\triangle$ WARNING |
| :--- |
| Turn off the main power switch and unplug the machine before attempting |
| any of the procedures in this section. Laser beams can seriously damage |
| your eyes. |

### 6.3.1 CAUTION DECAL LOCATIONS

Caution decals are located in the laser section as shown below.

### 6.3.2 LASER UNIT/TONER SHIELD GLASS REMOVAL

1. Remove the AIO.
2. Remove the paper exit tray (2 screws).
3. Remove the laser unit [A] (4 screws and 3 connectors).
4. After removing the laser unit, remove the toner shield glass $[B]$.

NOTE: When reinstalling the laser unit, be careful not to damage the actuator of the shutter.

### 6.3.3 LD UNIT/LASER SYNCHRONIZATION DETECTOR REMOVAL

A250R502.WMF

1. Remove the paper exit tray (2 screws).
2. Remove the laser unit.
3. Remove the LD unit [A] (4 screws and 1 connector).
4. Remove the laser synchronization detector $[B]$ ( 2 screws and 1 connector).

### 6.3.4 EXIT TRAY PAPER SENSOR REMOVAL

1. Remove the paper exit tray (2 screws).
2. Remove the exit tray paper sensor [C] (1 screw and 1 connector).

### 6.3.5 POLYGONAL MIRROR MOTOR REMOVAL

A250R503.WMF

1. Remove the paper exit tray (2 screws).
2. Remove the laser unit cover [A] (5 screws).
3. Remove the polygonal mirror motor $[\mathrm{B}]$ (4 screws and 1 connector).

### 6.3.6 LASER UNIT ALIGNMENT ADJUSTMENT

A250R889.WMF

Moving the lever to the front changes the trim pattern as shown above

Moving the lever to the rear changes the trim pattern as shown above

A250R890.WMF

1. Output the trim pattern using SP5-902 (pattern 10).
2. Remove the paper exit tray.
3. Loosen the 4 screws securing the laser unit.
4. Remove the screw $[A]$ securing the adjustment lever $[B]$ from the factory installation position [C]. Then reinstall the screw at the adjustment position [D].
5. Adjust the position of the lever $[B]$ so that a square trim pattern is output with SP5-902.
6. Tighten the screw $[\mathrm{A}]$.
7. Tighten other 3 screws.

### 6.4 IMAGE TRANSFER

### 6.4.1 TRANSFER ROLLER REMOVAL

## Preparation

1) Turn off the main switch.
2) Open the right side cover.

1. Open the transfer roller cover $[A]$.
2. Remove the transfer roller $[B]$.

NOTE: Do not touch the transfer roller surface with bare hands.

### 6.5 FUSING

### 6.5.1 FUSING UNIT REMOVAL

## Preparation

1) Turn off the main switch.
2) Open the right side cover.

| $\triangle$ CAUTION |
| :--- |
| Be careful when removing the fusing unit, because it could be very hot. |

1. Remove the two screws $[A]$.
2. Release the levers as shown $[B]$.
3. Remove the fusing unit [C].

### 6.5.2 HOT ROLLER, FUSING LAMP AND THERMOFUSE REPLACEMENT

## Preparation

1) Remove the fusing unit. (Refer to Fusing Unit Replacement, section 6.5.1.)

1. Remove the fusing cover $[A]$ (2 screws).
2. Remove the fusing exit sensor $[B]$.
3. Remove the two brackets [C] (2 screws).
4. Separate the fusing unit (2 screws).

5. Disconnect the hot roller stripper pawl springs (see Hot Roller Stripper Pawl Removal, section 6.5.5.)
6. Remove the hot roller grounding terminal [D] (1 screw).
7. Remove the two screws securing the fusing lamp terminals [E].
8. Replace the hot roller [F].
9. Replace the fusing lamp [G].
10. Replace the thermofuse $[\mathrm{H}]$ (2 screws).

NOTE: 1) Do not touch the hot roller with your bare hands.
2) Do not touch the fusing lamp with your bare hands.

### 6.5.3 PRESSURE ROLLER REPLACEMENT

## Preparation

1) Remove the fusing unit and separate the fusing unit. (Refer to Hot Roller, Fusing Lamp and Thermofuse Replacement, section 6.5.2.)

A250R505.WMF

1. Remove the paper entrance guide [A].
2. Remove the paper exit guide $[B]$.
3. Remove the two pressure springs [C].
4. Remove the pressure arms [D]
5. Remove the two bushings [E].
6. Replace the pressure roller [F].

NOTE: 1) When reinstalling the pressure roller, make sure that the green pin [G] is on the left side, as shown (near the fusing exit sensor).
2) Do not touch the pressure roller with your bare hands.

### 6.5.4 FUSING THERMISTOR REPLACEMENT

## Preparation

1) Remove the hot roller. (Refer to Hot Roller and Fusing Lamp and Thermofuse Replacement, section 6.5.2.)

A250R504.WMF

1. Remove the thermofuse $[\mathrm{A}]$.
2. Remove the cable cover (1 screw) $[B]$.

NOTE: When reinstalling the cable cover, secure the cable under the cover correctly.
3. Replace the drawer connector (1 screw) [C] and fusing thermistor (1 screw) [D].

### 6.5.5 HOT ROLLER STRIPPER PAWL REPLACEMENT

## Preparation

1) Remove the fusing unit and separate the fusing unit. (Refer to Hot Roller, Fusing Lamp and Thermofuse Replacement, section 6.5.2.)

1. Disconnect the hot roller stripper pawl springs $[A]$ (5 springs).
2. Remove the two outer exit rollers $[B]$.
3. Remove the hot roller stripper pawl stoppers (5 stoppers) [C].
4. Replace the five hot roller stripper pawls [D].

### 6.6 PAPER FEED

### 6.6.1 PAPER FEED ROLLER REPLACEMENT

## Preparation

1) Remove the fusing unit. (Refer to Fusing Unit Replacement, section 6.5.1.)
2) Remove the AIO.

A250R706.WMF

1. Draw out the first paper cassette.
2. Remove the center paper feed roller guide $[A]$.
3. While releasing the spring mechanism [B], remove the paper feed roller [C].

NOTE: Do not touch the paper feed roller with your bare hands.

### 6.6.2 FRICTION PAD REPLACEMENT

A250R701.WMF

1. Draw out the paper cassette.
2. While unhooking the hooks $[A]$, remove the friction pad $[B]$, as shown. NOTE: Be sure to unhook the hooks or they may break.

### 6.6.3 STANDARD TRAY PAPER FEED CLUTCH REPLACEMENT

## Preparation

1) Remove the rear cover. (Refer to Rear Cover Removal, section 6.1.1.)
2) Remove the main motor and gear box. (Refer to Main Motor/Gear Box Replacement, section 6.7.1.)
3) Remove the AIO.

A250R707.WMF

1. Remove the paper feed roller. (Refer to Paper Feed Roller Replacement, section 6.6.1.)
2. While unhooking the hook $[A]$, pull the shaft $[B]$ out to the left.
3. Replace the tray paper feed clutch [C] (1 connector on the engine control board).
NOTE: Do not remove the bushing for the paper feed roller shaft at the rear, because it may not be possible to reinstall it.

### 6.6.4 VERTICAL TRANSPORT ROLLER/SENSOR/CLUTCH REPLACEMENT

A250R708.WMF

A250R709.WMF

1. Remove the rear right cover.
2. Replace the vertical transport clutch [A] (1 snap ring).
3. Open the vertical transport cover and remove the pin [B].
4. Remove the vertical transport guide [C] (2 screws).
5. Remove the vertical transport roller [D] (3 E-rings, 2 bushings)
6. Remove the vertical transport sensor with bracket ( 1 screw ).
7. Replace the vertical transport sensor [E].

### 6.6.5 BY-PASS FEED ROLLER REPLACEMENT

A250R705.WMF

1. Remove the rear right cover.
2. Remove the AIO cartridge and the fusing unit.
3. Release the by-pass feed sensor feeler [A] by pushing the left side of the feeler shaft, as shown.
4. While releasing the hook $[B]$ at each side, remove the by-pass feed roller cover [C], as shown.
NOTE: Remove the by-pass feed roller cover carefully (it is attached tightly). Otherwise, the feeler [ A ] may be damaged.
5. Remove the by-pass feed clutch [D] (1 snap ring).
6. Remove the by-pass feed roller [E], as shown.

NOTE: Do not touch the by-pass feed roller with your bare hands.

### 6.6.6 BY-PASS FEED FRICTION PAD REPLACEMENT

## Preparation

1) Remove the by-pass feed roller. (Refer to By-pass Feed Roller Removal, section 6.6.5.)

1. While unhooking the hooks $[A]$, remove the friction pad $[B]$, as shown. NOTE: Be sure to unhook the hooks or they may break.

### 6.6.7 BY-PASS FEED SENSOR REPLACEMENT

1. Remove the rear right cover.
2. Replace the by-pass feed sensor [A], as shown.

### 6.6.8 BY-PASS TRAY REMOVAL

A250R715.WMF

A250R716.WMF

1. Open the vertical transport cover and remove the pin $[A]$.
2. Remove the front right cover $[B]$ ( 1 screw).
3. Disconnect the by-pass tray sensor connector [C].
4. While lifting the hook [D] upward, lower the by-pass tray and remove it as shown.

NOTE: Be sure to unhook the hooks or they may break.

### 6.6.9 BY-PASS FEED PAPER WIDTH SENSOR REMOVAL

## Preparation

1) Remove the by-pass tray (Refer to By-pass Tray Removal, section 6.6.8.).

A250R718.WMF
1. Remove the tray lever $[A]$ (1 snap ring and 1 pin).
2. Remove the upper by-pass tray [B] (1 mylar and 2 hooks).
3. Replace the by-pass feed paper width sensor [C].

NOTE: 1) Be sure to unhook the hooks or they may break.
2) When reinstalling the by-pass feed paper width sensor, move the paper guides to the center position.
Adjust the position of the hole in the sensor gear as shown when installing the paper width sensor.

### 6.6.10 REGISTRATION ROLLER REMOVAL

## Preparation

1) Remove the by-pass paper feed roller cover. (Refer to By-pass Paper Feed Roller Removal, section 6.6.5.)
2) Remove the rear cover. (Refer to Exterior Removal, section 6.1.)
3) Remove the main motor and gearbox. (Refer to Main Motor and Gearbox Removal, section 6.7.)

1. Remove the registration roller clutch $[A]$ (1 snap ring).
2. Remove the bushing, as shown $[B]$.
3. Replace the registration roller [C].

### 6.6.11 REGISTRATION SENSOR REPLACEMENT

## Preparation

1) Remove the gearbox. (Refer to Main Motor and Gearbox Removal, section 6.7.)

A250R713.WMF

1. Remove the registration sensor connector.
2. Replace the registration sensor $[A]$, as shown.

### 6.6.12 TONER END SENSOR REPLACEMENT

## Preparation

1) Remove the AIO cartridge.

A250R702.WMF

1. Replace the toner end sensor $[A]$, as shown (1 connector).

### 6.7 OTHERS

### 6.7.1 MAIN MOTOR/GEAR BOX REPLACEMENT

## Preparation

1) Remove the rear cover.
2) Remove the by-pass feed roller (refer to By-pass Feed Roller Replacement, section 6-6-5).

1. Remove the flywheel $[A]$ (3 screws).
2. Remove the registration roller clutch [B].
3. Remove the main motor [C] (1 connector and 4 screws).
4. Remove the grounding plate [D] (1 screw).
5. Remove the gear box [E] (6 screws).

### 6.7.2 IOB (INPUT OUTPUT BOARD) REPLACEMENT

## Preparation

1) Remove the rear cover.

A250R906.WMF

1. Replace the input output board $[A]$ (4 screws and all connectors).

### 6.7.3 BICU (BASE-ENGINE IMAGE CONTROL UNIT) REPLACEMENT

## Preparation

1) Remove the left cover.

A250R905.WMF

1. Remove the base-engine image control unit $[A]$ ( 6 screws and all connectors).
2. Re-install the NVRAM from the old board in the socket on the new board.

### 6.7.4 POWER SUPPLY UNIT AND B/C/T POWER PACK REPLACEMENT

## Preparation

1) Remove the left cover.

A250R904.WMF

A250R903.WMF

1. Remove the exit tray $[A]$ (2 screws).
2. Remove the front cover [B].
3. Remove all connectors.
4. Remove the two bracket holders [C] (5 screws).
5. Remove the power supply unit and $B / C / T$ power pack [ $D$ ] (3 screws).

NOTE: Both boards are in this assembly. Take out whichever board needs replacing.

### 6.8 STANDARD WHITE DENSITY ADJUSTMENT

This is to adjust the standard white density level.
Perform this adjustment in any of the following conditions:

- After replacing the standard white plate.
- After replacing the NVRAM on the BICU. (If only the BICU is replaced, this adjustment is not necessary, as long as the NVRAM from the old BICU is put on the new BICU.)
- After performing a memory all clear (SP5-801).

## Procedure:

1. Place 10 sheets of new A4 sideways or A3 paper on the exposure glass and close the platen cover or the ADF.
2. Enter SP4-908 and select "1: YES". The standard white density is automatically adjusted.

### 6.9 COPY ADJUSTMENT PRINTING/SCANNING

NOTE: 1) You need to perform these adjustment(s) after replacing any of the following parts:

- Scanner
- Lens Block/SBU Assembly
- Scanner Drive Motor
- Polygon Mirror Motor
- Paper Trays
- Paper Side Fence
- Memory All Clear

2) For more details about accessing SP modes, refer to section 4.

### 6.9.1 PRINTING

NOTE: 1) Make sure the paper is installed correctly in each paper tray before you start these adjustments.
2) Use the trimming area pattern (SP5-902, No.10) to print the test pattern for the following procedures.
3) Set SP 5-902 to 0 again after completing these printing adjustments.

## Registration - Leading Edge/Side-to-Side

1. Check the leading edge registration, and adjust it using SP1-001. The specification is $2 \pm 1.5 \mathrm{~mm}$
2. Check the side-to-side registration for each paper feed station, and adjust them using the following SP modes.

|  | SP mode | Specification |
| :--- | :---: | :---: |
| 1st paper feed | SP1-002-1 | $2 \pm 1.5 \mathrm{~mm}$ |
| 2nd paper feed <br> (Optional PFU tray 1) | SP1-002-2 | $2 \pm 1.5 \mathrm{~mm}$ |
| 3rd paper feed <br> (Optional PFU tray 2) | SP1-002-3 | $2 \pm 1.5 \mathrm{~mm}$ |
| By-pass feed | SP1-002-4 | $2 \pm 1.5 \mathrm{~mm}$ |

A: Leading edge registration
B: Side-to-side registration

A250R512.WMF

## Blank Margin

NOTE: If the leading edge/side-to-side registration cannot be adjusted within the specifications, adjust the blank margin for the leading/left side edge.

1. Check the trailing edge and blank margin for the right side edge. Adjust them using the following SP modes.

|  | SP mode | Specification |
| :--- | :---: | :---: |
| Trailing edge | SP2-101-2 | More than 0.5 mm |
| Right side edge | SP2-101-4 | More than 0.5 mm |
| Leading edge | SP2-101-1 | $2 \pm 1.5 \mathrm{~mm}$ |
| Left side edge | SP2-101-3 | $2 \pm 1.5 \mathrm{~mm}$ |

A: Blank margin for the trailing edge
B: Blank margin for the right side edge
C: Blank margin for the leading edge
D: Blank margin for the left side edge

A250R513.WMF

## Main Scan Magnification

A250R524.WMF

1. Print the Grid Pattern (SP5-902, No.5).
2. Check the magnification (the grid size should be 2.7 mm ), and adjust the magnification using SP2-998 if necessary. The specification is $\pm 0.5 \%$.

### 6.9.2 SCANNING

NOTE: 1) Before doing the following scanner adjustments, check and adjust the printing registration/side-to-side adjustment and the blank margin adjustment,
2) Use an OS-A3 test chart to perform the following adjustments.

## Registration: Platen Mode

1. Place the test chart on the exposure glass and make a copy from one of the feed stations.
2. Check the leading edge and side-to-side registration, and adjust them using the following SP modes if necessary.

|  | SP mode |
| :--- | :---: |
| Leading edge | SP4-010 |
| Side-to-side edge | SP4-011 |

A: Leading edge registration
B: Side-to-side registration

A250R515.WMF

## Magnification

NOTE: Use an OS-A3 test chart to perform the following adjustment.

A: Main scan magnification
B: Sub-scan magnification

A250R517.WMF

## Main Scan Magnification

1. Place the test chart on the exposure glass and make a copy from one of the feed stations.
2. Check the magnification ratio, and adjust it using the following SP mode if necessary. The specification is $\pm 0.5 \%$.

|  | SP mode |
| :---: | :---: |
| Main Scan Magnification | SP4-008 |

## Sub-scan Magnification

1. Place the test chart on the exposure glass and make a copy from one of the feed stations.
2. Check the magnification ratio, and adjust it using the following SP mode if necessary. The specification is $\pm 0.5 \%$.

|  | SP mode |
| :--- | :---: |
| Sub-scan magnification | SP4-101 |

### 6.9.3 ADF IMAGE ADJUSTMENT

## Registration and Blank Margin

A250R516.WMF

A250R515.WMF

NOTE: Make a temporary test chart as shown above using A3/11" x 17" paper.

1. Place the temporary test chart on the ADF and make a copy from one of the feed stations.
2. Check the registration, and adjust it using the following SP modes if necessary.

|  | SP mode |
| :--- | :---: |
| Side-to-side registration | SP6-006-1 |
| Leading edge registration | SP6-006-2 |
| Blank margin for the trailing edge | SP6-006-3 |

## Sub-scan Magnification

A250R526.WMF
NOTE: Make a temporary test chart as shown above using A3/11" $\times 17$ " paper.

1. Place the temporary test chart on the ADF and make a copy from one of the feed stations.
2. Check the registration, and adjust using SP 6-007 if necessary. The specification is $\pm 0.5 \%$.

## 7. TROUBLESHOOTING

### 7.1 SERVICE CALL CONDITIONS

### 7.1.1 SUMMARY

There are 4 levels of service call conditions

| Level | Definition | Reset Procedure |
| :---: | :--- | :--- |
| A | To prevent the machine from being <br> damaged, the SC can only be reset by a <br> service representative (see the notes <br> below). The copier is not operational. | Enter SP mode, then turn the main <br> power switch off and on. |
| B | Turning the main power switch off and on <br> can reset the SC if incorrect sensor <br> detection caused the SC. | Turn the operation switch or main <br> power switch off and on. <br> Turning the main power switch off <br> and on can only reset a level B <br> SC. |
| C | The copier works normally except for the <br> unit related to the service call. | Turn the operation switch off and <br> on. |
| D | The SC history is updated. The machine <br> operates as usual. | The SC is not displayed. All that <br> happens is that the SC history is <br> updated. |

NOTE: 1) If the problem concerns electrical circuit boards, first disconnect then reconnect the connectors before replacing the PCBs.
2) If the problem concerns a motor lock, first check the mechanical load before replacing motors or sensors.
3) To reset a level A SC, enter SP5-810 (SC code reset) and select "1". Then hold down the "Photo mode" key and the \# key at the same time for at least 3 seconds (it is not necessary to turn the main switch off and on). If the machine beeps 5 times, the reset was successful. If it only beeps twice, the reset failed, and you need to repair the machine some more.
4) When a level A or B SC occurs while in SP mode, the display does not indicate the SC number. If this occurs, check the SC number after exiting SP mode. This does not apply to level B codes.

### 7.1.2 SC CODE DESCRIPTIONS

## SC101: Exposure Lamp Error

Definition: [B]
The standard white level was not detected properly when scanning the white plate.

## Possible Causes:

- Exposure lamp defective
- Lamp stabilizer defective
- Exposure lamp connector defective
- Dirty standard white plate
- Scanner mirror dirty or out of position
- SBU board defective
- SBU connector defective
- Lens block out of position

## SC120: Scanner Home Position Error 1

Definition: [B]
The scanner home position sensor does not detect the off condition during initialization or copying.

## Possible Causes:

- Scanner home position sensor defective
- Scanner drive motor defective
- Scanner home position sensor connector defective
- Scanner drive motor connector defective

## SC121: Scanner Home Position Error 2

Definition: [B]
The scanner home position sensor does not detect the on condition during initialization.

Possible Causes:

- Scanner home position sensor defective
- Scanner drive motor defective
- Scanner home position sensor connector defective
- Scanner drive motor connector defective

## SC122: Scanner Home Position Error 3

Definition: [B]
The scanner home position sensor detects the on condition while the scanner returns to the home position.

## Possible Causes:

- Scanner home position sensor defective
- Scanner drive motor defective
- Exposure lamp connector defective
- Scanner home position sensor connector defective
- Scanner drive motor connector defective

## SC123: Scanner Home Position Error 4

Definition: [B]
The scanner home position sensor does not detect the on condition after the scanner returns to the home position.
Possible Causes:

- Scanner home position sensor defective
- Scanner drive motor defective
- Scanner home position sensor connector defective
- Scanner drive motor connector defective

## SC192: Automatic SBU Adjustment Error

Definition: [B]
An error is detected during automatic SBU adjustment (SP4-908).
Possible Causes:

- SBU defective
- BICU board defective
- Exposure lamp regulator defective
- Exposure lamp defective
- Dirty white plate

## SC194: IPU White Level Detection Error

Definition: [B]
The level of the white standard pattern detected by the IPU (on the BICU board) is too low.

Possible Causes:

- Exposure lamp defective
- BISU board defective
- Incorrect position of the white standard pattern
- Dirty white plate
- SBU board

## SC302: Charge Roller Current Leak

Definition: [B]
A current leak signal for the charge roller is detected.

## Possible Causes:

- Charge roller damaged
- Power pack-B/C/T
- Poor connection of the OPC drum in the all-in-one cartridge

## SC320: Polygonal Mirror Motor Error

Definition: [B]
The lock signal for the polygon mirror motor is not detected within 4 seconds after the polygon motor on signal, or the lock signal is not activated for more than 200 ms after the polygon motor lock signal.

## Possible Causes:

- Polygonal mirror motor defective
- Poor connection between the polygonal mirror motor driver and the BICU board
- BICU board defective

## SC321: No Laser Writing Signal (F-GATE) Error

Definition: [B]
The laser writing signal (F-GATE) is still not LOW when the laser writing area +5 mm has passed since the laser writing start position on the drum.

Possible Causes:

- BICU board defective
- MSU board defective
- The fax controller or printer controller has a poor connection.
- Fax controller or printer controller defective

## SC322: Laser Synchronization Error

Definition: [B]
The laser synchronization signal cannot be detected by the main scan synchronization detector board for more than 5 consecutive 100 intervals.

## Possible Causes:

- The cable between the laser synchronization detector board and the BICU board has a poor connection.
- Laser synchronization detector board out of position
- Laser synchronization detector board defective
- BICU board defective
- LD unit defective

## SC324: LD Drive Current Over

Definition: [B]
The LD drive board applies more than 100 mA to the LD.

## Possible Causes:

- LD unit defective (not enough power, due to aging)
- Poor connection of the cable between the LD unit and the BICU board
- BICU board defective

## SC391: Development Bias Leak

Definition: [B]
A development bias leak signal is detected.

## Possible Causes:

- Defective development roller in the all-in-one cartridge.
- Power pack-B/C/T defective

## SC401: Transfer Roller Positive Current Error

## SC402: Transfer Roller Negative Current Error

Definition: [B]
A current leak signal for the transfer roller is detected.
The current feedback signal for the transfer roller is not detected.

## Possible Causes:

- Power pack-B/C/T defective
- Transfer unit set incorrectly
- Poor connection of the drum unit in the all-in-one cartridge
- Transfer roller damaged

## SC500: Main Motor Lock

Definition: [B]
The main motor lock signal is not detected for more than 700 ms after the main motor starts to rotate, or the lock signal is not detected for more than 700 ms during rotation after the last lock signal.

## Possible Causes:

- Too much load on the drive mechanism
- Main motor defective

## SC502: 2nd Tray Lift Malfunction

## SC503: 3rd Tray Lift Malfunction

Definition: [C]
The paper lift sensor is not activated after the tray lift motor has been on for 13 seconds.

Possible Causes:

- Tray upper lift sensor defective
- Tray lift motor defective
- Poor tray lift motor connection
- Too much load on the drive mechanism

## SC506: Paper Tray Motor Lock (Optional Paper Tray Unit Only)

Definition: [C]
A motor lock signal is not detected for more than 1.5 s after the motor starts rotation, or the lock signal is not detected for more than 1.0 s after the last lock signal detection.

## Possible Causes:

- Paper tray motor defective
- Too much load on the drive mechanism

## SC542: Fusing Temperature Warm-up Error

Definition: [A]
After the main switch is turned on, the fusing temperature either does not reach $130^{\circ} \mathrm{C}$ within 50 seconds, or does not reach the printing temperature within 70 seconds.

## Possible Causes:

- Fusing thermistor defective or out of position
- Fusing lamp open
- Fusing thermofuse open
- Power supply unit defective
- Poor connection of the fusing unit

## SC543: Fusing Overheat Error

Definition: [A]
A fusing temperature of over $231^{\circ} \mathrm{C}$ is detected for 1 second by the fusing thermistor.

Possible Causes:

- Fusing thermistor defective
- Power supply unit defective

## SC544: Fusing Low Temperature Error

Definition: [A]
A fusing temperature of less than $100^{\circ} \mathrm{C}$ is detected for 1 second by the fusing thermistor.

## Possible Causes:

- Fusing thermistor defective
- Power supply unit defective

## SC546: Unstable Fusing Temperature

Definition: [A]
The fusing temperature does not rise $3^{\circ} \mathrm{C}$ or more within 5 seconds after the fusing lamp has been on 8 seconds.
Possible Causes:

- Thermistor defective
- Poor connection of the fusing unit
- Power supply unit defective

## SC547: Zero Cross Signal Malfunction

Definition: [A]
Zero-cross signals are not detected within a certain period.
Possible Causes:

- Power supply unit defective
- Input output board
- BICU defective

## SC620: Communication Error between BICU and ADF

Definition: [B]
The BICU cannot receive a response from the ADF main board for 4 seconds or more.

Possible Causes:

- Poor connection between the BICU board and ADF main board (DF connector)
- ADF main board defective
- BICU board defective

## SC630: [D] CSS (RSS) Communication Error between Line Adapter and CSS Center

Japanese version only

## SC691: Communication Error between BICU and Fax Controller Unit

Definition: [B]
The BICU board cannot communicate with the fax control unit properly.

## Possible Causes:

- The cable between the BICU board and the fax control unit has a poor connection
- BICU board defective
- Fax control unit defective

## SC692: Communication Error between BICU and Printer Controller Board

Definition: [B]
The BICU board cannot communicate with the printer controller board properly.

## Possible Causes:

- The cable between the BICU board and the mother board has a poor connection.
- The connection between the mother board and the printer controller board is poor.
- BICU board defective
- Printer controller board defective
- Mother board defective

## SC760: ADF Gate Abnormal

Definition: [B]
The ADF Gate signal line between the ADF main board and the input/output board is disconnected.

## Possible Causes:

- ADF main board defective
- Input/output board defective
- The connection (ADF Gate line) between the ADF main board and the input/output board is poor.

## SC900: Electrical Total Counter Error

Definition: [B]
The electrical total counter is not working properly.
Possible Causes:

- NVRAM defective

## SC901: Mechanical Total Counter

Definition: [B]
The mechanical total counter is not working properly.

## Possible Causes:

- Mechanical total counter defective
- Input/output board defective
- Disconnected mechanical total counter

## SC921: MSU Hardware Error

Definition: [B]
The hardware of the MSU is defective.

## Possible Causes:

- MSU defective
- BICU defective

## SC980: Program Loading Error

Definition: [A]
The program cannot load properly.
Possible Causes:

- The connection between the BICU and the ROM board is poor.
- BICU board defective
- ROM board or the program defective

NOTE: This SC should be cleared by trying to download again from an IC Card.

## SC990: Communication Error between BICU and Input Output Board

Definition: [B]
The BICU board cannot communicate with the input/output board.

## Possible Causes:

- The connection between the BICU board and the input/output board is poor.
- BICU board defective
- Input/output board defective

## SC999: Program Version Error

Definition: [B]
The incorrect type of main software was downloaded.
Possible Causes:

- The main software for another machine was downloaded to this machine.

### 7.2 BLOWN FUSE TABLE

| Fuse | Rating |  | Symptom when tuning on the main switch |  |
| :---: | :---: | :---: | :--- | :---: |
|  | $\mathbf{1 1 5} \mathbf{V}$ | $\mathbf{2 2 0} \mathbf{\sim} \mathbf{2 4 0} \mathbf{V}$ |  |  |
| FU1 | $15 \mathrm{~A} / 250 \mathrm{~V}$ | - | No response. |  |
| FU2 | $8 \mathrm{~A} / 125 \mathrm{~V}$ | $3.15 \mathrm{~A} / 250 \mathrm{~V}$ | No response. |  |
| FU3 | $3.15 \mathrm{~A} / 125 \mathrm{~V}$ | $3.15 \mathrm{~A} / 250 \mathrm{~V}$ | Normal operation. But optional heater is not <br> working (when turning off the main switch). |  |
| FU4 | $4 \mathrm{~A} / 125 \mathrm{~V}$ | $4 \mathrm{~A} / 250 \mathrm{~V}$ | "Doors/Covers Open" LED is displayed then SC901 <br> is displayed. |  |
| FU5 | $4 \mathrm{~A} / 125 \mathrm{~V}$ | $4 \mathrm{~A} / 250 \mathrm{~V}$ | The original jam will be occurred whenever a copy <br> is made. |  |
| FU6 | $2 \mathrm{~A} / 125 \mathrm{~V}$ | $2 \mathrm{~A} / 250 \mathrm{~V}$ | "Doors/Covers Open" and "Paper Jam" LEDs are <br> displayed then SC990 is displayed. |  |

### 7.3 ELECTRICAL COMPONENT DEFECTS

### 7.3.1 SWITCHES

| Symbol | Description | CN No. | Condition | Symptom |
| :---: | :---: | :---: | :---: | :---: |
| SW1 | Main |  | Open | The copier does not turn on. |
|  |  |  | Short | The copier does not turn off. |
| SW2 | Right Door Switch 1 | 306-6 | Open | Doors/Covers open is displayed even if the right door is closed. |
|  |  |  | Short | LD5 V line is not cut even if the right door is opened. |
| SW3 | Right Door Switch 2 | 306-4 | Open | Doors/Covers open is displayed even if the right door is closed. |
|  |  |  | Short | Doors/Covers open is not displayed even if the right door is opened. |
| SW4 | Vertical Transport Cover Switch | 306-2 | Open | Doors/Covers open is displayed even if the right door is closed. |
|  |  |  | Short | Doors/Covers open is not displayed even if the right door is opened. |
| SW5 | Paper Size | 323-1, 2, 4 | Open | The CPU cannot detect proper paper size, and misfeeds may occur when a copy is made. |
|  |  |  | Short |  |

### 7.3.2 SENSORS

| Symbol | Description | CN No. | Condition | Symptom |
| :---: | :---: | :---: | :---: | :---: |
| S1 | Scanner HP | 327-8 | Open | SC194 is displayed. |
|  |  |  | Short | SC120 is displayed. |
| S2 | Original Width | 320-8, 9 | Open | The CPU cannot detect proper original size. |
| S3 | Original Length 1 | 320-3, 4 |  |  |
| S4 | Original Length 2 | 324-3, 4 | Short |  |
| S5 | Toner Near-End | 322-2 | Open | Toner end is displayed even if there are toner in the AIO cartridge. |
|  |  |  | Short | Toner near end condition cannot be detected in toner near end condition. |
| S6 | Paper End | 325-2 | Open | Paper end condition even if paper is loaded in the tray. |
|  |  |  | Short | Paper end condition cannot be detected even if there is no paper in the tray, paper jam occurs. |
| S8 | By-pass Tray Paper | 309-5 | Open | Paper cannot be detected when paper is placed in the by-pass table. |
|  |  |  | Short | By-pass paper misfeed occurs. |
| S9 | By-pass Paper Size | 321-2, 4, 5 | Open | The CPU cannot detect proper paper |
|  |  |  | Short | size in the by-pass tray. |
| S10 | Vertical Transport | 321-7 | Open | Misfeed is detected after paper pass through the vertical transport sensor. |
|  |  |  | Short | Misfeed is detected even if there is no paper. |
| S11 | Registration | 309-2 | Open | Misfeed is detected after paper pass through the registration sensor. |
|  |  |  | Short | Misfeed is detected even if there is no paper. |
| S12 | Fusing Exit | 303-6 | Open | Misfeed is detected after paper pass through the fusing exit sensor. |
|  |  |  | Short | Misfeed is detected even if there is no paper. |
| S13 | Exit Tray Paper | 321-10 | Open | Exit tray LED does not turn on even if there is paper left in the exit tray. |
|  |  |  | Short | Exit tray LED turns on even if there is no paper in the exit tray. |
| S14 | Platen Cover | 327-5 | Open | Original size cannot be detected. |
|  |  |  | Short | The correct original size may not be detected. |
| S15 | AIO Set | 323-6 | Open | "Reset the toner cartridge" is displayed even if the AIO cartridge is installed. |
|  |  |  | Short | SC402 is displayed. |
