Parts marked with " $\widehat{\$}$ " are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safty and performance of the set.

## Warning!

This product is a class A product.
If it is operated in households, offices or similar surroundings, it can produce radio interferences at other appliances, so that the user has to take adequate countermeasures.

## [1] GENERAL

## 1. Note for servicing

## Pictogram

This Service Manual uses some pictographs to assure safe operation.
Please understand the meanings of pictographs before servicing.
WARNING: If this WARNING should be ignored, a serious danger to life or a serial injury would be resulted.
CAUTION: If this CAUTION should be ignored, an injury or a damage to properties would be resulted.

## Meanings of pictographs

$\triangle$ This pictograph means that a care must be taken. In the pictograph, the concrete content is drawn. (High temperature in this example)
$Q$ This pictograph means inhibition. The concrete content of inhibition is shown in or near the pictograph. (Inhibition of disassembly in this example)
-This pictograph means a thing which must be done. (Disconnecting the power plug from the power outlet in this example)

## A. $\uparrow$ WARNING

1) Never use a power source of more than 15A, 100 V .

Avoid complex wiring, which may lead to a fire or an electric shock.
2) When any abnormality occurs, such as smoke or bad smell, do not use the machine. If used in abnormal conditions, a fire or an electric shock may be resulted.
3) Be sure to connect the grounding wire. If an electric leakage occurs without grounding, a fire or an electric shock may be resulted. To protect the machine and the power unit from lightening, grounding must be made.
4) When removing the cabinet of the machine, use an extreme care. There is a high voltage section inside the machine which may cause an electric shock when touched. Do not leave the machine with the cabinet removed. It is very dangerous for the user to touch the inside of the machine.
5) Do not damage, brake, or work the power cord. Do not put a heavy thing on the power cord. Do not pull or bend the power cord extremely. Otherwise, the power cord may be damaged to cause a fire or an electric shock.
6) Do not put a vessel with water in it on the machine. Do not put a metal piece on the machine, which may drop into the machine, causing a fire or an electric shock.
7) If water or a metal piece drops into the machine, turn off the power switch, disconnect the power plug, then remove the dropped thing.
8) Do not use a wet hand to disconnect or insert the power plug and to operate or service the machine. It may cause an electric shock.
B. $\triangle$ CAUTION

1) Avoid installation on an unstable surface or a slant surface. Otherwise, it may drop from the surface, resulting in an injury. It is advisable to use the optional paper feed desk or the exclusive-use desk.
2) Avoid installation in a humid or dusty place. Otherwise, a fire or an elctric shock may be resulted.
3) The fusing section is very high. Be careful not to burn when servicing.

4) When disconnecting the power plug from the power outlet, do not pull the power cord. Otherwise, the cord may be damaged, resulting in exposed core or disconnection, causing a fire or an electric shock.
5) Do not throw toner or a toner cartridge in a fire. Otherwise, toner may pop and burn you.
6) When using the optional paper feed desk or the exclusive-use desk, be sure to fix the adjusters on the floor, and lock the casters.
As shown in the figure, rotate the adjuster in the fixing direction until it makes contact with the floor. Lock the casters to fix the machine. (If the casters are not locked, the machine may gradually move so that the SPF cable may be rubbed with the wall, causing disconnection.

When moving the machine a little for reforming the office, turn the adjuster to release lock of the casters. (After moving, lock the adjusters and casters to fix the machine.)
7) Do not see the light source and the laser beams. Otherwise the eyes may be damaged.
8) When moving the machine, turn off the power switch and the heater switch, and be sure to disconnect the power plug from the power outlet. If not, the cord may be damaged to cause a fire or an electric shock.
9) It is very dangerous to perform reception or printing during servicing. When servicing with the cabinet removed, pull out the telephone line and the printer cable from the machine. (The laser print function and the Fax function are options.)
10) There are some sharp edges inside the machine. Be careful not to injure your fingers when servicing.

| :--- | :--- |

Condition: With SPF
H. Multi copy

Max. number of multi copy
99 sheets

## I. Warmup time

| Warmup time | Approx. 35 sec <br> (Condition: Standard condition) |
| :--- | :--- |
| Pre-heat | Available |

## J. Copy magnification ratio

| Fixed magnification ratio | AB system: 50, 70, 81, 86, 100, 115, <br> $122,141,200 \%$ |
| :--- | :--- |
| Inch system: 50, 64, 77, 95, 100, 121, |  |
| $129,141,200 \%$ |  |, | Zooming | $50 \sim 200 \%$ |
| :--- | :--- |
| Independent <br> zooming/vertical | Available (50~200\%) |
| Independent zooming <br> (horizontal) | Available (50~200\%) |

## K. Print density

| Density mode | Auto/Manual/Photo |
| :--- | :--- |
| No. of manual adjustment | 5 steps (Manual/Photo) |
| Toner save mode | Set by the user program |

## L. Void width

| Void area | Lead edge 1~4mm, rear edge 4mm or less <br> (Duplex 4mm or less), both sides 4mm or less |
| :--- | :--- |
| Image loss | Max. 4mm in total of lead edge and rear edge, <br> max. 4mm in total of right and left edges <br> (Normal copy) |

## M. Auto duplex

| Standard/Option | Standard provision (AR-205 only) ( $D \rightarrow D / D$ <br> $\rightarrow$ S enable only when RSPF is installed) <br> Not available for AR-160/161/200 |
| :--- | :--- |

## N. Paper exit/finishing

| Paper exit <br> section capacity | Face down 250 sheets |  |
| :--- | :--- | :--- |
| Job separator | Job separator, option (AR-TR2) |  |
|  | Upper: FAX/Printer, Lower: Copier <br> Upper: 100 sheets, Lower 150sheets |  |
|  | Available (Job separator upper step) |  |
| Finishing | Electronic sort board: Option (AR-EB3) |  |
| Electronic sort <br> capacity | A4 (8.5" $\times 11^{\prime \prime}$ ) standard document 60 sheets |  |
| Offset function | AR-160 | None |
|  | AR-161 | Available (by the shifter) |
|  | AR-200 |  |
|  | AR-205 |  |
| Staple function | None |  |

## (1) Electronic sort board (Option)

| Electronic sort | Sorting | 60 sheets of A4 standard <br> documents |
| :--- | :--- | :--- |
|  | Grouping60 sheets of A4 standard <br> documents |  |
| Rotation copy | If there is paper of same size as the <br> document, the image is rotated to copy even <br> though the paper is set in the different <br> direction from the document direction. |  |
| 2 in 1, 4 in 1 | Copies of 2 pages or 4 pages are integrated <br> into one surface. Divided by solid lines, <br> (Selectable by the user program.) |  |
| Edge erase | Images surrounding the document are erased <br> when copying. (Adjustable in 0~20mm by the <br> user program.) |  |
| Center erase | The image at the center is erased when <br> copying. (Adjustable in 0~20mm by the user <br> program.) |  |
| Margin shift | Binding margin is made at the left edge of the <br> set documents. |  |

## P. Additional functions

| APS* | $\bigcirc$ | (APS not available by flowing in <br> during use of SPF) |
| :--- | :---: | :--- |
| AMS $^{*}$ | $\bigcirc$ | (AMS not available by flowing in <br> during use of SPF) |
| Duplex | $\bigcirc \times$ | AR-205 only available |
| Document count | $\times$ |  |
| Sorter | $\triangle$ | When the electronic sort board <br> installed. |
| Independent <br> zooming | $\bigcirc$ | Vertical/Horizontal: 50 ~ 200\% |
| 1 set 2 copy | $\bigcirc$ | Enlargement inhibited, inhibited <br> during the use of SPF |
| Binding margin | $\triangle$ | Shift width 9mm |
| Edge erase | $\triangle$ | Width 5mm (Adjustable 0 ~ 20mm) |
| Black-white <br> reversion | $\bigcirc$ | Whole surface only |
| 2 in 1, 4 in 1 | $\triangle$ |  |
| Rotation copy | $\triangle$ | (AR-200/205 and AR-161 for |
| Memory copy | $\bigcirc \times$ | USA/Canada: Available) |
| Pre-heat function | $\bigcirc$ | Conditions set by the user program |
| Auto power shut <br> off function | $\bigcirc$ | Conditions set by the user program |
| Auto tray <br> switching | $\bigcirc$ |  |
| Message display | $\triangle$ | (FAX/Printer extension) |
| User program | $\bigcirc$ |  |
| Total counter | $\bigcirc$ |  |

[^0]
## Q. Other specifications

| Photoconductor type | OPC (Organic Photo Conductor) |
| :--- | :--- |
| Photoconductor drum dia. | 30 mm |
| Copy lamp | Xenon lamp |
| Developing system | Dry 2-component magnetic brush <br> development |
| Charging system | Saw teeth charging |
| Transfer system | (+) DC corotron |
| Separation system | (-) DC corotron |
| Fusing system | Heat roller |
| Cleaning system | Contact blade |

## R. Package form

\section*{| Body | Body/Accessaries |

## 2. Environment conditions

## A. Transport condition

(1) Transport conditions

(2) Storage conditions (packed conditions)

B. Use conditions

## C. Life (packed conditions)

Photoconductor drum ( 36 months from the production month) Developer, toner ( 24 months from the production month)

## 3. Production number identification

## <TD cartridge>

The label on the drum cartridge shows the date of production.

## <Drum cartridge>

The label on the drum cartridge shows the date of production.

| $\bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$ |  |  |
| :---: | :---: | :---: |
| LThe end digit of production year |  | each Production <br> 99) month |
|  |  |  |
| Division | No. | October ...... |
| Ex production | 1 | December ...Y |
| Option | 2 |  |
| Same pack | 3 |  |

## 4. Consumable parts recycling procedure

A. TD cartridge

1) Check the external view.

Note: Be careful especially of breakage of the pins and the ATC sensor connector shown below.

2) Remove the waste toner box unit.

3) Remove the developing unit.

## 4) Remove the DV blade.

Note: Be sure to remove adhesive completely.
Remove adhesive together with the base PET.

5) Tilt the developing unit, rotate the DV gear clockwise, and remove developer.
6) Clean and remove developer on the MG roller and toner on the developing doctor completely with a vacuum cleaner or an air blower.
7) Shake the developer bottle about 10 times and supply developer to the developing unit.
Turn the stirring roller to distribute developer evenly.
8) Install the toner box.
9) Shake the toner bottle about 20 times and install the toner supply hose to the toner bottle.
10) Remove the toner cap. While visually inspecting from the toner supply port, stop the TH shaft at the vertical position. (The TH mylar is on the lower side.) (Turn the gear on the back of the toner box counterclockwise to set the TH mylar on the lower side.)

11) Face the toner supply port of the toner box upward with the toner bottle put straight, and insert the supply hose into the toner supply port.

12) Lift the toner bottle and supply toner.
13) Remove the supply hose from the toner box with care not to spill toner, and attach the toner cap.
Note: If the toner cap is not attached properly, toner splash may occur.
14) Install the waste toner box.
15) Check the operations of the DV lever and the toner box shutter.
16) Wipe and clean the developer unit with alcohol, and attach the DV blade to it.
(Note) - Dry alcohol completely before attaching the DV blade,

- When attaching the DV blade, be careful not to scratch it and eliminate slack.
- After attaching, be careful not to scratch and damage the DV blade.

17) Shake the developing unit 5 times left and right horizontally.
18) Check the distribution state of developer on the MG roller. Rotate the MG roller and visually check for no improper distribution of developer which may be caused by foreign materials.
19) Mark the number of times of recycling on the back of the toner box with white paint.
Max. times of recycling: 5 times

## B. Drum unit

1) Check the external view.

- Check for damage or cracks on the boss and the boss hole.
- Check to insure that the waste toner pipe shutter slides smoothly.
- Check to insure that the star ring and the CRU washer rotate smoothly.

2) Remove the drum cover. (4 Lock Tabs)

3) Remove the drum fixing plate and the photoconductor drum. (Note) Dispose the drum fixing plate which was removed.

4) Check the cleaning blade and the red felt for no damage.

- If there is any damage, execute all procedures from item 5) and later.
- If there is no damage, execute the procedure of item 12).

5) Remove the main charger.
(Cleaning the screen grid and the sawteeth.)

6) Remove the cleaning blade.

Note: Dispose the cleaning blade which was removed.

7) Clean the cleaning section and the waste toner pipe to remove waste toner completely with a vacuum cleaner.
8) Remove the felt and duplex tape completely.

Note: Be careful not to scratch or bend the sub blade.
9) Attach the cleaning blade.
10) Attach the felt.

11) Attach the main charger.
12) Attach the drum fixing plate and the photoconductor drum. Apply grease to the inside of the photoconductor drum. (Dia. 2)
13) Attach the detection gear.

Note: - The detection gear is not installed to the drum cartridge packed with the main body. Add a new one.

14) Attach the drum cover.

Note: After attaching the drum cover, do not make a copy.
15) Mark the number of times of recycling on the side of the cover with white paint.
Max. times of recycling: 5 times

## [4] EXTERNAL VIEWS AND INTERNAL STRUCTURES

## 1. Appearance

## *1

ON: Indicates that the machine is in the energy saving (pre-heat) mode.
Blink: Indicates that the machine is in the process of resetting from the energy saving mode or just after supplying the power. (During warmup)
OFF: Indicates that resetting from the energy saving mode is completed and that the fusing temperature is in ready state.
The combinations of the above display lamps are as follows:
( $\bigcirc=\mathrm{ON}, \mathrm{O}=\mathrm{OFF}$ )

| Lamp | Immediately after <br> power ON | Ready | Copying |
| :--- | :---: | :---: | :---: |
| Pre-heat lamp | Blink | $\bigcirc$ | $\bigcirc$ |
| Ready lamp | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Other lamps | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

| :--- | :---: | :---: | :---: | :---: |
| Pre-heat lamp | $\bigcirc$ | $\bigcirc$ | Blink | Blink |
| Ready lamp | $\bigcirc$ |  | $\bigcirc$ | $\bigcirc$ |
| Other lamps | $\bigcirc$ |  | $\bigcirc$ | $\bigcirc$ |

*2
*i Maintenance lamp
When the set count number (set by the simulation) is reached, the lamp lights up. The machine does not stop.
$\therefore$ TD cartridge replacement required indicator
When toner density is lower than a specified level, the TONER DEVELOPER CARTRIDGE REPLACEMENT indicator lights up to warn the user.
If toner is not added after approximately 300 sheets are copied, the indicator starts blinking and machine starts to supply toner. (Toner Developer cartridge replacement indicator keeps lighting up)
If toner density is not back to specific level after two minutes, the READ indicator goes out and Toner Developer indicator starts blinking, and the copier stops.
๑ Photoconductor cartridge replacement lamp
When the copy count reaches 29,000 after installing a Photoconductor cartridge, the lamp lights up.
When 1,000 copies are made after that, the lamp blinks instead of lighting. The machine does not stop.
Press and hold the clear key for 5 sec in the user simulation mode to display the remaining life of the photoconductor cartridge in 3 digits $\times 2$ lines on the copy quantity display.
$\square$ Paper required indicator
8V Misfeed indicator

## 4. Motor, solenoid, clutch

| No. | Name | Code | Function, operation |
| :---: | :--- | :---: | :--- |
| 1 | Exhaust fan motor | VFM | Cools the inside of the machine. |
| 2 | Shifter motor | SHTM | Shifts the paper exit tray. (AR-161/200/205) |
| 3 | Toner motor | TM | Toner supply |
| 4 | Mirror motor | MRM | Drives the optical mirror base (scanner unit). |
| 5 | Duplex motor | Switchback operation and paper exit motor in duplex. (only <br> AR-205) |  |
| 6 | Cooling fan motor | CFM | Cools the inside of the machine. |
| 7 | Main motor | MM | Drives the machine. |
| 8 | Paper feed solenoid | RRS | Solenoid for paper feed from cassette |
| 9 | Resist roller solenoid | Resist roller rotation control solenoid |  |
| 10 | Manual paper feed clutch | MPFC | Drives the manual paper feed roller. |
| 11 | Manual paper feed solenoid | Manual paper feed solenoid |  |
| 12 | Manual paper transport clutch | CPFC2 | Drives the manual paper transport roller. |
| 13 | Second tray transport clutch | FSOL2 | Second tray transport solenoid |
| 14 | Second tray transport solenoid | FSOL1 | First tray transport solenoid |
| 15 | First tray transport solenoid | PSOL2 | Second tray transport solenoid |
| 16 | Second tray paper feed solenoid | CPFC2 | Drives the cassette paper feed roller. |
| 17 | Paper feed clutch | PSOL1 | First tray transport solenoid |
| 18 | First tray paper feed solenoid | CPFC1 | Drives the first tray transport roller. |
| 19 | First tray paper feed clutch | RRC | Drives the resist roller |
| 20 | PS clutch |  |  |

## 5. Sensor, switch

| No. | Name | Code |  |
| :---: | :--- | :---: | :--- |
| 1 | Mirror home position sensor | MHPS | Detects the mirror (scanner unit) home position. |
| 2 | Document size sensor | DSIN | Paper size detection |
| 3 | Toner density sensor | TCS | Toner quantity detection |
| 4 | Paper exit sensor (paper exit side) | POD1 | Detects paper exit. |
| 5 | OC open/close sensor | DSWR | Side door open/close detection |
| 6 | Right door switch | P FULL | Paper exit tray section full detection <For JOB separator> |
| 7 | Paper full sensor | LFTHP | Paper feed tray lift up detection <For JOB separator> |
| 8 | Lift sensor | JTRAY | Job separator tray lower limit detection |
| 9 | Lower limit sensor | PDPX | Paper transport detection |
| 10 | Paper exit sensor (DUP side) | SFTHP | Shifter home position detection |
| 11 | Shifter home position sensor | RTH | Fusing section temperature detection |
| 12 | Thermistor |  | Fusing section abnormally high temperature detection |
| 13 | Thermostat | PIN | Paper transport detection |
| 14 | 1st tray detection switch |  | 2nd tray detection |
| 15 | Paper in | MPED | Manual transport detection |
| 16 | 2nd tray detection switch | DRS2 | Second cassette door open/close detection |
| 17 | Manual sensor | PPD2 | Paper transport detection |
| 18 | Second cassette door open/close sensor | CSS1 | First tray paper empty detection |
| 19 | Second cassette paper entry sensor | CSS2 | Second tray paper empty detection |
| 20 | First tray paper empty sensor | DRST | New drum detection switch |
| 21 | Second tray paper empty sensor | MAIN SW | Turns ON/OFF the main power source. |
| 22 | Drum reset switch |  |  |
| 23 | Power switch |  |  |

## 6. PWB unit

| No. | Name | Function, operation |
| :---: | :--- | :--- |
| 1 | Copy lamp invertor PWB | Copy lamp control |
| 2 | Power PWB | AC power input/DC power control |
| 3 | High voltage PWB | High voltage control |
| 4 | CCD sensor PWB | Image scanning |
| 5 | Main PWB (MCU) | Machine control/Image process |
| 6 | Paper exit interface PWB | Paepr exit, finishing control |
| 7 | Tray interface PWB | Paper tray control |
| 8 | Electronic sort function | Operation panel input/Display |
| 9 | Operation main PWB | Operation panel input/Display, operation panel section control |

## 7. Cross sectional view

| No. | Name |  |
| :---: | :--- | :--- |
| 1 | Copy lamp | Image radiation lamp |
| 2 | Copy lamp unit | Operates in synchronization with No. 2/3 mirror unit to radiate documents sequentially. |
| 3 | LSU unit | Converts image signals into laser beams to write on the drum. |
| 4 | Lens unit | Reads images with the lens and the CCD. |
| 5 | MC holder unit | Supplies negative charges evenly on the drum. |
| 6 | Paper exit roller | Used to discharge paper. |
| 7 | Transport roller | Used to transport paper. |
| 8 | Upper heat roller | Fuses toner on paper (with the teflon roller). |
| 9 | Lower heat roller | Fuses toner on paper (with the silicon rubber roller). |
| 10 | Waste toner transport roller | Transports waste toner to the waste toner box. |
| 11 | Drum unit | Forms images. |
| 12 | Transfer charger unit | Transfer images (on the drum) onto paper. |
| 13 | Duplex transport roller | Transports paper for duplex (only AR-205). |
| 14 | Resist roller | Takes synchronization between the paper lead edge and the image lead edge. |
| 15 | Manual paper feed tray | Manual paper feed tray |
| 16 | Manual paper feed roller | Reflects the images from the copy lamp unit to the lens unit. |
| 17 | No. 2/3 mirror unit | Transports paper from the manual paper feed port. |
| 18 | Manual transport roller | Transports paper from the 2nd tray. |
| 19 | 2nd tray paper transport roller | Picks up paper from the 2nd tray. |
| 20 | 2nd tray paper feed roller (semi-circular <br> roller) | Picks up paper from the 1st tray. <br> 211st tray paper feed roller (semi-circular <br> roller) |
| 22 | MG roller | Puts toner on the OPC drum. |
|  | DUP transport roller | Paper transport roller in duplex. |

## [5] UNPACKING AND INSTALLATION

## 1. Installing conditions

1) Copier installation

Do not install your copier in areas that are:

- damp, humid, or very dusty
- exposed to direct sunlight
- poorly ventilated
- subject to extreme temperature or humidity changes, e.g., near an air conditioner or heater.
- Be sure to allow the required space around the machine for servicing and proper ventilation.

## 2) Power source

- Use an exclusive-use power outlet. If the power plug of this machine is inserted into a power outlet commonly used with other illumination units, flickers of the lamp may be result. Use a power outlet which is not used commonly with any illumination units.
- Avoid complex wiring.

3) Grounding wire connection.

- To avoid danger, be sure to connect a grounding wire. If no grounding wire is connected and a leakage occurs, a fire or an electric shock may be result.

## 2. Removal of protective material and fixing screw

1) Remove all tapes and protective material.

- Remove all tapes, then open the document cover and remove the protective material of sheet shape

2) Remove the fixing screw.

- Use a coin to remove the fixing screw.
- The fixing screw is required when transporting the machine. Keep it in the tray. (Refer to the later description.)

## 3. Installation of developing cartridge

1) Open the manual paper feed tray.

2) Lift the knob and slide the side cover gently.

3) Open the front cover.

- Hold the both edge gently and open the front cover.

4) Remove the screw from the upper section of the insertion port of the developer cartridge.

5) Shake a new developer cartridge a few times as shown.

- Shake it horizontally as shown with the arrow.

6) Remove the pawls (3 positions) of the protective cover at the rear side.

7) Remove the protective cover.

- Pull the cover in the arrow direction to remove.

8) Insert the developer cartridge.

- Gently insert the developer cartridge along the guide until it locks.

9) Fix the developer cartridge with the fixing screw which is packed together with the machine.

10) Close the front cover $A$, then close the side cover $B$.

- When closing the front cover, gently press the both sides.
- When closing the side cover, hold the knob.
- When closing the covers, be sure to close the front cover first, then close the side cover. If closed in a wrong sequence, the covers may be broken.

## 4. Removal and storage of fixing screw

1) Lift the knob and gently pull out the tray.

2) Hold the paper pressure plate and turn the fixing screw in the arrow direction.

3) Store the fixing pin and the fixing screw in the tray.

- Store the fixing screw which was removed in the above procedure 2 and the fixing screw which was removed in procedure 2 of 2 .
- Removal of protective material and fixing screw in the storage place in the tray.

## 5. Changing the copy paper size in the tray

1) Gently lift and pull out the paper tray until it stops.
2) Push the pressure plate down until it locks in place.
3) Squeeze the lock lever of the front guide and slide the front guide to match the width of the paper.

4) Move the left guide to the appropriate slot as marked on the tray.

- When using $11^{\prime \prime} \times 17^{\prime \prime}$ copy paper, store the left guide in the slot at the left front of the paper tray.

5) Load copy paper into the tray.
6) Place the paper size plate in the front of the paper tray.

- The paper size indication which shows through the slot on the front of the copier should match the selected paper size.

7) Push the paper tray firmly back into the copier.
8) To set the selected paper size, press and hold down the PAPER SIZE ENTER key. The selected paper feed location indicator and the corresponding paper size (which has been set) indicator will blink. All other indicators will go out.

- For paper size setting, ensure that the COPY mode has been selected. However, if printer or facsimile output is being performed, paper size setting cannot be made even in the COPY mode.

9) Use the TRAY SELECT key to select the paper tray of which the paper size has been changed.

- Each time the TRAY SELECT key is pressed, a paper tray is indicated with a blinking paper feed location indicator. If an optional paper feed unit is not installed, this operation is not needed.

10) Use the ORIGINAL SIZE ENTER key to select the paper size which is set.

- Each time the ORIGINAL SIZE ENTER key is pressed, a paper size will be indicated with a blinking paper size indicator.

11) Press the START key and then the PAPER SIZE ENTER key.

- To change the paper size setting of another tray, repeat steps 9 to 10 after pressing the START key.

## [6] ADJUSTMENTS

## 1. Adjustment item list

| Section |  | Adjustment item |  | Adjustment procedure/SIM No. |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A | Process section | (1) | Developing doctor gap adjustment |  | Developing doctor gap adjustment |
|  |  | (2) | MG roller main pole position adjustment |  | MG roller main pole position adjustment |
|  |  | (3) | Developing bias voltage output adjustment |  |  |
|  |  | (4) | Main charger voltage output adjustment |  |  |
| B | Mechanism section | (1) | Image lead edge position adjustment |  | SIM 50-1 |
|  |  | (2) | Main scanning direction (FR direction) distortion balance adjustment |  | No. 2/3 mirror base unit installing position adjustment |
|  |  |  |  |  | Copy lamp unit installing position adjustment |

## 2. Copier adjustment

## A. Process section

## (1) Developing doctor gap adjustment

1) Loosen the developing doctor fixing screw $A$.
2) Insert a thickness gauge of 1.5 mm to the three positions at 20 mm and 130 mm from the both ends of the developing doctor as shown.

3) Push the developing doctor in the arrow direction, and tighten the developing doctor fixing screw. (Perform the same procedure for the front and the rear frames.)
4) Check the clearance of the developing doctor. If it is within the specified range, then fix the doctor fixing screw with screw lock.

* When inserting a thickness gauge, be careful not to scratch the developing doctor and the MG roller.

## <Adjustment specification>

Developing doctor gap
Both ends ( 20 mm from the both ends): $1.5_{-0.15}^{+0.15 m}$
C (Center) ( 150 mm from the both ends): $1.55_{-0.2}^{+0.5} \mathrm{~mm}$

## (2) MG roller main pole position adjustment

1) Remove and separate the waste toner box and put the developing unit on a flat surface.
2) Tie a string to a needle or a pin.
3) Hold the string and bring the needle close to the MG roller horizontally. (Do not use paper clip, which is too heavy to make a correct adjustment.) (Put the developing unit horizontally for this adjustment.)
4) Do not bring the needle into contact with the MG roller, but bring it to a position 2 or 3 mm apart from the MG roller. Mark the point on the MG roller which is on the extension line from the needle tip.
5) Measure the distance from the marking position to the top of the doctor plate of the developing unit to insure that it is 18 mm . If the distance is not within the specified range, loosen the fixing screw A of the main pole adjustment plate, and move the adjustment plate in the arrow direction to adjust.

## (3) Developing bias voltage adjustment

Note: - Use a digital multi-meter with an internal resistance of $10 \mathrm{M} \Omega$ or more.

1) Set the digital multi-meter range to DC 700 V .
2) Put the test rod of the digital multi-meter on the developing bias voltage output check pin.
3) Turn on the power.
4) Adjust the adjustment volume VR31 so that the output voltage is within the specified range shown below.

<Adjustment specification>

| Mode | Specification |  |
| :---: | :---: | :---: |
| Developing bias voltage | DC-400 $\pm 8 \mathrm{~V}$ | VR31 |

## (4) Grid bias voltage adjustment

Note: - Use a digital multi-meter with an internal resistance of $10 \mathrm{M} \Omega$ or more.

1) Set the digital multi-meter range to DC 700 V .
2) Put the test rod of the digital multi-meter on the grid bias voltage output check pin.
3) Turn on the power.
4) Adjust the adjustment volumes (VR51, VR52) so that the output voltage is within the specified range. (The voltage is outputted in the grid bias high output mode during warming up, and in the grid bias low output mode after completion of warming up.)

<Adjustment specification>

| Mode | Specification |  |
| :--- | :---: | :---: |
| Grid bias LOW | DC-400 $\pm 20 \mathrm{~V}$ | VR52 |
| Grid bias HIGH | DC-525 $\pm 10 \mathrm{~V}$ | VR51 |

## B. Mechanism section

(1) Image lead edge position adjustment (SIM 50-1)
a. OC image lead edge position adjustment

Note: In advance to this adjustment, the sub scanning magnification ratio adjustment must be performed.

1) Set a scale on the OC table as shown below.

2) Make a copy.
3) Check the copy output. If necessary, perform the following adjustment procedures.
4) Execute SIM 50-1.
5) Set the OC lead edge position set value (Exposure display <AUTO> ON) to " 99 ."
The OC image scanning start position is shifted inside the document edge.
6) Set the main cassette lead edge void adjustment value (Exposure display <PHOTO> ON) * to "1."
The lead edge void becomes the minimum.
7) Set the print start position value (Exposure display <EXP1> ON) to " 99 " and make a copy.
The print start position is shifted inside the document edge.

*The dimension varies depending on the model.
8) Measure the image loss R of the copied image. Enter the set value of the image scanning lead edge position (Exposure display <AUTO> ON) again.

- 1 step of the set value corresponds to about 0.127 mm shift.
- Calculate the set value from the formula below.
$99-R / 0.127(\mathrm{~mm})=$ Image loss set value $<R$ : Image loss measurement value (mm)>

* The scanning edge is set.
(A line may be printed by scanning the document edge.)
Example: $99-4 / 0.127=99-31.5=$ about 67
Note: If the set value is not obtained from the above formula, perform the fine adjustment.

9) Measure the distance H between the paper lead edge and the image print start position. Set the image print start position set value (Exposure display <EXP1> ON) again.

- 1 step of the set value corresponds to about 0.127 mm shift.
- Calculate the set value from the formula below.
$99-\mathrm{H} / 0.127(\mathrm{~mm})=$ Image print start position set value $<\mathrm{H}$ : Print start position measurement value (mm)>

*Fit the print edge with the paper edge, and perform the lead edge adjustment.
Example: $99-5 / 0.127=99-39.4=$ about 59
Note: If the set value is not obtained from the above formula, perform the fine adjustment.

10) Set the main cassette lead edge void adjustment value (Exposure display <PHOTO>ON)* again.

- 1 step of the set value corresponds to about 0.127 mm shift.
- Calculate the set value from the formula below.
$B / 0.127(\mathrm{~mm})=$ Lead edge void adjustment value $<B$ : Lead edge void (mm)>

Example: When setting the lead edge void to 2.5 mm :

$$
2.5 / 0.127=\text { about } 20
$$

Note: If the set value is not obtained from the above formula, perform the fine adjustment.

* Second cassette lead edge void adjustment: Exposure display <AUTO + MANUAL + PHOTO>
Multi bypass tray lead edge void adjustment: Exposure display <MANUAL + PHOTO>
OC second print surface (Auto duplex) lead edge position adjustment: Density display <EXP3>
OC second print surface (Auto duplex) lead edge void adjustment: Exposure display <None>
* For the adjustment procedure, set to $S \rightarrow D$ mode

Note: Before performing the second print surface lead edge position adjustment and the lead edge void adjustment, be sure to perform the first print surface lead edge position adjustment in advance, and be sure to perform the second print surface lead edge position adjustment and then the lead edge void adjustment in this sequence.
<Adjustment specification>

| Adjustment mode | SIM | LED | Set value | Spec value | $\begin{gathered} \text { Set } \\ \text { range } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| OC image lead edge position | $\begin{gathered} \text { SIM } \\ 50-1 \end{gathered}$ | AUTO | $\begin{gathered} 99 \\ \mathrm{R} / 0.127 \end{gathered}$ | Lead edge void: 1 4 mm Image loss: 3 mm or less | 1~99 |
| Main cassette lead edge void |  | PHOTO | B/0.127 |  |  |
| Second cassette lead edge void |  | AUTO + MANUAL <br> + PHOTO |  |  |  |
| Multi bypass tray lead edge void |  | MANUAL <br> + PHOTO |  |  |  |
| Print start position |  | EXP1 | $\begin{aligned} & 99- \\ & \mathrm{H} / 0.127 \end{aligned}$ |  |  |
| OC second print surface lead edge position adjustment | $\begin{gathered} \text { SIM } \\ 50-1^{*} \end{gathered}$ | EXP 3 | 1 step: 0.127 mm shift |  |  |
| OC second print surface lead edge void adjustment |  | No display | 1 step: 0.127 mm shift |  |  |

* (Set to $S \rightarrow$ D mode for before execution)
b. SPF image lead edge position adjustment

1) Set a scale on the OC table as shown below.

Note: Since the printed copy is used as a test chart, put the scale in paralled with the edge lines.
2) Make a copy, Then use the copy output as an original to make an SPF copy again.
3) Check the copy output. If necessary, perform the following adjustment procedures.
4) Execute SIM 50-1.
5) Set the SPF lead edge position set value (Exposure display <MANUAL> ON) so that the same image is obtained as that obtained in the previous OC image lead edge position adjustment.

## <Adjustment specification>

| Adjustment mode | SIM | LED | Set value | Spec value | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SPF image lead edge position | $\begin{aligned} & \text { SIM } \\ & 50-1 \end{aligned}$ | MANUAL | $\begin{gathered} 1 \text { step: } \\ 0.127 \mathrm{~mm} \\ \text { shift } \end{gathered}$ | Lead edge void: 1 4mm Image loss: 3mm or less | 1~99 |

## c. Rear edge void adjustment

1) Set a scale as shown in the figure below.

2) Set the document size to A4 (8.5" $\times 11^{\prime \prime}$ ), and make a copy at $100 \%$.
3) If necessary, perform the following adjustment procedure.

4) Execute SIM 50-1 and set the density mode to AUTO + PHOTO (Rear edge void).
The currently set adjustment value is displayed.
5) Enter the set value and press the start key.

The correction value is stored and a copy is made.

* Second print surface (auto duplex) rear edge void adjustment: Exposure display <EXP 5>
* Set to $\mathrm{S} \rightarrow \mathrm{D}$ mode before execution.

Note: Before performing the second print surface rear edge void adjustment, be sure to perform the second print surface lead edge position adjustment. Never reverse the sequence.
<Adjustment specification>

| Mode | SIM | LED | Set value | Specifi- <br> cation | Set <br> range |
| :--- | :---: | :---: | :--- | :---: | :---: |
| Rear edge <br> void | SIM 50-1 | AUTO + <br> PHOTO | 1 step: <br> 0.127 mm <br> shift | 4 mm or <br> less |  |
| Second print <br> surface rear <br> edge void | SIM 50-1* | EXP 5 |  | 4mm or <br> less |  |

* Set to $\mathrm{S} \rightarrow \mathrm{D}$ mode before execution

## d. Paper off center adjustment

1) Execute SIM 50-1 and set the density mode of AUTO + MANUAL (Left edge void) to 1.
2) Set a test chart (UKOG-0089SCZZ) on the document table.
3) Select a paper feed port and make a copy.

Compare the copy and the test chart. If necessary, perform the following adjustment procedure.
4) Execute SIM 50-10.

After completion of warmup, shading is performed and the currently set off center adjustment value of each paper feed port is displayed.
5) Enter the set value and press the start key.

The correction value is stored and a copy is made.

* Second print surface (auto duplex) off-center adjustment: Exposure display: None
<Adjustment specification>

| Mode | SIM | LED | Set value | Specification | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Paper off center | SIM 50-10 | Selected tray ON | Add 1: <br> 0.127 mm <br> shift to R <br> side. <br> Reduce 1: <br> 0.127 mm <br> shift to L <br> side. | Single: <br> Center <br> $\pm 2.0 \mathrm{~mm}$ | 1~99 |
| Second print surface off-center | SIM 50-10 | No display |  | Duplex: Center $\pm 2.5 \mathrm{~mm}$ |  |

* When SIM 48-01 (AE) is executed, the document off-center is automatically set. Therefore, the off-center adjustment previously described in 5) must be adjusted again.

## e. Left edge void area adjustment

Note: Before performing this adjustment, be sure to check that the paper off center adjustment (SIM 50-10) is completed.

1) Set a test chart (UKOG-0089SCZZ) on the document table.
2) Select a paper feed port and make two copies.

Compare the second copy and the test chart. If necessary, perform the following adjustment procedure.

* The first copy does not show the void. Be sure to check the second copy.

3) Execute SIM 50-1 and set the density mode to AUTO + MANUAL (Left edge void).
The currently set adjustment value is displayed.
(When the off center adjustment previously described is performed, " 0 " is displayed.)
4) Enter the set value and press the start key.

The correction value is stored and a copy is made.
<Adjustment specification>

| Mode | SIM | LED | Set value | Specification | Set <br> range |
| :--- | :---: | :---: | :--- | :--- | :---: |
| Left <br> edge <br> void | SIM <br> $50-1$ | AUTO + <br> MANUAL | 1 step: <br> 0.127 mm <br> shift | $0.5 \sim 4 \mathrm{~mm}$ | $1 \sim 99$ |

* When the left edge void is set with the paper off center adjusted, the both edge void is automatically adjusted.
(2) Main scanning direction (FR directional distortion balance adjustment)

1) Remove the OC glass and the right cabinet.

2) Loosen the copy lamp unit wire fixing screw.

3) Manually turn the mirror base drive pulley and bring No. $2 / 3$ mirror base unit into contact with the positioning plate.
At that time, if the front frame side and the rear frame side of No. 2/3 mirror base unit are brought into contact with the positioning plate at the same time, the mirror base unit parallelism is proper.
If one of them is in contact with the positioning plate, perform the adjustment of 4).

4) Loosen the set screw of the scanner drive pulley which is not in contact with No. $2 / 3$ mirror base unit positioning plate.
5) Without moving the scanner drive pulley shaft, manually turn the scanner drive pulley until the positioning plate is brought into contact with No. 2/3 mirror base unit, then fix the scanner drive pulley.

6) Put No. $2 / 3$ mirror base unit on the positioning plate again, push the projections on the front frame side and the rear frame side of the copy lamp unit to the corner frame, and tighten the wire fixing screw.

## (3) Main scanning direction (FR direction) distortion adjustment

This adjustment must be performed in the following cases:

- When the mirror base drive wire is replaced.
- When the lamp unit, or No. $2 / 3$ mirror holder is replaced.
- When a copy as shown is made.

1) Set $A 3$ ( $11^{\prime \prime} \times 17^{\prime \prime}$ ) white paper on the original table as shown below.

Fit the paper edge and the glass holding plate edge.
2) Open the original cover and make a normal ( $100 \%$ ) copy.
3) Measure the width of the black background at the lead edge and at the rear edge.

La: Lead edge black background width
Lb: Rear edge black background width
If the width (La) of the black background at the lead edge is equal that (Lb) at the rear edge, there is no need to execute the following procedures of 4) ~7).
4) Loosen the mirror base drive pulley fixing screw on the front frame side or on the rear frame side.

- When La < Lb

Turn the mirror base drive pulley on the front frame side in the arrow direction A. (Do not move the mirror base drive pulley shaft.)

- When La > Lb

Turn the mirror base drive pulley on the front frame side in the arrow direction A. (Do not move the mirror base drive pulley shaft.)

Rear side

5) Tighten the mirror base drive pulley fixing screw.

## <Adjustment specification>

$\mathrm{La}=\mathrm{Lb}$
6) Execute the main scanning direction (FR) distartion balance adjustment previously described in 2 ) again.

## (4) Sub scanning direction (scanning direction) distortion adjustment

When there is no skew copy in the mirror base scanning direction and there is no horizontal error (right angle to the scanning direction), the adjustment can be made by adjusting the No. $2 / 3$ mirror base unit rail height.
Before performing this adjustment, be sure to perform the horizontal image distortion adjustment in the laser scanner section.
This adjustment must be performed in the following cases:

- When the mirror base wire is replaced.
- When the copy lamp unit or No. $2 / 3$ mirror unit is replaced.
- When the mirror unit rail is replaced or moved.
- When a following copy is made.

Copy B

1) Making of a test sheet

Make test sheet by drawing parallel lines at 10 mm from the both ends of A3 (11" x 17") white paper as shown below. (These lines must be correctly parallel to each other.)

2) Make a normal (100\%) copy of the test sheet on $A 3$ (11" $x$ 17") paper. (Fit the paper edge with the glass holding plate edge.)
3) Measure the distances (La, Lb, Lc, Ld) at the four corners as shown below.

When $L a=L b$ and $L c=L d$, no need to perform the procedures 4) and 5).
4) Move the mirror base $B$ rail position up and down (in the arrow direction) to adjust.

- When La > Lb

Shift the mirror base B rail upward by the half of the difference of La - Lb.

- When La < Lb

Shift the mirror base B rail downward by the half of the difference of Lb - La.

Example: When $\mathrm{La}=12 \mathrm{~mm}$ and $\mathrm{Lb}=9 \mathrm{~mm}$, shift the mirror base $B$ rail upward by 1.5 mm .

- When Lc > Ld

Shift the mirror base B rail downward by the half of the difference of Lc - Ld.

- When Lc < Ld

Shift the mirror base B rail downward by the half of the difference of Ld - Lc.

* When moving the mirror base rail, hold the mirror base rail with your hand.

## <Adjustment specification>

## $L a=L b, L c=L d$

5) After completion of adjustment, manually turn the mirror base drive pulley, scan the mirror base A and mirror base B fully, and check that the mirror bases are not in contact with each other.

* If the mirror base rail is moved extremely, the mirror base may be in contact with the frame or the original glass. Be careful to avoid this.
(5) Main scanning direction (FR direction) magnification ratio adjustment (SIM 48-1)
Note: Before performing this adjustment, be sure to check that the CCD unit is properly installed.

1) Put a scale on the original table as shown below.

2) Execute SIM 48-1.
3) After warmup, shading is performed and the current set value of the main scanning direction magnification ratio is displayed on the display section in 2 digits.
4) Select the mode and press the start key again.
5) Auto correction mode (AE lamp ON)

The mirror unit moves to the shading position, and the reference width of the reference white plate is scanned, and the correction value is automatically calculated from that scanned value.
The correction value is displayed and a copy is made.
6) Compare the scale image and the actual scale.

If a fine adjustment is required, switch to the manual correction mode with the magnification ratio display key and perform fine adjustment.
7) Manual correction mode (TEXT lamp ON)

Enter the set value and press the start key.
The set value is stored and a copy is made.

## <Adjustment specification>

Note: A judgement must be made with 200 mm width, and must not be made with 100 mm width.

| Mode | Specification | SIM | Set value | Set range |
| :--- | :--- | :---: | :--- | :---: |
| Main scanning | At normal: | SIM | Add 1: | $1 \sim 99$ |
| direction | $\pm 1.0 \%$ | $48-1$ | $0.1 \%$ increase |  |
| magnification |  |  | Reduce 1: |  |
| ratio |  |  | $0.1 \%$ decrease |  |

- Error in the auto correction mode

| Display | Content | Major cause |
| :--- | :--- | :--- |
| Copy <br> quantity <br> display "--" | The correction <br> value calculated is <br> over $5 \%$. | - Improper position of <br> reference width line of <br> the reference white plate <br> - Improper installation of <br> CCD unit |
| Paper jam <br> lamp ON | Reference line <br> scanning error | - Defective CCD <br> - No reference white plate |

* When SIM 48-01 (AE) is executed, the main scanning direction magnification ratio is automatically set. Therefore, the main scanning direction magnification ratio adjustment previously described in 5) must be made again.

## (6) Sub scanning direction (scanning direction) magnification ratio adjustment (SIM 48-2, SIM 48-5)

a. OC mode in copying

Note: • Before performing this adjustment, be sure to check that the CCD unit is properly installed.

1) Put a scale on the original table as shown below, and make a normal (100\%) copy.
2) Compare the scale image and the actual image. If necessary, perform the following adjustment procedures.
3) Execute SIM 48-2.
4) After warmup, shading is performed and the current set value of the sub scanning direction magnification ratio is displayed on the display section in 2 digits.
5) Enter the set value and press the start key.

The set value is stored and a copy is made.

## <Adjustment specification>

| Mode | Specification | SIM | Set value | Set range |
| :--- | :---: | :---: | :--- | :---: |
| Sub scanning | Normal | SIM | Add 1: | $1 \sim 99$ |
| direction | $\pm 1.0 \%$ | $48-2$ | $0.1 \%$ increase |  |
| magnification |  |  | Reduce 1: |  |
| ratio |  |  | $0.1 \%$ decrease |  |
| (OC mode) |  |  |  |  |

## b. RSPF sub scanning direction magnification ratio

Note: • Before performing this adjustment, be sure to check that the CCD unit is properly installed.

- Before performing this adjustment, the OC mode adjustment in copying must be completed.

1) Put a scale on the original table as shown below, and make a normal (100\%) copy to make a test chart.

Note: Since the printed copy is used as a test chart, put the scale in parallel with the edge lines.
2) Set the test chart on the SPF and make a normal (100\%) copy.
3) Compare the scale image and the actual image. If necessary, perform the following adjustment procedures.
4) Execute SIM 48-5.
5) After warmup, shading is performed.

The auto density lamp lights up and the current front surface sub scanning direction magnification ratio correction value is displayed in two digits on the display section.
6) Enter the set value and press the start key.

The set value is stored and a copy is made.
7) Change the mode from the duplex original mode to the simplex original mode.
"MANUAL" lamp lights up and the current back surface sub scanning direction magnification ratio is displayed in two digits on the display section.
8) Enter the set value and press the start key.

The set value is stored and a copy is made.

## <Adjustment specification>

| Mode | Specification | SIM | Set value | Set range |
| :--- | :---: | :---: | :--- | :---: |
| Sub scanning | Normal | SIM | Add 1: | $1 \sim 99$ |
| direction | $\pm 1.0 \%$ | $48-5$ | $0.1 \%$ increase |  |
| magnification |  |  | Reduce 1: |  |
| ratio |  |  | $0.1 \%$ decrease |  |
| (SPF mode) |  |  |  |  |

## (7) Off center adjustment (SIM 50-13, SIM 50-16)

a. OC mode

Note: • The operation of SIM 50-13 is the same as that of SIM 48-01 (Photo LED ON)

1) Make a test chart as shown below and set it so that its center line is fit with the original guide center mark.

* To make a test chart, draw a line on A3 or $11^{\prime \prime} \times 17$ " paper at the center in the paper transport direction.

2) Make a normal copy from the manual paper feed tray, and compare the copy and the test chart.
If necessary, perform the following adjustment procedures.
3) Execute SIM 50-13.
4) After warmup, shading is performed and the current set value of the off center adjustment is displayed on the display section in 2 digits.
5) Enter the set value and press the start key.

The set value is stored and a copy is made.
<Adjustment specification>

| Mode | Specification | SIM | Set value | Set range |
| :---: | :---: | :---: | :---: | :---: |
| Original off center mode (OC mode) | Single: <br> Center $\pm 2.0 \mathrm{~mm}$ | $\begin{gathered} \text { SIM } \\ 50-13 \end{gathered}$ | Add 1: <br> 0.1 mm shift to | $1 \sim 99$ |
|  | Duplex: <br> Center $\pm 2.5 \mathrm{~mm}$ |  | $R$ side Reduce 1: 0.1 mm shift to L side |  |

## b. SPF original off-center adjustment

Note: - Before performing this adjustment, be sure to check that the paper off center is properly adjusted.

1) Make a test chart for the center position adjustment and set it on the SPF.

## <Adjustment specification>

Draw a line on a paper in the scanning direction.
2) Make a normal copy from the manual paper feed tray, and compare the copy and the original test chart.
If necessary, perform the following adjustment procedures.
3) Execute SIM 50-16.
4) After warmup, shading is performed and the current set value of the off center adjustment at each paper feed port is displayed on the display section in 2 digits.
5) Enter the set value and press the start key.

The set value is stored and a copy is made.
<Adjustment specification>

| Mode | Specification | SIM | Set value | Set range |
| :---: | :---: | :---: | :---: | :---: |
| Original off center mode (SPF mode) | Single: <br> Center $\pm 3.0 \mathrm{~mm}$ | $\begin{gathered} \text { SIM } \\ 50-16 \end{gathered}$ | Add 1: <br> 0.1 mm shift to | $1 \sim 99$ |
|  | Duplex: <br> Center $\pm 3.5 \mathrm{~mm}$ |  | $R$ side Reduce 1: 0.1 mm shift to L side |  |

(8) OC (SPF) open/close detection position adjustment

1) Set $A 4$ or $81 / 2^{\prime \prime} \times 11^{\prime \prime}$ paper on the OC table.

Check that the document size display on the operation panel indicates the correct size of the set paper.
2) Close the OC (SPF) with a small clearance for insertion of your hand left, and remove the paper from the OC table.
The document size display does not change from the display in 1).
3) Open the OC (SPF) slowly until the display on the operation panel changes (all the document size display lamps are turned off), and measure dimension $A$ shown below under that state.

<Spec value>
OC (SPF) open/close position A: 207~302mm
4) If the OC (SPF) open/close position A is not $207 \sim 302 \mathrm{~mm}$, adjust the open/close sensor mounting plate position as shown below.

## Open/close sensor mounting plate

Factory setting : second from the top
(9) Original sensor adjustment (SIM 41-3) <Other than AR-160>

1) Execute SIM 41-2.
2) Set A3 (11" $x$ 17") paper on the OC table.
3) Press the start key again.
4) The sensor level of the original sensor is automatically checked and the value with an original - 40 is made as the threshold value for scanning. (Automatic setting)
5) Execute SIM 41-3.
6) The light reception level of the original sensor is displayed. (The mode selection is made with the magnification ratio display key.)
The first digit of the copy quantity display shows "A": Light reception level display
The first digit of the copy quantity display shows "b": Original judgement level display
7) By changing the paper set on the original table, the original size LED sensed by the sensor is lighted.

## C. Image density adjustment

(1) Copy mode (SIM 46-1)

1) Set a test chart (UKOG-0162FCZZ) on the OC table as shown below.

2) Put several sheets of $A 3$ or $11^{\prime \prime} \times 17^{\prime \prime}$ white paper on the test chart.
3) Execute SIM 46-1.
4) After warmup, shading is performed and the current set value of the density level is displayed on the display section in 2 digits.
For mode selection, use the density select key.
5) Change the set value with the 10 -key to adjust the copy image density.
6) Make a copy and check that the specification below is satisfied.

## <Adjustment specification>

| Density <br> mode | Display <br> lamp | Exposure <br> level | Sharp Gray <br> Chart output | Set value | Set <br> range |
| :--- | :---: | :---: | :---: | :--- | :---: |
| Auto | Auto | - | "3" is slightly <br> copied. | The greater the <br> set value is, the | $1 \sim 99$ |
| Manual | Manual | 3 | "3" is slightly <br> copied. | greater the <br> density is. |  |
| Photo | Photo | 3 | "3" is slightly <br> copied. | The smaller the <br> set value is, the <br> smaller the <br> density is. |  |
| Toner <br> save | Manual/ <br> Photo | 3 | "3" is slightly <br> copied. |  |  |

## [7] SIMULATIONS

## 1. Entering the simulation mode

Perform the following procedure to enter the simulation mode.
Clear key $\rightarrow$ Interrupt key $\rightarrow$ "0" key $\rightarrow$ Interrupt key $\rightarrow$ Main code $\rightarrow$ Start key $\rightarrow$ Sub code $\rightarrow$ Start key

## 2. Cancelling the simulation mode

When the clear all key is pressed, the simulation mode is cancelled. When the interruption key is pressed, the process is interrupted and the screen returns to the sub code entering display.

* After canceling the simulation mode, be sure to turn OFF/ON the power and check the operation.

## 3. List of simulations

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ | Contents | * |
| :---: | :---: | :---: | :---: |
| 1 | 1 | Mirror unit operation check |  |
|  | 2 | Optical system sensor operation check |  |
| 2 | 1 | SPF aging | B |
|  | 2 | SPF sensor operation check | B |
|  | 3 | SPF motor forward rotation operation check | B |
|  | 4 | SPF motor reverse rotation operation check | B |
|  | 8 | SPF paper feed solenoid operation check | B |
|  | 9 | RSPF reverse solenoid operation check | B |
|  | 10 | RSPF paper exit gate solenoid operation check | B |
|  | 11 | SPF PS release solenoid operation check | B |
| 3 | 2 | Shifter job separator sensor operation check | DB |
|  | 3 | Shifter operation check | D |
|  | 4 | Job separator operation check | B |
|  | 11 | Shifter Home Position Check |  |
| 5 | 1 | Operation panel display check |  |
|  | 2 | Heater lamp lighting check, cooling fan motor operation check |  |
|  | 3 | Copy lamp lighting check |  |
| 6 | 1 | Paper feed solenoid operation check |  |
|  | 10 | Main cassette semi-circular roller drive |  |
| 7 | 1 | Aging with warmup time display |  |
|  | 4 | Warmup saving |  |
|  | 6 | Intermittent aging |  |
|  | 8 | Warmup time display |  |
| 9 | 1 | Duplex motor forward rotation operation check | C |
|  | 2 | Duplex motor reverse rotation operation check | C |
|  | 4 | Duplex motor rotation speed adjustment | C |
|  | 5 | Duplex motor switchback time adjustment | C |
| 10 |  | Toner motor operation check |  |
| 14 |  | Trouble (except for U2) cancel |  |
| 16 |  | U2 trouble cancel |  |
| 20 | 1 | Maintenance counter clear |  |
| 21 | 1 | Maintenance cycle setting |  |
|  | 2 | Mini maintenance cycle setting (Japan only) |  |
| 22 | 1 | Maintenance counter display |  |
|  | 2 | Maintenance preset value display |  |
|  | 3 | JAM memory display |  |
|  | 4 | Total JAM counter display |  |
|  | 5 | Total counter display |  |
|  | 6 | Developing counter display |  |
|  | 7 | Developing preset counter value display (Japan only) | A |
|  | 8 | SPF counter display | B |
|  | 9 | Paper feed counter display |  |
|  | 12 | Drum counter display |  |
|  | 14 | Copier ROM version display |  |
|  | 15 | Trouble memory display |  |

| Main code | Sub code | Contents | * |

| 63 | 1 | Shading data check |  |
| 64 | 1 | Self printing mode |  |
| 67 | 14 | Printer Flash ROM Data Download | B |

*A: Not used in the AR-160/161/200/205.
B: Only when an option is installed.
C: AR-205 only
D: Other than AR160/161

## 4. Contents of simulations

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ | Contents | Details of | operation | Initial value | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | Mirror unit operation check | Used to execute scanning at the sp magnification ratio. | ed corresponding to the set | 100\% | 50 ~ 200\% |
|  | 2 | Optical system sensor operation check | Display <br> <Lighting when the sensor is ON> <br> MHPS: Paper empty LED |  |  |  |
| 2 | 1 | SPF aging <br> <Only when an option is installed> | Used to perform SPF document tran The paper size is not detected. (Exc of 1 m or greater.) <br> With SPF installed: Single transport With RSPF installed: Duplex transpo | sport. <br> uding postcards, extra large sheet <br> operation <br> operation | 100\% | 50 ~ 200\% |
|  | 2 | SPF sensor operation check <br> <Only when an option is installed> | <Lighting at sensor ON> <br> PW1: JAM LED <br> PW2: Paper empty LED <br> PW3: Machine position JAM LED <br> PW4: SPF JAM LED <br> PL1: Manual paper feed tray select LED <br> PL2: Second cassette position JAM LED <br> P-IN: SPF select LED <br> SPF COVER OPEN: Main cassette select LED |  |  |  |
|  | 3 | SPF motor forward rotation operation check <Only when an option is installed> | Used to rotate the SPF motor forward for 10 sec . |  |  |  |
|  | 4 | SPF motor reverse rotation operation check <Only when an option is installed> | Used to rotate the SPF motor reversely for 10 sec . |  |  |  |
|  | 8 | SPF paper feed solenoid operation check <Only when an option is installed> | Used to drive the SPF paper feed solenoid (PSOL) at the cycle of 500 msec ON and 500 msec OFF 20 times. |  |  |  |
|  | 9 | RSPF reverse solenoid operation check <Only when an option is installed> | Used to drive the RSPF reverse solenoid (RSOL) at the cycle of 500 msec ON and 500 msec OFF 20 times. |  |  |  |
|  | 10 | RSPF paper exit gate solenoid operation check <Only when an option is installed> | Used to drive the RSPF paper exit gate solenoid (GSOL) at the cycle of 500 msec ON and 500 msec OFF 20 times. |  |  |  |
|  | 11 | SPF PS release solenoid operation check <Only when an option is installed> | Used to drive the SPF PS release solenoid at the cycle of 500 msec ON and 500 msec OFF 20 times. |  |  |  |

| Main code | Sub code | Contents | Details of operation | Initial value | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | 11 | Shifter Home Position check | Used to drive the shifter motor |  |  |
| 7 | 1 | Aging with warmup time display | Execute the simulation input with the copier side cover open, then close the side cover, and the machine will start warming up. Warm up time is counted up every second and it is displayed. After completion of warmup, count up is terminated. When the clear all key is pressed ready lamp is lighted and the copy quantity is entered and the start key is pressed, copying is made to make the set quantity of copies. At that time, the paper size does not matter. |  | 1~99 |
|  | 4 | Warmup saving | Used to bring the machine to the ready state without warmup. |  | 1 ~ 99 |
|  | 6 | Intermittent aging | After completion of warmup, counting is stopped and the ready lamp is lighted. When the copy quantity is entered and the start key is pressed, copying is made to make the set quantity of copies. After 3 sec standby, copying is made again to make the set quantity of copies. After that this operation is repeated. The paper size does not matter. |  | 1 ~ 99 |
|  | 8 | Warmup time display | Execute the simulation input with the copier side cover open, then close the side cover, and the machine will starts warming up. Warm up time is counted up every second and it is displayed. |  | 1 ~ 99 |
| 9 | 1 | Duplex motor forward rotation operation check <Only AR-205> | Used to rotate the duplex motor forward for 30 sec . |  |  |
|  | 2 | Duplex motor reverse rotation operation check <Only AR-205> | Used to rotate the duplex motor reversely for 30 sec . |  |  |
|  | 4 | Duplex motor rotation speed adjustment <br> <Only AR-205> | The currently set duplex motor rotation speed set value is displayed. When the set value is entered and the start key is pressed, the set value is stored. | 6 | 1~13 |
|  | 5 | Duplex motor switchback time adjustment <br> <Only AR-205> | The currently set duplex motor switchback time set value is displayed. When the set value is entered and the start key is pressed, the set value is stored. | 50 | 18 ~ 76 |
| 10 |  | Toner motor operation check | Used to operate the toner motor for 30 sec . <br> Note: If this simulation is executed with the toner hopper installed, toner is automatically supplied to the developer. Be careful of overtoner. |  |  |
| 14 |  | Trouble (except for U2) cancel | Used to cancel troubles except for U2. |  |  |
| 16 |  | U2 trouble cancel | Used to cancel U2 trouble. |  |  |
| 20 | 1 | Maintenance counter clear | Used to clear the maintenance counter. *2 |  |  |

*2: Display after clearing each counter
$000(0.75 \mathrm{sec}) \rightarrow$ Blank $(0.35 \mathrm{sec}) \rightarrow 000(0.75 \mathrm{sec}) \rightarrow$ Blank $(1.0 \mathrm{sec}) \rightarrow$ Repetition

*1: Each counter display method
To display 123456: $123(0.75 \mathrm{sec}) \rightarrow$ Blank $(0.35 \mathrm{sec}) \rightarrow 456(0.75 \mathrm{sec}) \rightarrow$ Blank $(1.0 \mathrm{sec}) \rightarrow$ repetition
*2: Display after clearing each counter
$000(0.75 \mathrm{sec}) \rightarrow$ Blank $(0.35 \mathrm{sec}) \rightarrow 000(0.75 \mathrm{sec}) \rightarrow$ Blank $(1.0 \mathrm{sec}) \rightarrow$ Repetition

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ | Contents | Details of operation |  | Initial value | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 22 | 15 | Trouble memory display | Used to display the actually occurred trouble codes on the display on the operation panel. When the start key is pressed during the main code display, the sub code is displayed. Max. 20 recent trouble codes are stored. |  |  |  |
|  | 16 | Duplex print counter display <Only AR-205> | Used to display the current duplex print counter value. *1 |  |  |  |
|  | 17 | Copy counter display | Used to display the current copy counter value. *1 |  |  |  |
|  | 18 | Printer counter display <Only when an option is installed> | Used to display the current printer counter value. *1 |  |  |  |
|  | 19 | Electronic sort counter display <Only when an option is installed> | Used to display the current electronic sort counter value. *1 |  |  |  |
|  | 20 | FAX print counter display <Only when an option is installed> | Used to display the current FAX print counter value. *1 |  |  |  |
|  | 21 | Scanner counter display | Used to display the current scanner counter value. |  |  |  |
| 24 | 1 | JAM memory, JAM counter clear | Used to clear the JAM memory and the JAM counter. *2 |  |  |  |
|  | 2 | Trouble memory clear | Used to clear the trouble memory. *2 |  |  |  |
|  | 4 | SPF counter clear <Only when an option is installed> | Used to clear the SPF counter. *2 |  |  |  |
|  | 5 | Duplex counter clear <Only AR-205> | Used to clear the duplex counter. *2 |  |  |  |
|  | 6 | Paper feed counter clear | Used to clear the paper feed counter. *2 |  |  |  |
|  | 7 | Drum counter clear | Used to clear the drum counter. *2 |  |  |  |
|  | 8 | Copy counter clear | Used to clear the copy counter. *2 |  |  |  |
|  | 9 | Printer counter clear <Only when an option is installed> | Used to clear the printer counter. *2 |  |  |  |
|  | 10 | Electronic sort counter clear <Only when an option is installed> | Used to clear the electronic sort counter. *2 |  |  |  |
|  | 11 | FAX print counter clear <Only when an option is installed> | Used to clear the FAX print counter. *2 |  |  |  |
|  | 13 | Scanner counter clear | Used to clear the scanner counter. *2 |  |  |  |
| 25 | 1 | Main motor operation check | Execute the simulation with the developer cartridge removed, and the main motor will rotate for 30 sec . At that time, the cooling motor rotates at a low speed. |  |  |  |
|  | 10 | Polygon motor operation check | Used to drive the polygon motor for 30 sec . |  |  |  |

*2: Display after clearing each counter
$000(0.75 \mathrm{sec}) \rightarrow$ Blank $(0.35 \mathrm{sec}) \rightarrow 000(0.75 \mathrm{sec}) \rightarrow$ Blank $(1.0 \mathrm{sec}) \rightarrow$ Repetition

| Main code | Sub code | Contents | Details of operation | Initial value | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 26 | 1 | Option switch display | Used to display the installed option on the operation panel. (The LED corresponding to the installed option is lighted.) |  |  |
|  | 3 | Auditor setting | Used to display the current auditor setting with the numbers at right. After entering the set value, press the start key, and the set value is stored. | 0 | 0~2 |
|  | 5 | Counter mode setting | Used to set the print counter mode in A3 or $11^{\prime \prime} \times 17$ ". <br> Used to display the currently set counter value with the numbers at right. After entering the set value, press the start key, and the set value is stored. | 0 | 0~3 |
|  | 6 | Destination setting | Used to display the current destination setting with the numbers at right. After entering the set value, press the start key, and the set value is stored. | 0 | $0 \sim 11$ |

| Main <br> code | Sub <br> code | Contents | Details of operation | Initial value | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 26 | 10 | Model name setting | Used to set the model name of the machine used with the following numbers. After entering the set value, press the start key and the set value is stored. | 0 | $0 \sim 19$ |
|  | 22 | Language setting | Used to display the current setting of the language information with the number at right. After entering the set value, press the start key, and the set value is stored. | 0 | $0 \sim 7$ |
|  | 30 | CE mark conformity control setting | Used to display the current setting of CE mark conformity control with the number at right. After entering the set value, press the start key, and the set value is stored. | 0 | $0 \sim 1$ |
|  | 32 | Fan rotation duty change state setup | The currently set fan motor rotation duty is displayed with the following numbers. After entering the set value, press the start key to store the set value. | 0 | 0.1 |
|  | 38 | Cancel of stop at drum life over <br> <Not Used> | The currently set value is displayed. After entering the set value, press the start key to store the set value. | 0 | $0 \sim 1$ |
|  | 42 | Transfer timing adjustment | After completion of warm up, shading is performed and the currently set transfer timing adjustment value is displayed. | 5 | 1, 3, 5, 7, 9 |
|  | 50 | Black-white reversion function setup | The current setup of black-white reversion is displayed with the following numbers. After entering the set value, press the start key to store the set value. | 0 | 0.1 |

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ | Contents | Details of operation | Initial value | Set range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 26 | 51 | Sort/Group copy temporary stop function setup <Only when an option is installed> | Used to set whether temporary stop for every 250 -sheet print (150-sheet print when the job separator is installed) is made or not during copying with the sort/group function. The current setup is displayed with the following numbers. After entering the set value, press the start key to store the set value. | 1 | 0.1 |
| 30 | 1 | Machine sensor operation check | Used to check the sensors in the machine transport system with LED on the operation panel. |  |  |
| 41 | 2 | OC document sensor adjustment <Other than AR-160> | Used to read the document sensor input value with paper and perform the sensor detection level adjustment. For the adjustment procedure of the document sensor input value, refer to the previous descriptions. |  |  |
| 41 | 3 | Document sensor light reception level display <br> <Other than AR-160> | Used to display the light reception level and the detection level of the document sensor. (The sensor level adjusted with SIM 41-2 is displayed.) |  |  |
| 42 | 1 | Developing counter clear | Used to clear the Developing counter. *2 |  |  |
| 43 | 1 | Fusing temperature setting | Used to display the current setting of the fusing temperature at right. After selecting the fusing temperature with the magnification ratio display key, press the start key, and the set value is stored. The set range is $155 \sim 190^{\circ} \mathrm{C}$. Use the magnification ratio key to adjust the value by $-5^{\circ} \mathrm{C}$. | 180 | 155 ~ 190 |
| 46 | 1 | Copy density level adjustment | After completion of warmup, shading is performed and the currently set copy density level is displayed. For the adjustment procedure, refer to the previous descriptions. | 48 | 1~99 |

*2: Display after clearing each counter
$000(0.75 \mathrm{sec}) \rightarrow$ Blank $(0.35 \mathrm{sec}) \rightarrow 000(0.75 \mathrm{sec}) \rightarrow$ Blank $(1.0 \mathrm{sec}) \rightarrow$ Repetition

| 50 | 19 | Duplex rear edge void adjustment <br> <Only when an option is installed> | After completion of warmup, shading is performed and currently set value is displayed. | $\begin{aligned} & 37 \\ & 52 \\ & 70 \end{aligned}$ | 1 ~ 99 |
| 51 | 2 | Resist amount adjustment | After completion of warmup, shading is performed and the currently set resist amount adjustment value is displayed. | $\begin{aligned} & 50 \\ & 51 \\ & 50 \\ & 50 \\ & 48 \end{aligned}$ | $\begin{aligned} & 1 \sim 99 \\ & (6 \sim 94 \text { for } \\ & \text { the duplex } \\ & \text { only }) \end{aligned}$ |
| 63 | 1 | Shading data check | The copy lamp is shifted to the shading position and it is lighted with the reference voltage at AD conversion fixed (Vref- $=0.5 \mathrm{~V}$, Vref+ $=4.5 \mathrm{~V}$ ). The level of one pixel at the center at that time is displayed. |  |  |
| 64 | 1 | Self print mode | Disregards the optical system and performs self printing in 1 by 2 mode. |  |  |
| 67 | 14 | Printer Flash ROM Data Download <Only when an option is installed> | The machine enters the version up mode of the printer PWB flash ROM. For details, refer to the AR-PB8 Service Manual. |  |  |

## [8] USER PROGRAMS

The user programs allow the parameters of certain functions to be set, changed, or canceled as desired.

## 1. List of user programs

This copier has the following user programs.

| Program <br> No. | Program <br> name | Auto clear <br> time |
| :---: | :--- | :--- |
| 2 | Sets the auto clear time. The copier <br> returns to the initial settings when the <br> auto clear time elapses after the last <br> copy is made. |  |
| 3 | Preheat <br> mode | Auto power the time that elapses before the <br> shut-off <br> copier enters the preheat mode after <br> any operation is made. |
| timer |  |  | | Sets the time that elapses before the |
| :--- |
| copier enters the auto power shut-off |
| mode after any operation is made. |\(\left|\begin{array}{|c|l|}\hline Stream <br>

feeding <br>
mode*\end{array} \quad \begin{array}{l}Enables or disables the stream feeding <br>
mode when an optional SPF or RSPF <br>

is installed.\end{array}\right|\)| Auto power |
| :--- |
| shut-off |
| setting |$\quad$| Enables or disables the auto power |
| :--- |
| shut-off mode. |

| Program <br> No. | Program <br> name | Description |
| :---: | :--- | :--- |
| 20 | Image <br> rotation in <br> duplex <br> copying | Enables or disables image rotation <br> $\left(180^{\circ}\right)$ of the front side in one-sided to <br> two-sided copying or two-sided to one- <br> sided copying. |
| 22 | Location of <br> the margin* | Selects the location of the expanded <br> margin. |

* These programs do not affect the copier functions unless certain optional equipment is installed.

## 2. Setting the user programs

1) Press and hold the light (©) key for more than 5 seconds until all the alarm indicators ( $\times, \therefore$, $\square, \square$, and 8 V ) blink and "- -" appears in the copy quantity display.
2) Enter a program number using the numeric keys.

- The selected program number will blink in the copy quantity display.
- If a mistake is made in steps 2) to 4), press the CLEAR ( © ) key. The copier will return to step 2).
- The program numbers are shown in the table below.

For example, to change the setting of the auto power shut-off timer, press key 3.

| Program name | Program No. |
| :---: | :---: |
| Auto clear time | 1 |
| Preheat mode | 2 |
| Auto power shut-off timer | 3 |
| Stream feeding mode | 4 |
| Auto power shut-off setting | 5 |
| Border line for 2 in 1 or 4 in 1 | 6 |
| Rotation copy | 7 |
| Auto paper select mode | 8 |
| Auto tray switching | 9 |
| Auditing mode | 10 |
| Account number entry | 11 |
| Account number change | 12 |
| Account number deletion | 13 |
| Number of copies per account | 14 |
| Resetting account | 15 |
| Erase width adjustment | 16 |
| Layout in 2 in 1 copy | 17 |
| Layout in 4 in 1 copy | 18 |
| Offset of paper output tray | 19 |
| Image rotation in duplex copying | 20 |
| Location of the margin | 22 |

3) Press the START key.

- For programs 1 to 9 and 16 to 19, the entered program number will be steadily lit on the left side of the copy quantity display and the currently selected parameter number for the program will blink on the right side.
- For programs 10 to 15 (programs for auditing accounts), the display varies with the program number.

4) Select the desired parameter using the numeric keys.

- The entered parameter number will blink on the right side of the copy quantity display.
- The parameters are shown in the table below.

For example, to change the setting of the auto power shut-off timer to 60 min., press key 2.

| Program name <br> Auto clear time | Parameters |  |
| :---: | :---: | :---: |
|  | 0 | OFF |
| Auto clear time | 1 | 30sec |
|  | *2 | 60 sec |
|  | 3 | 90 sec |
|  | 4 | 120sec |
|  | 5 | 10 sec |
| Preheat mode** | 0 | OFF |
|  | **1 | 30sec |
|  | 2 | 60 sec |
|  | * 3 | 90sec |
|  | 4 | 120 sec |
| Auto power shut-off timer | * 1 | 30 min |
|  | 2 | 60 min |
|  | 3 | 90 min |
|  | 4 | 120 min |
|  | 5 | 240 min |
| Stream feeding mode | * 0 | OFF |
|  | 1 | ON |
| Auto power shut-off setting | 0 | OFF |
|  | * 1 | ON |
| Border line for 2 in 1 or 4 in 1 | * 0 | OFF |
|  | 1 | ON |
| Rotation copy | 0 | OFF |
|  | * 1 | ON |
| Auto paper select mode | 0 | OFF |
|  | * 1 | ON |
| Auto tray switching | 0 | OFF |
|  | * 1 | ON |
| Erase width adjustment | 0 | Omm (0") |
|  | 1 | 5 mm (1/4") |
|  | * 2 | 10 mm (1/2") |
|  | 3 | 15 mm (3/4") |
|  | 4 | 20 mm (1") |
| Layout in 2 in 1 copy | * 1 | Pattern 1 |
|  | 2 | Pattern 2 |
| Layout in 4 in 1 copy | * 1 | Pattern 1 |
|  | 2 | Pattern 2 |
|  | 3 | Pattern 3 |
|  | 4 | Pattern 4 |
| Offset of paper output tray | 0 | Upper OFF, lower OFF |
|  | * 1 | Upper ON, lower ON |
|  | 2 | Upper ON, lower OFF |
|  | 3 | Upper OFF, lower ON |
| Image rotation in duplex copying | *0 | OFF |
|  | 1 | ON |
| Location of the margin | *1 | Left |
|  | 2 | Top |

Factory default settings are indicated with an asterisk (*).
** In European countries, the default setting of the preheat mode is 1 ( 30 sec. .). For other programs, factory-default settings in these countries are same to those shown above with an asterisk (*).
Note: If you select " 0 " (OFF) in a program, the corresponding function will be disabled.
5) Press the START key.

- The right-hand number in the copy quantity display will be steadily lit and the entered value will be stored.

6) To continue with other user programs, press the © key and then repeat steps 2 to 5 . To exit the user program mode, press the light (○) key.

- All the alarm indicators will go out.

Settings for auditing accounts

## A. Program No. 10: Auditing mode

If the auditing mode is enabled, copying is limited to operators with an assigned 3 -digit account number. A maximum of 20 , 3 -digit account numbers can be assigned. Use program No. 11 to register account numbers.
When program No. 10 is entered, the current setting ( 0 : OFF, 1:ON) will blink on the right side of the copy quantity display.

1) Select the desired setting using the numeric keys.

0: OFF
1: ON
2) Press the START key.

- The setting will be stored.

3) To continue with other user programs, press the © key and enter another program number. To exit the user program mode, press the light (©) key.

## B. Program No. 11: Account number entry

Program No. 11 is used to register accounts. When program No. 11 is entered,

1) Enter a 3 -digit account number using the numeric keys.

- Any 3-digit number except "000" can be registered as an account number.

2) Press the START key.

- If a number that is already registered or "000" is entered, the number will blink in the copy quantity display.

3) Repeat steps 1 and 2 for other account numbers.
4) To continue with other user programs, press the © key and enter another program number. To exit the user program mode, press the light (©) key.

## C. Program No. 12: Account number change

Program No. 12 is used to change account numbers. When program No. 12 is entered, an account number will appear in the copy quantity display.

- If no account number has been registered, "12E" will appear in the copy quantity display. Press the © key. The system will return to step 2 on page 39.

1) Use the copy ratio display (8)) key to select the account number to be changed.

- Use the © $\%$ key to advance through the account numbers.

2) Press the START key.

- The account number will be erased and "- - -" will blink in the copy quantity display.

3) Enter a new account number using the numeric keys.
4) Press the START key.

- If a number that is already registered or " 000 " is entered, the number will blink in the copy quantity display.

5) Repeat steps 1 to 4 for other account numbers.
6) To continue with other user programs, press the © key and enter another program number. To exit the user program mode, press the light (©) key.

## D. Program No. 13: Account number deletion

- If no account number has been registered, "13E" will appear in the copy quantity display. Press the © key. The system will return to step 2 on page 39 .

1) To delete an individual account, press the 0 key.

To delete all accounts, press key 1.
2) Press the START key.

- If you have pressed the 0 key in step 1 , an account number will appear in the copy quantity display. Proceed to step 3).
- If you have pressed key 1, all account numbers will be deleted. Proceed to step 5).

3) Use the copy ratio display (8) key to select the account number to be deleted.

- Use the \% key to advance through the account numbers.

4) Press the START key.

- The specified account will be deleted.

5) To continue with other user programs, enter another program number. To exit the user program mode, press the light (©) key.

## E. Program No. 14: Number of copies per account

- If no account number has been registered, "14E" will appear in the copy quantity display. Press the © key. The system will return to step 2 on page 39.

1) Use the copy ratio display ( (\%) ) key to select the account number. I Use the \% key to advance through the account numbers.
2) Press and hold down the 0 key.

- The number of copies made against the specified account number will be displayed. The two higher digits and the three lower digits will appear alternately while the 0 key is pressed.
Example: 1,234 copies
- The upper limit for the number of copies is 49,999 . If the number of copies made reaches 50,000 , the number will be reset to 0 and counting will start again from 0.

3) Repeat steps 1 and 2 for other account numbers.
4) To continue with other user programs, press the © key and select another program number. To exit the user program mode, press the light ( \% ) key.

## F. Program No. 15: Resetting account

- If no account number has been registered, "15E" will appear in the copy quantity display. Press the © key. The DM Sytem will return to step 2 on page 39.

1) To reset an individual account, press the 0 key.

To reset all accounts, press key 1.
2) Press the START key.

- If you have pressed the 0 key in step 1 , an account number will appear in the copy quantity display. Proceed to step 3.
- If you have pressed key 1, the number of copies against all account numbers will be reset. Proceed to step 5.

3) Use the copy ratio display ( (\%) ) key to select the accountnumber to be reset.

- Use the (6) key to advance through the account numbers.

4) Press the START key.

- The number of copies against the specified account number will be reset.

5) To continue with other user programs, enter another program number. To exit the user program mode, press the light ( \%) key.

## [9] TROUBLE CODE LIST

## 1. Trouble code list

| Trouble code |  | Trouble content |
| :---: | :---: | :---: |
| E1 | 00 | E-Sort board communication trouble |
|  | 10 | E-Sort board trouble |
|  | 11 | E-Sort ASIC error |
|  | 12 | E-Sort CODEC error |
|  | 13 | E-Sort flash ROM error |
|  | 14 | E-Sort RAM error |
|  | 15 | E-Sort page memory error |
|  | 16 | E-Sort SIMM error |
|  | 17 | Rotation RAM error |
|  | 80 | E-Sort board communication trouble (Protocol) |
|  | 81 | E-Sort board communication trouble (Parity) |
|  | 82 | E-Sort board communication trouble (Overrun) |
|  | 84 | E-Sort board communication trouble (Framing) |
|  | 88 | E-Sort board communication trouble (Time-out) |
| E7 | 03 | LSU trouble |
|  | 04 | CCD white level trouble |
|  | 05 | CCD black level trouble |
| F5 | 02 | Copy lamp error |
| F6 | 00 | FAX board communication trouble |
|  | 10 | FAX board trouble |
|  | 80 | FAX board communication trouble (Protocol) |
|  | 81 | FAX board communication trouble (Parity) |
|  | 82 | FAX board communication trouble (Overrun) |
|  | 84 | FAX board communication trouble (Framing) |
|  | 88 | FAX board communication trouble (Time-out) |
| F9 | 00 | Printer PWB communication trouble |
|  | 10 | Printer PWB trouble |
|  | 80 | Printer PWB communication trouble (Protocol) |
|  | 81 | Printer PWB communication trouble (Parity) |
|  | 82 | Printer PWB communication trouble (Overrun) |
|  | 84 | Printer PWB communication trouble (Framing) |
|  | 88 | Printer PWB communication trouble (Time-out) |
| H2 | 00 | Thermistor open detection |
| H3 | 00 | Heat roller abnormally high temperature |
| H4 | 00 | Heat roller abnormally low temperature |
| L1 | 00 | Mirror base feed trouble |
| L3 | 00 | Mirror base return trouble |
| L4 | 01 | Main motor lock |
|  | 10 | Job separator motor abnormality |
| L6 | 10 | Polygon motor lock |
| L8 | 01 | Zero cross pulse (FW) trouble |
| U2 | 04 | EEPROM serial communication error |
|  | 11 | Counter check sum error |
|  | 12 | Adjustment value check sum error (EEPROM) |
| U3 | 29 | Mirror base home position error |

| U9 | 00 | Operation control PWB communication trouble |
| :---: | :---: | :--- |
|  | 80 | Operation control PWB communication trouble <br> (Protocol) |
|  | 81 | Operation control PWB communication trouble <br> (Parity) |
|  | 82 | Operation control PWB communication trouble <br> (Overrun) |
|  | 88 | Operation control PWB communication trouble <br> (Framing) |
| Uperation control PWB communication trouble (Time- |  |  |
| out) |  |  |

## 2. Details of trouble codes

| Main code | $\begin{gathered} \text { Sub } \\ \text { code } \end{gathered}$ |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| E1 | 00 | Content | E9-*** Communication trouble between MCU and E-Sort. |
|  |  | Detail | Communication setup error, framing, parity, protocol error |
|  |  | Cause | E-Sort PWB connector disconnection <br> E-Sort PWB MCU PWB harness failure <br> E-Sort Motherboard connector pin breakage. <br> E-Sort PWB ROM defect, data failure |
|  |  | Check and remedy | Check the connectors and harness of the E-Sort PWB and the MCU PWB. <br> Check grounding of the machine. Check the ROM of the E-Sort PWB. |
|  | 10 | Content | E-Sort PWB trouble |
|  |  | Detail | Communication trouble between MCU and E-Sort |
|  |  | Cause | E-Sort PWB connector disconnection <br> E-Sort PWB MCU PWB harness failure <br> E-Sort Motherboard connector pin breakage. <br> E-Sort PWB ROM defect, data failure |
|  |  | Check and remedy | Check the connectors and harness of the E-Sort PWB and the MCU PWB. <br> Check grounding of the machine. Check the ROM of the E-Sort PWB. |
| E11 | 11 | Content | E-Sort PWB ASIC error |
|  |  | Detail | E-Sort PWB ASIC abnormality |
|  |  | Cause | An ASIC abnormality is detected in the E-Sort PWB. <br> Control circuit hung up due to noises <br> ASIC peripheral circuit error |

| Main code | Sub code |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| E11 | 11 | Check and remedy | Replace the E-Sort PWB. Check grounding of the machine. |
|  | 12 | Content | E-Sort PWB CODEC error |
|  |  | Detail | E-Sort PWB CODEC error |
|  |  | Cause | A CODEC error is detected in the E-Sort PWB. <br> Control circuit hung up due to noises CODEC peripheral circuit error |
|  |  | Check and remedy | Replace the E-Sort PWB. Check grounding of the machine. |
|  | 13 | Content | E-Sort PWB Flash ROM error |
|  |  | Detail | E-Sort PWB Flash ROM abnormality |
|  |  | Cause | A Flash ROM abnormality is detected in the E-Sort PWB. Control circuit hung up due to noises <br> Flash ROM peripheral circuit error |
|  |  | Check and remedy | Replace the E-Sort PWB. <br> Rewrite the flash ROM data. <br> Check grounding of the machine. |
|  | 14 | Content | E-Sort PWB Work RAM error |
|  |  | Detail | E-Sort PWB Work RAM abnormality |
|  |  | Cause | A Work RAM abnormality is detected in the E-Sort PWB. Control circuit hung up due to noises RAM peripheral circuit error |
|  |  | Check and remedy | Replace the E-Sort PWB. Check grounding of the machine. |
|  | 15 | Content | E-Sort PWB Page Memory error |
|  |  | Detail | E-Sort PWB Page Memory abnormality |
|  |  | Cause | A Page Memory abnormality is detected in the E-Sort PWB. Control circuit hung up due to noises <br> Page Memory peripheral circuit error |
|  |  | Check and remedy | Replace the E-Sort PWB. Check grounding of the machine. |
|  | 16 | Content | E-Sort PWB SIMM error |
|  |  | Detail | E-Sort PWB SIMM abnormality |
|  |  | Cause | A SIMM abnormality is detected in the E-Sort PWB. <br> Control circuit hung up due to noises <br> SIMM peripheral circuit error |
|  |  | Check and remedy | Replace the E-Sort PWB. <br> Replace the SIMM. <br> Check grounding of the machine. |
|  | 17 | Content | E-Sort PWB image rotating RAM error |
|  |  | Detail | E-Sort PWB image rotating RAM abnormality |

| Main code | Sub <br> code |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| E11 | 17 | Cause | A image rotating RAM abnormality is detected in the E-Sort PWB. Control circuit hung up due to noises Image rotating RAM peripheral circuit error |
|  |  | Check and remedy | Replace the E-Sort PWB. Check grounding of the machine. |
| E1 | 80 | Content | E-Sort PWB communication trouble (protocol) |
|  |  | Detail | Communication trouble between MCU and printer PWB (Protocol error) |
|  |  | Cause | E-Sort PWB connector disconnection <br> E-Sort PWB MCU PWB harness failure <br> E-Sort Motherboard connector pin breakage. <br> E-Sort PWB ROM defect, data failure |
|  |  | Check and remedy | Check the connectors and harness of the E-Sort PWB and the MCU PWB. <br> Check grounding of the machine. Check the ROM of the E-Sort PWB. |
|  | 81 | Content | E-Sort PWB communication trouble (Parity) |
|  |  | Detail | Communication trouble between MCU and printer E-Sort (Parity error) |
|  |  | Cause | E-Sort PWB connector disconnection <br> E-Sort PWB MCU PWB harness failure <br> E-Sort Motherboard connector pin breakage. <br> E-Sort PWB ROM defect, data failure |
|  |  | Check and remedy | Check the connectors and harness of the E-Sort PWB and the MCU PWB. <br> Check grounding of the machine. Check the ROM of the E-Sort PWB. |
|  | 82 | Content | E-Sort PWB communication trouble (Overrun) |
|  |  | Detail | Communication trouble between MCU and E-Sort PWB (Overrun error) |
|  |  | Cause | E-Sort PWB connector disconnection <br> E-Sort PWB MCU PWB harness failure <br> E-Sort Motherboard connector pin breakage. <br> E-Sort PWB ROM defect, data failure |

| Main code | Sub <br> code |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| E1 | 82 | Check and remedy | Check the connectors and harness of the E-Sort PWB and the MCU PWB. <br> Check grounding of the machine. Check the ROM of the E-Sort PWB. |
|  | 84 | Content | E-Sort PWB communication trouble (Framing) |
|  |  | Detail | Communication trouble between MCU and E-Sort PWB (Framing error) |
|  |  | Cause | E-Sort PWB connector disconnection <br> E-Sort PWB MCU PWB harness failure <br> E-Sort Motherboard connector pin breakage. <br> E-Sort PWB ROM defect, data failure |
|  |  | Check and remedy | Check the connectors and harness of the E-Sort PWB and the MCU PWB. <br> Check grounding of the machine. Check the ROM of the E-Sort PWB. |
|  | 88 | Content | E-Sort PWB communication trouble (Time-out) |
|  |  | Detail | Communication trouble between MCU and E-Sort PWB (Time-out error) |
|  |  | Cause | E-Sort PWB connector disconnection <br> E-Sort PWB MCU PWB harness failure <br> E-Sort Motherboard connector pin breakage. <br> E-Sort PWB ROM defect, data failure |
|  |  | Check and remedy | Check the connectors and harness of the E-Sort PWB and the MCU PWB. <br> Check grounding of the machine. Check the ROM of the E-Sort PWB. |
| E7 | 03 | Content | LSU trouble |
|  |  | Detail | After the polygon motor becomes active, BD signal (HSYNC) from the LSU is not detected at the specified times ( $41 \pm 10$ times within 20 msec ). |
|  |  | Cause | LSU connector disconnection or LSU's inside harness disconnection or breakage Polygon motor rotation abnormality Improper positioning of the laser home position sensor in the LSU. Laser power voltage failure Laser emitting diode abnormality MCU PWB abnormality |

| Main code | $\begin{gathered} \text { Sub } \\ \text { code } \end{gathered}$ |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| E7 | 03 | Check and remedy | Improper connection of the LSU connector <br> Check the polygon motor <br> operation with SIM 25-10. <br> Check printing with SIM64-1. <br> Check laser emission of laser emitting diode. <br> Check the LSU unit. <br> Check the MCU PWB. |
|  | 04 | Content | CCD white level trouble |
|  |  | Detail | CCD white reference level which is read during the copy lamp lighting is abnormal. |
|  |  | Cause | Flat cable installation failure to CCD unit <br> Dirt on the mirror, lens, and reference white plate Copy lamp lighting failure CCD unit installation failure CCD unit abnormality MCU PWB abnormality |
|  |  | Check and remedy | Clean the mirror, the lens, and the reference white plate. <br> Check the copy lamp (SIM 5-3) ON. <br> CCD unit check <br> MCU PWB check |
|  | 05 | Content | CCD black level trouble |
|  |  | Detail | CCD black level which is read while the copy lamp is off is abnormal. |
|  |  | Cause | Flat cable installation failure CCD unit abnormality MCU PWB abnormality |
|  |  | Check and remedy | Check flat cable installation to the CCD unit. <br> CCD unit check <br> MCU PWB check |
| H2 | 00 | Content | Thermistor open detection |
|  |  | Detail | Fusing thermistor open |
|  |  | Cause | Thermistor defect <br> MCU PWB defect <br> Fusing section connector contact failure <br> Power failure <br> Fusing unit not installed |
|  |  | Check and remedy | Check the harness and the connector of the thermistor and the MCU. <br> Clear the self diag display with SIM 14. |
| H3 | 00 | Content | Heat roller abnormally high temperature |
|  |  | Detail | Fusing temperature of 220 ~ $240^{\circ} \mathrm{C}$. |
|  |  | Cause | Thermistor defect <br> MCU PWB defect <br> Fusing connector connection failure Power failure |

AR-205

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| H3 | 00 | Check and remedy | Check the heater lamp blinking with SIM 5-2. |
|  |  |  | When the lamp blinks normally: Check the thermistor and the harness. Check the MCU PWB thermistor input circuit. |
|  |  |  | When the lamp lights up instead of blinking: <br> Check the lamp control circuit of the power PWB and the MCU PWB. |
|  |  |  | Clear the trouble with SIM 14. |
| H4 | 00 | Content | Heat roller abnormally low temperature |
|  |  | Detail | When the temperature does not reach $155^{\circ} \mathrm{C}$ within 55 sec after turning on the power, or when it falls under $145^{\circ} \mathrm{C}$ during printing, or when it falls under $100^{\circ} \mathrm{C}$ during pre-heating. |
|  |  | Cause | Thermistor failure Heater lamp failure MCU PWB failure Thermostat failure Power failure Interlock switch failure |
|  |  | Check and remedy | Check blinking of the heater lamp with SIM 5-2. |
|  |  |  | When the lamp blinks normally: Check the thermistor and the harness. <br> Check the MCU PWB thermistor input circuit. |
|  |  | Check and remedy | When the lamp does not light: Check for heater lamp disconnection or thermostat disconnection. <br> Check the interlock switch. Check the power PWB and MCU PWB lamp control circuit. |
|  |  |  | Clear the trouble with SIM 14. |
| L1 | 00 | Content | Mirror base feed trouble |
|  |  | Detail | The mirror home position (MHPS) does not turn off though the feed operation is completed during mirror initial operation after turning on the power. <br> The mirror home position (MHPS) does not turn off during shading operation. <br> The mirror home position (MHPS) does not turn on when the mirror base is returned for the specified time after copy feed is started and SPF scanning position shift is performed. |
|  |  | Cause | Mirror unit defect <br> Mirror home position sensor defect <br> MCU PWB defect <br> Scanner wire disconnection |
|  |  | Check and remedy | Check the scanning operation with SIM 1-1. |

| Main code | Sub code |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| L3 | 00 | Content | Mirror base return trouble |
|  |  | Detail | The mirror home position (MHPS) does not turn on though the mirror base returning is completed during mirror initial operation after turning on the power. <br> The mirror home position does not turn on when the mirror is returned to the home position during shading. <br> The mirror home position (MHPS) does not turn on when the mirror base returning is completed for the specified time (about 6 sec ) after copy return start. |
|  |  | Cause | Mirror unit <br> Mirror home position sensor defect MCU PWB defect <br> Scanner wire disconnection |
|  |  | Check and remedy | Check the scanning operation with SIM 1-1. |
| L4 | 01 | Content | Main motor lock |
|  |  | Detail | The main motor encoder pulse is not detected for 400 msec . |
|  |  | Cause | Main motor defect Harness disconnection between the MCU PWB and the main motor. <br> Control circuit failure |
|  |  | Check and remedy | Check the main motor operation with SIM 25-1. <br> Check the harness and the connector between the MCU PWB and the main motor. |
| L6 | 10 | Content | Polygon motor lock |
|  |  | Detail | The lock signal (the specified rotation speed signal) is not supplied within the specified time (about 6 sec )after starting the polygon motor rotation. |
|  |  | Cause | LSU connector disconnection or harness disconnection in the LSU. |
|  |  | Check and remedy | Check the operation of the polygon motor with SIM 25-10. Check the harness and the connector connection. LSU replacement |
| L8 | 01 | Content | Zero cross pulse (FW) trouble |
|  |  | Detail | Zero cross pulse width is shifted by $55 \mathrm{~Hz} \pm 10 \%$ or more. |
|  |  | Cause | MCU PWB defect <br> Power unit breakdown |
|  |  | Check and remedy | Check the harness and the connector. <br> MCU PWB replacement <br> Power unit replacement |
| U2 | 04 | Content | EEPROM serial communication error |
|  |  | Detail | Error in communication with EEPROM |

| Main code | Sub <br> code |  | Detail of trouble |
| :---: | :---: | :---: | :---: |
| U2 | 04 | Cause | EEPROM failure Installation of uninitialized EEPROM MCU PWB EERPOM access circuit failure |
|  |  | Check and remedy | Check that the EEPROM is properly set. <br> To prevent against loss of counter/adjustment values, record the values with simulation. U2 trouble cancel with SIM 16 MCU PWB replacement |
|  | 11 | Content | Counter check sum error |
|  |  | Detail | Counter check sum value stored in the EEPROM is abnormal. |

*1: Recommendable replacement time: 30K (A4 (8.5" $\times 11$ "), $6 \%$ print)

## [11] DISASSEMBLY AND ASSEMBLY

WARNING: Before performing the disassembly procedure, be sure to remove the power cord to prevent against an electric shock.

| No. | Item | Page |
| :---: | :--- | :--- |
| 1 | High voltage section/Duplex transport section | $12-1$ |
| 2 | Optical section | $12-1$ |
| 3 | Fusing section | $12-2$ |
| 4 | Paper exit section | $12-4$ |
| 5 | MCU | $12-6$ |
| 6 | Optical frame unit | $12-6$ |
| 7 | LSU | $12-6$ |
| 8 | Tray paper feed section/Paper transport section | $12-7$ |
| 9 | Manual multi paper feed section | $12-8$ |
| 10 | Power section | $12-10$ |
| 11 | Developing section | $12-11$ |
| 12 | Process section | $12-12$ |

## 1. High voltage section/Duplex transport section

| No. | Content |
| :---: | :--- |
| A | Transfer charger unit |
| B | Charger wire |
| C | Duplex transport section <Only AR-205> |

## A. Transfer charger unit

## B. Charger wire

Installation: The spring tip must be between two reference ribs.

- The charger wire must be free from twist or bending.
- Be sure to put the charger wire in the V groove.

C. Duplex transport section <Only AR-205>

## 2. Optical section

| No. | Content |  |
| :---: | :--- | :--- |
| A | Table glass |  |
| B | Copy lamp unit |  |
| C | Copy lamp |  |
| D | Lens unit |  |

## A. Table glass

## B. Copy lamp unit

Disassembly: Be sure to put No. 2/3 mirror unit to the positioning plate (A).
Assembly: Put the notched surface of wire holder (3) downward, tighten temporarily, and install.
Adjustment: Main scanning direction distortion balance adjustment

## C. Copy lamp

## D. Lens unit

## Lens unit attachment reference

Attach the lens unit so that the lens unit number on the lens adjustment plate is aligned with the scribe line on the base plate.

Example: Lens unit number -2.8
Attach the lens unit at 2 scales in the paper exit direction from the reference line.
Note: Never touch the other screws than the unit attachment screw.
The lens unit is supplied only in a whole unit.

## 3. Fusing section

| No. | Contents |
| :---: | :--- |
| A | Fusing unit |
| B | Thermostat |
| C | Thermistor |
| D | Heater lamp |
| E | Upper heat roller |
| F | Separation pawl |
| G | Lower heat roller |

A. Fusing unit removal

B. Thermostat

## C. Thermistor

Installation: Check that the thermistor is in contact with the upper heat roller.

D. Heater lamp

Assembly: Insert the spring $(A)$ into the hole $(B)$ in the fusing frame.

Assembly: Put the paper guide earth spring (A) under the paper guide (B) before fusing.

Disassembly: There are three pawls on the fusing cover. Remove the screws and slide the fusing cover to the right to remove.
The heater lamp is fixed on the fusing cover with a screw. Slide the fusing cover to the front and remove the screw, then remove the heater lamp.

Assembly:
Put the fusing harness (A) on the heater lamp (B) as shown in the figure and fix them together. Place the fusing harness inside the rib (C).

## E. Upper heat roller

F. Separation pawl

## G. Lower heat roller

Assembly: When installing the paper guide (3) before fusing, tighten the paper guide fixing plate so that the paper guide fixing plate (2) is in contact with the frame bottom section (A) under fusing.

## 4. Paper exit section

| No. | Content |
| :---: | :--- |
| A | Front cabinet unit/Right cabinet unit |
| B | Ozone filter |
| C | Paper exit unit |
| D | Transport roller |
| E | Paper exit roller |

A. Front cabinet unit, right cabinet disassembly

B. Ozone filter

C. Paper exit unit

D. Transport roller

E. Paper exit roller

Assembly: Insert the spring pin so that the waveform (A) of the spring pin faces in the longitudinal direction of the paper exit drive gear long hole (B).
Be sure to insert two ribs (C) into the groove (D).

5. MCU

| No. |  | Content |
| :---: | :--- | :--- |
| A | MCU |  |

## A. MCU disassembly

Note: When replacing the MCU PWB, be sure to replace the EEPROM of the MCU PWB to be replaced.

## 6. Optical frame unit

| No. |  | Content |
| :---: | :--- | :--- |
| A | Optical frame unit |  |

A. Optical frame unit

Installation: Install the optical unit in the sequence shown above.

## 7. LSU

| No. |  | Content |
| :---: | :---: | :---: |
| A | LSU unit |  |

A. LSU unit

(6)

Adjustment: • Image lead edge position adjustment

- Image left edge position adjustment
- Paper off-center adjustment

## 8. Tray paper feed section/Paper transport section

| No. | Content |
| :---: | :--- |
| A | Interface frame unit |
| B | Drive unit |
| C | Solenoid (paper feed solenoid, resist roller solenoid) |
| D | Resist roller clutch, Resist roller |
| E | Paper feed clutch/Paper feed roller (Semi-circular roller) |

## A. Intermittent frame unit

## Assembly: Do not miss the door lock pawl.

## B. Drive unit

Assembly: Move down the clutch pawl as shown below, and avoid the clutch and install.
(1)

## C. Solenoid (paper feed solenoid, resist roller solenoid)

D. Resist roller clutch/Resist roller

E. Paper feed clutch/Paper feed roller (Semi-circular roller)

9. Manual multi paper feed section

| No. | Content |
| :---: | :--- |
| A | Manual multi paper feed section |
| B | Manual transport clutch |
| C | Manual paper feed clutch |
| D | Manual transport roller/Manual paper feed roller |
| E | Multi feed solenoid |

A. Manual multi paper feed

B. Manual transport clutch

## C. Manual paper feed clutch

Disassembly: Set up the shutter arm (1) then remove it.
Assembly: Install so that the boss section of the fulcrum arm (2) comes between ribs.

Disassembly: Set up the cam transmission arm (2), and remove it. Assembly: Install so that the cam transmission arm (2) is under the roller arm (A).

D. Manual transport roller/Manual paper feed roller

Installation: Be careful of the installing direction of the manual transport roller (4).

## E. Multi feed solenoid

Assembly: Install so that the latches (A) and (B) move smoothly.

10. Power section

| No. |  | Content |
| :---: | :--- | :--- |
| A | Power unit |  |

A. Power unit

11. Developing section

| No. | Contents |
| :---: | :--- |
| A | Waste toner box |
| B | Developing box |
| C | Developing doctor |
| D | MG roller |

A. Waste toner box

B. Developing box

C. Developing doctor

Adjustment: Developing doctor gap adjustment
D. MG roller

(1)

Adjustment: MG roller main pole position adjustment
12. Process section

| No. | Contents |  |
| :---: | :--- | :--- |
| A | Drum unit |  |
| B | MC holder unit |  |
| C | Cleaning blade |  |

## A. Drum unit

Assembly: When installing the drum cover (1), be sure to engage the transport screw gear (A) rib and the detection gear (B).

B. MC holder unit
(2)
(1) $\longrightarrow$

C. Cleaning blade

## [12] FLASH ROM VERSION UP PROCEDURE

## 1. MCU/E-SORT

A. Tool

- Machine
- PC

Operates on Windows 95/98.

- Level converter (UKOG-0002QSZZ) (with serial cable)
- Level converter (UKOG-0003QSZZ) (without serial cable)
- (Serial cable)

## B. Procedures

1) Connect the PC and the level converter, and start Windows.
2) Turn off the power of the machine.
3) Remove the cap at the rear of the machine.

4) Connect the serial connector.

5) Turn on the power of the machine.

- The machine enters the download mode. (All LED lamps are turned off. The machine accepts no key operations.)

6) Execute "mainte-Vxxx.exe" on the PC.

mainte_v 104

[^1]7) Communication port/communication speed setting

- Select "Comport" in the option menu, and select the most suitable item with consideration of PC environment, work time, etc.

8) Select "Download the Program Data" in the SPECIAL folder, and transfer data.

9) Select the data for MCU to be transferred.

Connecting

## पाताताI

10) Select the data for the electronic sort board to be transferred.

* When the electronic sort board is not installed, this procedure is automatically canceled. Go to procedure 11).

## Connecting

## पाताता

11) After transfer of data, turn off the machine and disconnect the connector.

Reference: If the power is turned off during the procedure or in case of a communication error, resume the procedure from 2 ).

## 2. PRINTER CONTROL PWB FIRMWARE VERSION UP <With an option installed>

## A. Cases where flash memory rewriting is required

In the following cases, the program in the printer control PWB flash memory must be rewritten.

1) When a bug or other error is found
2) Data stored in the flash memory is destroyed or deleted.
3) When the flash memory is replaced.

## B. Necessary tools

1) Computer (PC) <Operates on MS-DOS.>
2) Parallel cable
3) Program data file (xxx.BIN)

## C. Procedure

1) Print the configuration list to check the firmware version. Use the operation panel of the copier to perform the following procedure.
ONLINE <off line> $\rightarrow$ MENU <Test Printing Menu> $\rightarrow$ ITEM <Configuration Page> $\rightarrow$ ENTER <The test page prints>
2) Connect the PC and the copier with the parallel cable.
3) Turn on the power
4) Execute SIM 67-14.
"Erase Flash Data?" is displayed on the LCD.
5) Press the ENTER key on the copier's operation panel. "Now Erasing" is displayed on the LCD.
6) After deletion of data, "Please Send Data" is displayed on the LCD and the machine enters the ready state for data input.
7) Download the program file.
(Note) Never turn off the power during download.
Set the PC to DOS mode $\rightarrow$ Check that the display shows READY. $\rightarrow$ Then type COPY $\smile / \mathrm{B}_{\sqcup \mathrm{xxx}}$ BIN LPT1: and press the enter key.
( $\sqcup$ : space)
8) The machine enters the data reception mode. While "Writing" is displayed on the LCD, data are written into the flash ROM.
9) When data reception and data writing into the flash ROM are completed, the SUM check is automatically performed.
(Note) In case of an error, "Sum check Error" is displayed. Turn off the power once, and repeat the procedures from 3 ).
10) If there is no problem on the result of the SUM check, "Complete" is displayed on the LCD.
11) Turn off/on the power to print the configuration page with the above procedures, and check the firmware version.
12) Perform printing on the PC side and check that printing is performed normally.
