KIMCHI REFRIGERATOR **SERVICE MANUAL**

CAUTION

PLEASE READ CAREFULLY THE SAFETY PRECAUTIONS OF THIS MANUAL
BEFORE CHECKING OR OPERATING THE REFRIGERATOR.

MODEL : GR-J303T*

SAFETY INSTRUCTIONS

1. Firstly check that there is electrical leakage in the main body of the product.
2. Perform work always after removing the power plugs in handling with the part where electricity conducts through.
3. Wear a rubber gloves(insulation gloves) for preventing electrical shock accident in case of testing with power on.
4. Always check rated current, voltage and capacity in using the instruments.
5. Exercise care so that water does not enter into electrical parts around the machine room.
6. Take care so that things should not fall down by removing them cleanly on the product when leaning the product forward or backward. Especially, take care of thin things (glass panels, books).
7. Ensure to consult the repair and maintenance center shop when the cold storage cycle is damaged (to prevent that gas inside of the cycle gets a room dirty).

3. MICOM FUNCTION AND EXPLANATIONS OF CIRCUITS

3-1. EXPLANATION OF FUNCTION

3-1-1. DISPLAY PART

(1) BEST MODEL(GR-J303TG)

(2) BETTER MODEL(GR-J303TS)

NOTCH	Cabbage/Radish/Mul Kimchi			Vegetable/ Fruit			Light Freezing			Frozen Food				Chilled Food		
	Min	Mid	Max	Min	Mid	Max	Min	Mid	Max	Min	Mid	Max	Max	Min	Mid	Max
Temperature setting	1.0°C	-0.5°C	-2.0°C	4.5°C	3.5°C	2.5°C	-4.0°C	-5.0°C	-6.0°C	-15°C	-18°C	-21°C	-25°C	5.0°C	2.0°C	0.0°C

1. MICOM becomes "Lock" status in initial application of power, and the upper room is indicated as "Freezing Food." "Mid", the middle room as "Cabbage" "Mid", and the lower room as "Cabbage" "Mid".
2. MICOM maintains the previous display status in power failure and re-application of power. But in case of a power-shut or power reconnection during rhythm fermenting, the temperature returns to "Mid" for the applicable food type.
3. Buzzer sound neither ring ever pressing the button in "Lock" status, nor performs function.

3-1-2. Food storage/seasoning function

(1) When selecting food type and storage temperature

1. Press the "Lock/Unlock" button for more than 2 seconds to "Unlock" the refrigerator.
2. When you press the "Upper compartment", "Store" button in this condition, the storage temperature level changes from "Mid" → "Max" → "Min" → "Mid", and the food type changes as follows when the storage temperature level changes from "Min" → "Mid". ("Freeze" → "Refrigerate" → "Kimchi")
3. When you press the "Middle compartment", "Storage" button, the storage temperature level changes from "Mid" → "Max" → "Min" → "Mid", and the food type changes as follows when the storage temperature level changes from "Min" → "Mid". ("Cabbage Kimchi" → "Old Kimchi" → "Light freezing" → "Vegetable/fruit")
4. When you press the "Lower compartment", "Storage" button, the storage temperature level changes from "Mid" → "Max" → "Min" → "Mid", and the food type changes as follows when the storage temperature level changes from "Min" → "Mid". ("Cabbage Kimchi" → "Old Kimchi" → "Broth Kimchi" → "Vegetable/fruit")
5. Press the "Lock/Unlock" button to end the food storage and storage temperature selection. At this time, if no button is selected for 1 minute without the "Lock/Unlock" button pressed, the unit will automatically switch to the Lock condition and end the selection.

(2) When selecting food type and rhythm fermenting (seasoning)

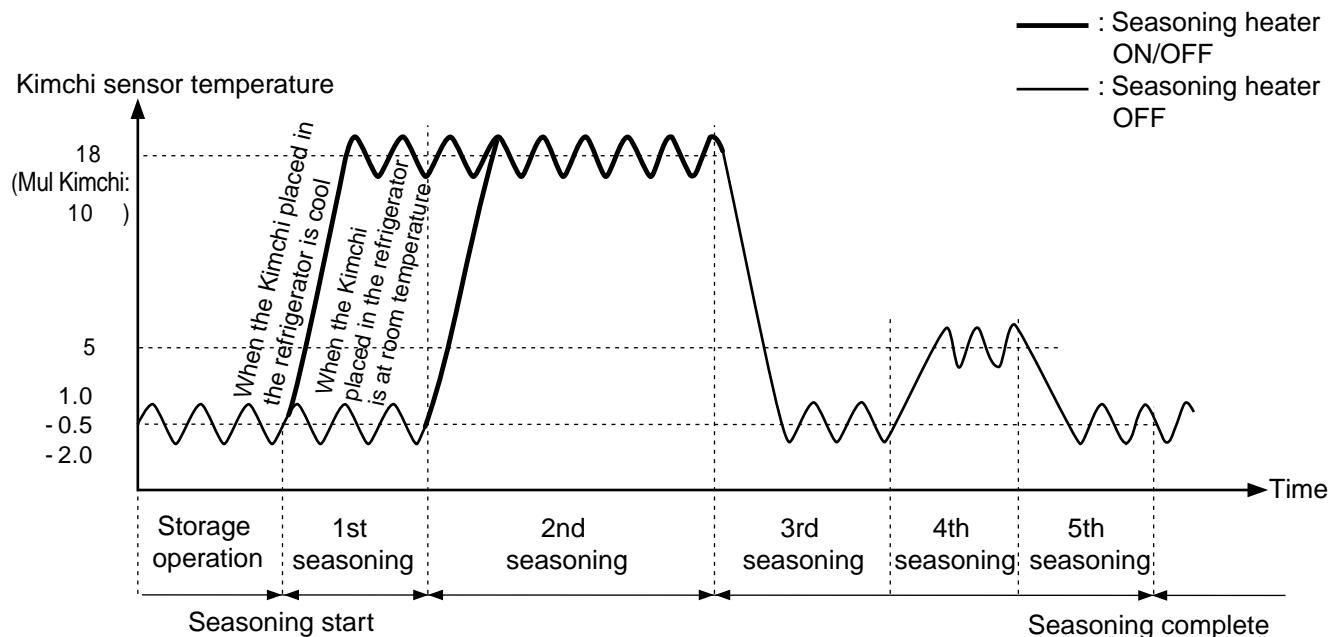

1. Press the "Lock/Unlock" button for more than 2 seconds to "Unlock" the refrigerator.
2. When you press the "Ferment" button at this condition, the rhythm fermenting (seasoning) changes from "Fermented 1 (■)" → "Fermented 2 (■)" → "More fermented (■)" → "Underground fermented (■)" → "Less fermented 1 (■)" → "Less fermented 2 (■)", and the food type changes from Middle compartment: "Cabbage Kimchi" → "Old Kimchi" → "Cabbage Kimchi", Lower compartment: "Cabbage Kimchi" → "Radish Kimchi" → "Broth Kimchi" → "Cabbage Kimchi" when the Rhythm Ferment (Seasoning) changes to "Less fermented 2" or "Fermented 1". (But, the upper compartment only has the underground fermenting function.)
3. When you press the Ferment button when the food type is "Vegetable/fruit", "Light freezing", it is set to "Cabbage Kimchi – Fermented 1".
4. Press the "Lock/Unlock" button to end the food storage and storage temperature selection. At this time, if no button is selected for 1 minute without the "Lock/Unlock" button pressed, the unit will automatically switch to the Lock condition and end the selection.

(3) When selecting Flavor Keeping

1. Press the "Lock/Unlock" button for more than 2 seconds to "Unlock" the refrigerator.
2. The Flavor Keeping function can only be selected when the food type of "Cabbage Kimchi", "Old Kimchi", "Radish Kimchi" or "Broth Kimchi" is selected.
3. When you press the "Flavor Keeping" button at this condition, the Flavor Keeping function will toggle between selected and canceled. (But if both the middle compartment and the lower compartment has food type that can use Flavor Keeping, operate in the order of Middle compartment Flavor Keeping ON → Lower compartment Flavor Keeping ON → Middle/Lower compartment Flavor Keeping ON → Middle/Lower compartment Flavor Keeping OFF → Middle compartment Flavor Keeping ON).
4. Press the "Lock/Unlock" button to end the Flavor Keeping. At this time, if no button is selected for 1 minute without the "Lock/Unlock" button pressed, the unit will automatically switch to the Lock condition and end the Flavor Keeping.
5. When you select the Flavor Keeping during the fermenting process, the fermenting will immediately end and the Flavor Keeping function will start. AT this time, the storage temperature is automatically set to "Mid".
6. When you select the Flavor Keeping, it controls at lower temperature to keep the current taste of Kimchi longer. (-1 deg for "Min", -0.5deg for "Mid" and 0 deg for "Max").
7. During the Flavor Keeping operation, the unit runs a cold shock operation every 12 hours.
8. When you select the rhythm fermenting while executing the Flavor Keeping, the Flavor Keeping function will be canceled.

3-1-3. Rhythm fermenting control pattern diagram

1. The fermenting control pattern varies, depending on the temperature of the Kimchi when it is placed into the storage, the type of Kimchi being made and the degree of the seasoning selected.
2. In the 1st seasoning cycle, if the Kimchi is at room temperature, the cold control operates.
3. During the seasoning cycle, if the Kimchi is cold, the seasoning heater is turned on and if the Kimchi is warm, the seasoning heater is turned off.
4. If a failure occurs, such as a sensor error during seasoning, the storage will default to Cabbage Kimchi storage status.
5. The 2nd seasoning is not included in the underground fermenting, in the 3rd seasoning, Perform the Low temperature mature keeping the Temperature is 3°C

3-1-4. TEMPERATURE CONTROL AT UPPER, MIDDLE AND LOWER COMPARTMENT

(1) Temperature control at upper compartment

1. Turn COMP, upper compartment fan motor depending on temperature of the upper compartment sensor and cool them by opening the 3-way valve to the upper compartment.
2. However, cooling of the upper compartment starts after cooling of the Middle/lower compartment is completed while the middle/lower compartment is cooling (Max 25 min).

(2) Temperature control at middle/lower compartment

1. Turn COMP, middle compartment fan motor depending on temperature of the middle/lower compartment sensor and cool them by opening the 3-way valve to the middle/lower compartment ,and opening the middle/lower damper.
2. However, cooling of the middle/lower compartment starts after cooling of the upper compartment is completed while the upper compartment is cooling (Max 35 min).

(3) Operation conditions of COMP

1. COMP turns on by the upper compartment sensor and lower compartment sensor.
2. COMP turns off by the upper compartment sensor, middle compartment sensor and lower compartment sensor.

(4) Operation conditions of 3-way valve

1. Open the upper, middle and lower compartment valve by the upper, middle or lower compartment sensor .
2. Perform operation for minimum 25 minutes (for 35 minutes at middle, lower compartment) upon request of "open" (unsatisfactory temperature) at the other side while COMP operates with the valve opened in one side, and then cutoff the valve to other side. In this case, immediately cutoff the valve if temperature is met even if 25 minutes (35 minutes for middle, lower compartment) have not passed.
3. In input of initial power, cool from the upper compartment where the upper compartment is Data Frz. (Deep Frz), Frz. when all upper/middle/lower compartment is not satisfactory, and firstly cool from the middle, lower compartment for the other case.

3-1-5. LCD BACK LIGHT CONTROL (LIMITED TO LCD MODEL)

1. To make the LCD display easy to see, the LCD back light is turned on for 1 minute for the initial power connection or for 20 seconds for the final button operation.
2. When you press any display button when the back light is turned off, the button command will not be executed nor the buzzer sound generated. Only the back light will be turned on. But only the "Lock/Unlock" button will operate normally. (When you press the button when the LCD back light is turned off, only the command to turn on the back light will be executed.)
3. When you press the "Storage" button of the upper compartment and the "Storage" button of the lower compartment simultaneously for more than 1 second, the back light will be turned on and all the graphics on the LCD will be turned on. When you release the buttons, the LCD graphics will return to the prior condition and the back light turned off. (LCD graphic and back light ON/OFF check)

3-1-6. LOCK FUNCTION (DISPLAY BUTTON LOCK/UNLOCK)

1. The "Lock" LED is turned on in the Lock status in application of refrigerator power.
2. Turn the "Unlock" LED by pressing the Lock/Unlock button for 2 seconds or more to allow operation of the display button.
3. Buzzer sound neither rings ever by pressing any button other than the Lock/Unlock button, nor performs function with the "Lock" LED turned on.
4. The "Lock" LED automatically turns on and becomes lock status unless operating the display button for more than a minute with the "Unlock" LED turned on.

3-1-7. FRONT-C HEATER CONTROL

1. A heater for prevention of dewing is installed on the FRONT-C part between the middle compartment and the lower compartment, and turns on at the time of COMP ON and for 20 minutes after COMP OFF.
2. It turns off in the test mode (turn on after power off for normal operation).

3-1-8. BUZZER RINGING

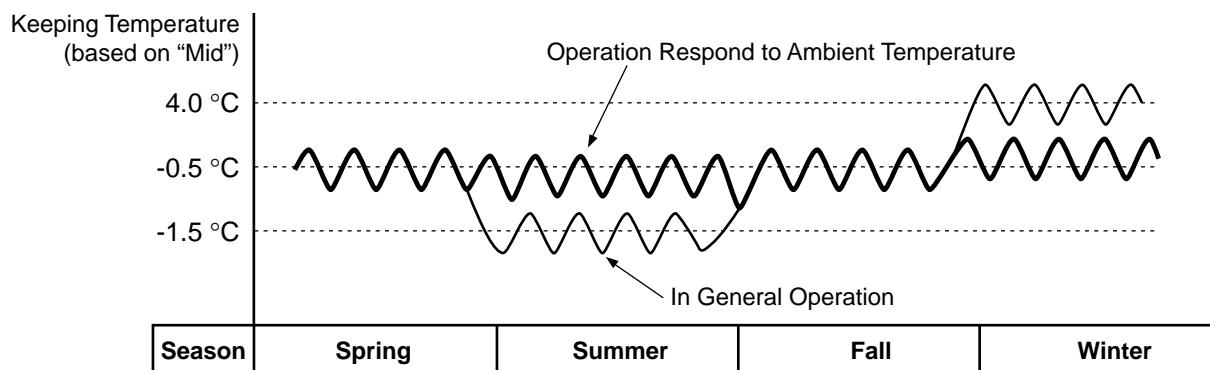

1. "Ding~Dong~" sound rings when pressing the front display button.
2. No buzzer rings if pressing the button not according to the operation order.

3-1-9. POWER FAILURE COMPENSATION FUNCTION

1. Previous operation is performs even applying power again after power failure. However, error status or test mode status is excluded.

3-1-10. OPERATION RESPOND TO AMBIENT TEMPERATURE

1. This is function of maintaining keeping temperature constantly irrespective of season by compensating for the in-refrigerator temperature through ambient temperature of the refrigerator to prevent that the in-refrigerator temperature changes according to ambient temperature (weak cold in winter, excess cold in summer).

3-1-11. DEFROSTING (REMOVAL OF FROST)

1. Defrosting is simultaneously performed by using the defrosting heater at the upper compartment and the middle compartment whenever sum of compressor operation time reaches to 6 hours.
2. Defrosting is started if sum of compressor operation time reaches to 4 hours in input of initial power (or in returning from power failure).
3. Complete defrosting function where defrosting sensor temperature of each room reaches to 7°C (16°C for GR-J213) for the upper compartment, 16°C for the middle compartment respectively, after starting defrost work.
However, poor defrost is indicated if not reaching to 7°C (16°C for GR-J213) for the upper compartment, 16°C for the middle compartment respectively 2 hours after starting defrost (See 3-1-11 Failure Diagnosis Function).
4. Poor defrost is indicated if the defrosting sensor is poor, and defrosting of the relevant room is not done.

3-1-12. SEQUENTIAL OPERATION OF ELECTRICAL PARTS

Electrical parts such as COMP, defrosting heater at the upper & middle compartment, fan motor at the upper & middle compartment, single motor damper and FRONT-C heater sequentially operate as follows for preventing noise and damage of parts occurred by that various parts operate at the same time in input of initial power on and after test closing (including temporary power failure, either):

Function	Operation Sequence	Remarks
<p>When defrosting sensor temperature at the upper compartment is more than 45°C (In purchasing, movement)</p>	<pre> graph LR A[POWER ON] -- 0.5 sec --> B[SINGLE MOTOR DAMPER ON] B -- 0.3 sec --> C[COMP ON] C -- 0.3 sec --> D[FRONT -C HEATER ON] D -- 10 sec --> E[F-FAN ON] E -- 4-5 sec --> F[SINGLE MOTOR DAMPER OFF] B -- 0.5 sec --> G[3-WAY VALVE ON] G -- 5-6 sec --> H[3-WAY VALVE OFF] B -- 0.5 sec --> I[STEPPING MOTOR DAMPER ON] I -- 3-6 sec --> J[STEPPING MOTOR DAMPER OFF] </pre>	
<p>In initial power on</p> <p>When defrosting sensor temperature at the upper compartment is less than 45°C (In power failure, service)</p>	<pre> graph TD A[POWER ON] -- 0.5 sec --> B[DEFROSTING HEATER AT UPPER COMPARTMENT ON] B -- 0.3 sec --> C[DEFROSTING HEATER AT MIDDLE COMPARTMENT ON] C -- 4 sec --> D[DEFROSTING HEATER AT UPPER COMPARTMENT OFF] D -- 0.3 sec --> E[DEFROSTING HEATER AT MIDDLE COMPARTMENT OFF] E -- 0.3 sec --> F[FRONT -C HEATER ON] F -- 4 sec --> G[FRONT -C HEATER OFF] G -- 4 sec --> H[SINGLE MOTOR DAMPER ON] H -- 0.3 sec --> I[COMP ON] I -- 0.3 sec --> J[FRONT -C HEATER ON] J -- 10 sec --> K[UPPER COMPARTMENT FAN ON] K -- 10-30 sec --> L[SINGLE MOTOR DAMPER OFF] L -- 0.5 sec --> M[3-WAY VALVE ON] M -- 5-6 sec --> N[3-WAY VALVE OFF] N -- 0.5 sec --> O[STEPPING MOTOR DAMPER ON] O -- 3-6 sec --> P[STEPPING MOTOR DAMPER OFF] </pre>	<p>No initial operation is done if error occurs during operation.</p>

3-1-13. FAILURE DIAGNOSIS FUNCTION

(1) Failure Mode

1. Failure diagnosis function is intended in order that service is easily done when failure to affect performance of the product during use occurs.
2. Function is neither done, nor buzzer sound rings even when pressing the button in occurrence of failure.
3. The product returns to normal operation if failure is released during display of failure code in occurrence of failure (RESET).
4. LEDs other than failure code turn off in occurrence of failure.

BEST MODEL
(GR-J303TG)

"Failure CODE Display"

BETTER MODEL
(GR-J303TS)

NO	Item	Failure Display (Food LED) F1 F2 F3 F4 F5	Failures	Remarks
1	Failure of upper compartment (K1) sensor	F5	Upper compartment sensor is disconnected or shorted	* Check wiring of respective relevant sensor.
2	Failure of middle compartment (K2) sensor	M5	Middle compartment sensor is disconnected or shorted	
3	Failure of lower compartment (K3) sensor	L5	Lower compartment sensor is disconnected or shorted	
4	Failure of upper compartment defrosting sensor	U1	Upper compartment defrosting sensor is disconnected or shorted	
5	Failure of middle compartment defrosting sensor	M2	Middle compartment defrosting sensor is disconnected or shorted	
6	sensor Failure of ambient temperature sensor	Note 1)	Ambient temperature sensor is disconnected or shorted	
7	Failure of single motor damper	D1P	When ON/OFF of the reed-S/W is not detected even when driving the single motor damper for 2 minutes	Damper motor damaged, frozen, coil damaged, driving IC(photo coupler) failure
8	Poor defrosting at upper compartment	H1	When defrosting sensor at the upper compartment does not reach to more than 7°C even when two hours have passed after starting defrost	Short of temperature fuse, short of heater, clogging of drain, poor heater driving relay
9	Poor defrosting at middle compartment	H2	When defrost sensor at the middle compartment does not reach to more than 16°C even when two hours have passed after starting defrost	Short of temperature fuse, short of heater, clogging of drain, poor heater driving relay
10	Poor communication	CO	When no communication is consecutively done for 30 seconds	Taking out of connector, Poor TR on communication part

Note 1) All LEDs except for failure display LED (F1, F2, F3, F4, F5) turn on if simultaneously pressing both upper "Store" button and middle "Store" button for a second where poor ambient temperature sensor exists.

(2) Load Operation in Failure

NO	ITEM	Classification								
		COMP	UPPER COMPARTMENT FAN	MIDDLE COMPARTMENT FAN	DEFROSTING HEATER OF UPPER COMPARTMENT	DEFROSTING HEATER OF MIDDLE COMPARTMENT	STEPPING MOTOR DAMPER	SINGLE MOTOR DAMPER	3-WAY VALVE	FRONT-C HEATER
1	Normal	○	○	○	○	○	○	○		
2	Failure of Upper compartment (K1) sensor	15 min ON/ 15 min OFF	○	○	○	○	○	○		
3	Failure of Middle compartment (K1) sensor	○	○	○	○	○	15 min OPEN/ 15 min CLOSE	○		
4	Failure of Upper compartment (K1) sensor	○	○	○	○	○	○	10 min OPEN/ 15 min CLOSE		
5	Failure of Upper compartment defrosting sensor	○	○	○	Don't defrost (immediately return)	○	○	○		○ (Linked with COMP. However, FRONT-C heater turns off for 15 minutes and turn on again if the heater turn on time continues for more than 40 minutes)
6	Failure of Middle compartment defrosting sensor	○	○	○	○	Don't defrost (immediately return)	○	○		
7	Failure of ambient Temperature sensor	○	○	○	○	○	(No compensation of ambient temperature)	(No compensation of ambient temperature)		
8	Poor defrosting at upper compartment	○	○	○	○	○	○	○		
9	Poor defrosting at middle compartment	○	○	○	○	○	○	○		
10	Failure of single motor damper	○	○	○	○	○	○	Perform normal initialization by checking operation in the cycle of 1 hour		
11	Poor communication	○	○	○	○	○	○	○		

3-1-14. TEST FUNCTION

1. Test function is intended to check function of PCB and the product and find a failure part with failure status.
2. The test S/W exists on the main PCB, and ends the test mode after 2 hours irrespective of the test mode, and then returns to normal status.
3. Function button is neither detected, nor button recognition sound comes out during the test mode.
4. Ensure to take the power cords out in completion of the test mode so that normal status will be arrived.
5. Release the test mode and display the failure mode if failure such as sensor failure during the test mode.
6. No test mode is performed even when pressing the test button during display of failure code.

MODE	OPERATION	DETAILS	REMARKS
TEST1	Press the test S/W once	1. COMP (* Fan motor at machine room) ON 2. Defrost heater OFF at upper, middle compartment. 3. FRONT-C heater OFF 4. Fan motor at upper/middle compartment, damper at middle/lower compartment and 3-way valve operates to cool the upper/middle&lower compartment in interval of 16/24 minute. 5. For display, the only "Min" LED of the upper room turns on.	Returns to normal status when maximum 2 hours have passed.
TEST2	Press the test S/W once in the test mode 1	1. COMP (* Fan motor at machine room) OFF 2. Fan motor OFF at upper, middle compartment 3. Defrost heater ON at upper, middle compartment 4. FRONT-C heater ON 5. All dampers at middle, lower compartment are closed. 6. 3-way valve maintains previous status. 7. For display, the only "MIN" LED of the upper room turns on.	Defrost sensor at the upper compartment performs initialization at more than 7 °C, and middle defrost sensor at more than 16 °C (COMP delay for 7 minutes)
Normal status	Press the test S/W 3 times in the test mode 2	Returns to initial status	COMP operates after delay for 7 minutes

- LED check function

All LEDs turn on if pressing both upper "Store" button and middle "Store" button at the same time for 1 second or more, and display the previous status if releasing the button.

- FRONT-C Heater touching inspection mode

The FRONT-C heater consecutively turns on for 5 minutes and is then released if pressing both upper "Store" button and lower "Ferment" button for 5 seconds or more. It is released if pressing them again for 5 seconds or more.

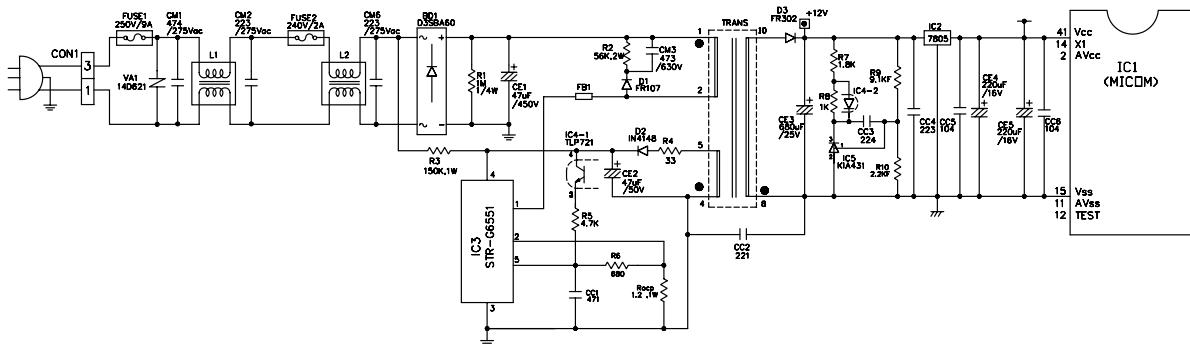

- Release check: LED on the remainder time display part of the lower compartment turns on with pressing for 5 seconds or more.

- Input check: LED on the flavor keeping part turns on with pressing for 5 seconds or more.

3-2. EXPLANATION OF CIRCUITS

3-2-1. POWER CIRCUIT

Power circuits consist of SMPS (Switching Mode Power Supply) power, and the SMPS consists of the rectification part (BD1, CE1) to convert AC voltage to DC voltage, the switching part (IC3) to switch the converted DC voltage, a transformer to transfer energy of the primary side on the switching terminal, secondary side power to supply power to the MICOM and IC and the feed back part (IC4, IC5) to feedback the secondary side voltage to the primary side of transformer in order to maintain it uniformly.

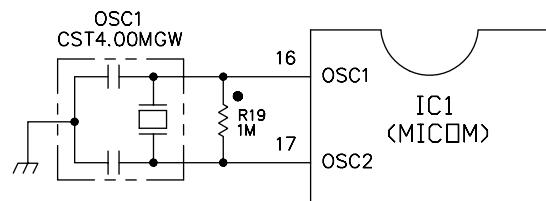

Caution.: Take a measure after more than 3 minutes have passed after removing the power cords in abnormal operation of circuits since high voltage (DC310V) is maintained at the power terminal. Otherwise, it may cause electric shock.

Part	Both ends of VA1	Both ends of CE1	Both ends of CE2	Both ends of CE3	Both ends of CE4
Voltage	220 Vac	310 Vdc	16 Vdc	12.5 Vdc	5 Vdc

Voltage of each part is as follows:

3-2-2. OSCILLATION CIRCUIT

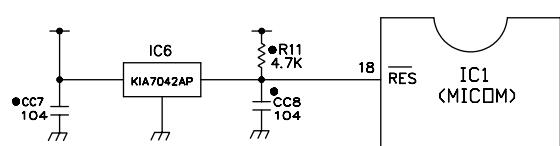

Oscillation circuits are intended to generate clock for synchronization for information transmission/receipt of logic elements inside of the IC1 (MICOM) and generate basic time for time calculation. Rated parts must be used since the OSC1 does not operate or time calculated at the IC1 changes where SPEC changes.

3-2-3. RESET CIRCUIT

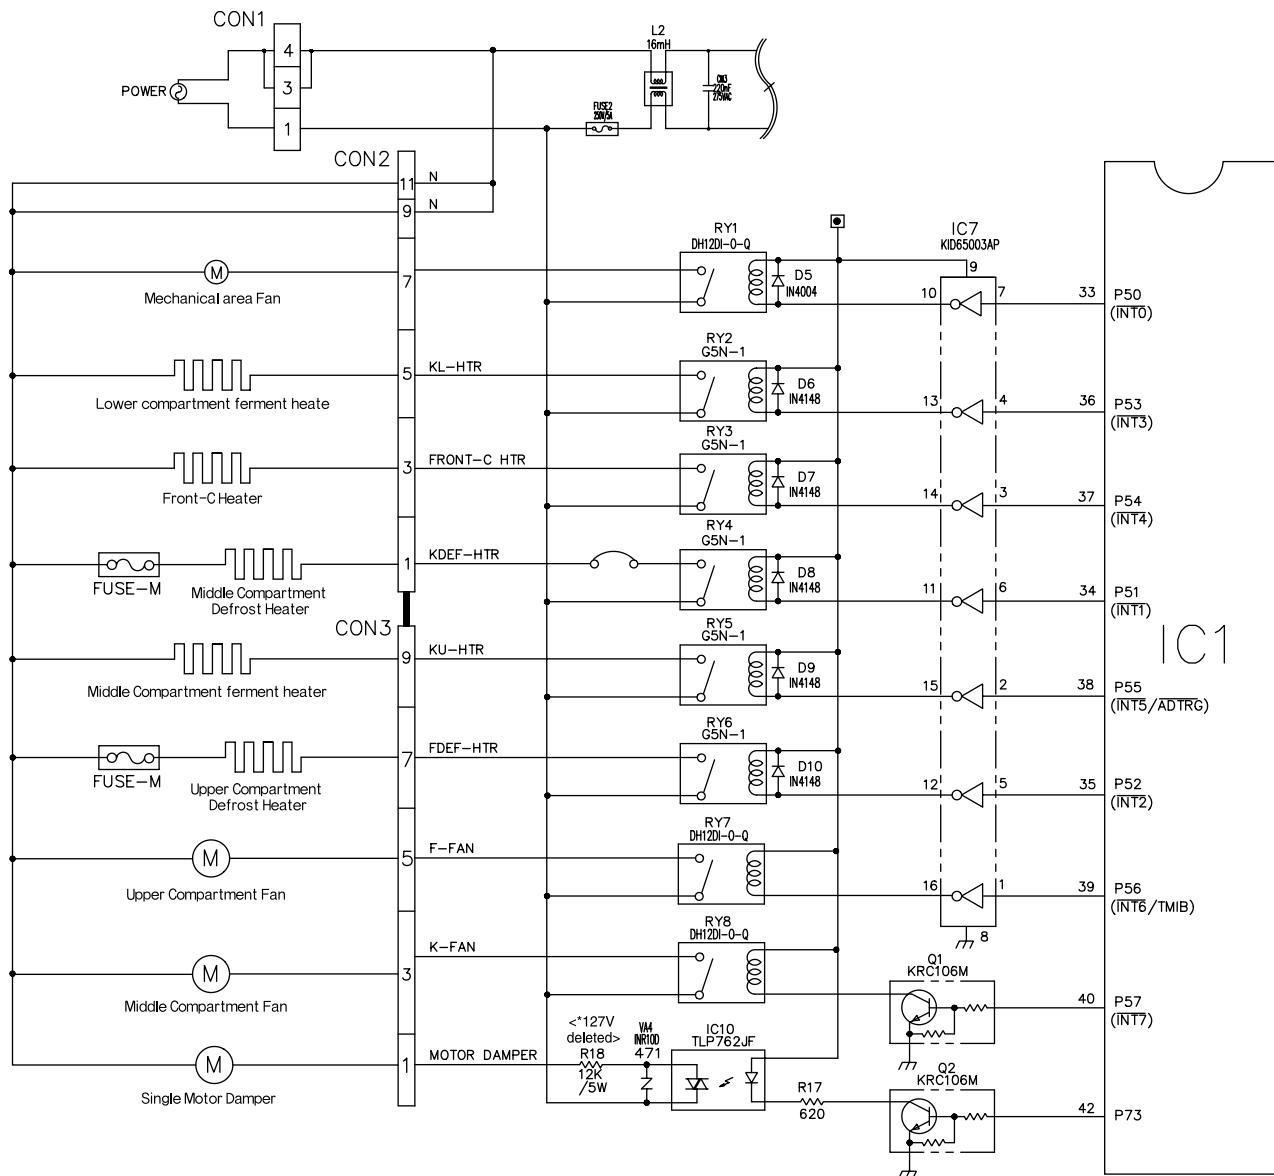

The reset circuits are intended so that the whole of function is started at the initial status by initializing various parts such as ram inside of the MICOM (IC1) when power is applied to MICOM again in input of initial power or by temporary power failure. "LOW" voltage is applied to the reset terminal of MICOM for the fixed time (10ms) at the start of power input.

During general operation, the reset terminal is at 5V (No MICOM operates in case of poor reset IC).

3-2-4. LOAD/BUZZER DRIVE CIRCUIT

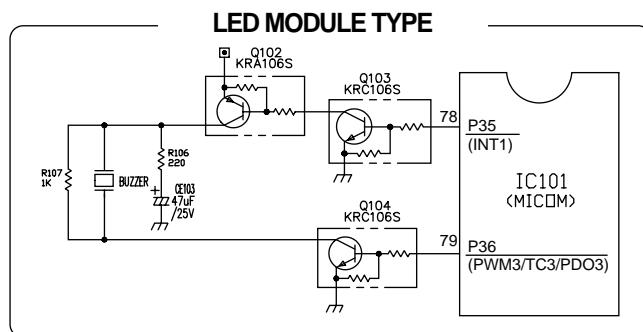

(1) Load Drive Circuit

Type of Load	COMP, Mechanical Area FAN	UPPER FAN MOTOR	UPPER DEFROST HEATER	MIDDLE FAN MOTOR	MIDDLE DEFROST HEATER	MIDDLE FERMENT HEATER	LOWER FERMENT HEATER	SINGLE MOTOR DAMPER	FRONT-C HEATER	
Measuring Point(IC7)	No.10	No.16	No.12	Q1 Collector	No.11	No.15	No.13	Q2 Colletor	No.14	
Status	ON	Within 1V								
	OFF	11 ~ 13 V								

(2) Buzzer driving circuit (located on display PCB)

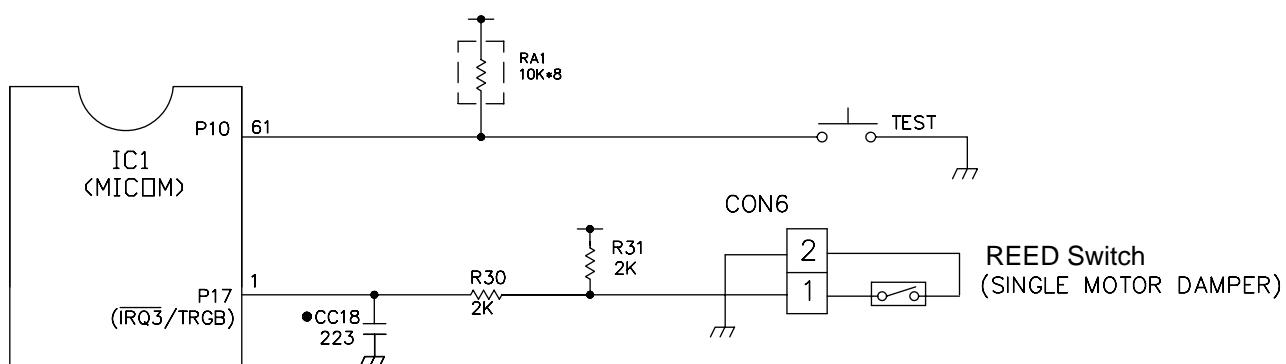

* Only the buzzer sound for the Lock/Unlock operation is shown in this SVC technical manual.

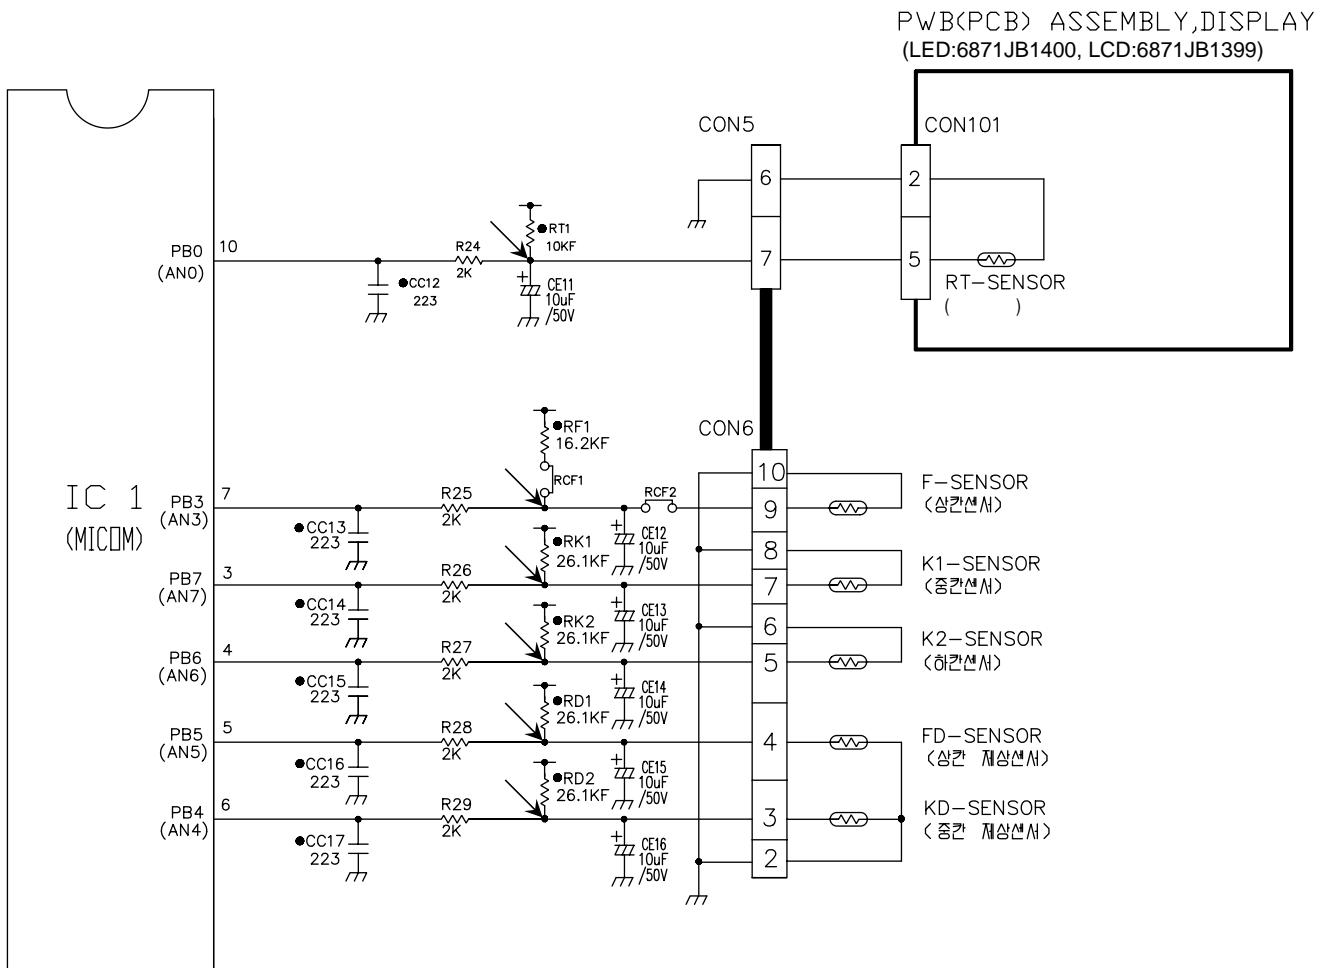

Status Measuring point	Ex) Lock: "Ding-D-Dong" sound	Ex) Lock: "Ding-D-Dong" sound	Off
IC101 (Pin 3/61)	<p>Timing diagram showing two waveforms. The top waveform is 5V and the bottom is 0V. They both switch at the same times. The period is 750ms, divided into four 45ms segments and one 70ms segment. The frequency is 1318.5Hz.</p>	<p>Timing diagram showing two waveforms. The top waveform is 5V and the bottom is 0V. They both switch at the same times. The period is 750ms, divided into four 45ms segments and one 70ms segment. The frequency is 1318.5Hz.</p>	5V
IC101 (Pin 2/62)	<p>Timing diagram showing two waveforms. The top waveform is 5V and the bottom is 0V. The 5V signal has a period of 1318.5Hz, divided into two 1046.5Hz segments and one 1174.7Hz segment. The 0V signal has a period of 1568.0Hz, divided into two 1046.5Hz segments and one 1318.5Hz segment.</p>	<p>Timing diagram showing two waveforms. The top waveform is 5V and the bottom is 0V. The 5V signal has a period of 1318.5Hz, divided into two 1046.5Hz segments and one 1174.7Hz segment. The 0V signal has a period of 1568.0Hz, divided into two 1046.5Hz segments and one 1318.5Hz segment.</p>	0V

3-2-5. SWITCH INPUT CIRCUIT

Following circuits are input circuits for detecting signal of the test switch for checking refrigerator or the reed switch of the single motor damper.

3-2-6. TEMPERATURE SENSING CIRCUIT

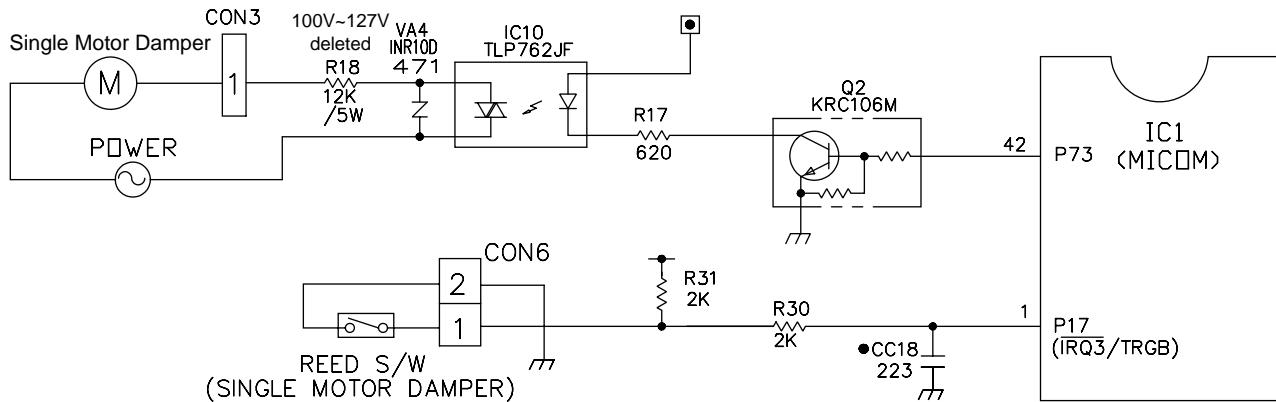

Above circuits consist of the upper sensor, middle sensor, lower sensor for adjusting setup temperature at the upper, middle and lower compartment, the ambient temperature sensor to detect ambient air temperature, the upper defrost sensor and the middle defrost sensor attached to the evaporator at the upper, middle compartment to detect the defrost return temperature. Status in short or open are as follows:

Sensor	Check points	Normal (-30 °C ~ 50 °C)	In Short	In Open
Ambient temp. Sensor	POINT Voltage			
Upper Sensor	POINT Voltage			
Middle Sensor	POINT Voltage			
Lower Sensor	POINT Voltage	0.5V ~ 4.5V	0V	5V
Upper Defrost Sensor	POINT Voltage			
Middle Defrost Sensor	POINT Voltage			

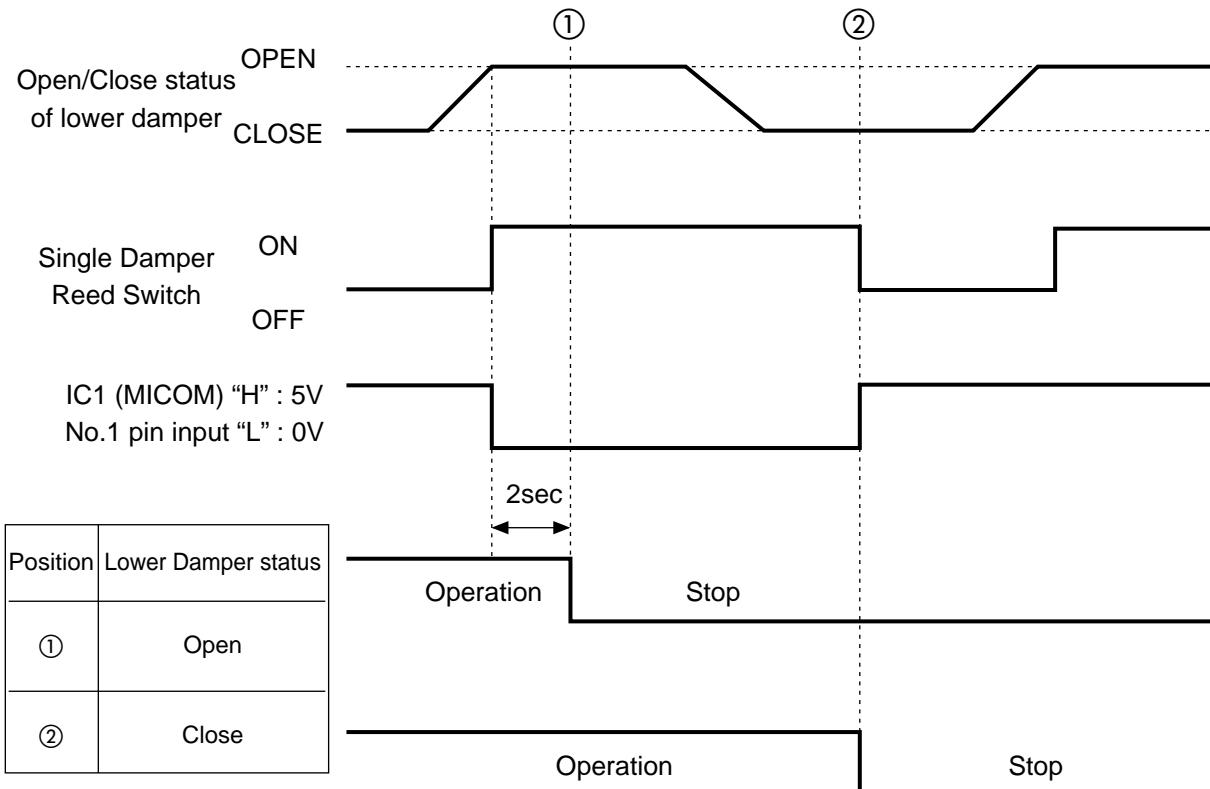

3-2-7. TEMPERATURE SENSING CIRCUIT

1. Temperature adjustment at the lower compartment consists of the circuit part for driving the damper, as electronic single motor damper, to open or close the baffle and the reed switch part to detect open/close status of the damper.
2. Drives the motor, and if there is no status change of the reed switch within 2 minutes, determines it as failure and displays as failure (See 3-1-11. Failure Diagnosis Function).
3. Rotates once for 15 seconds irrespective of temperature to detect damper status in input of initial power (initial drive inspection).

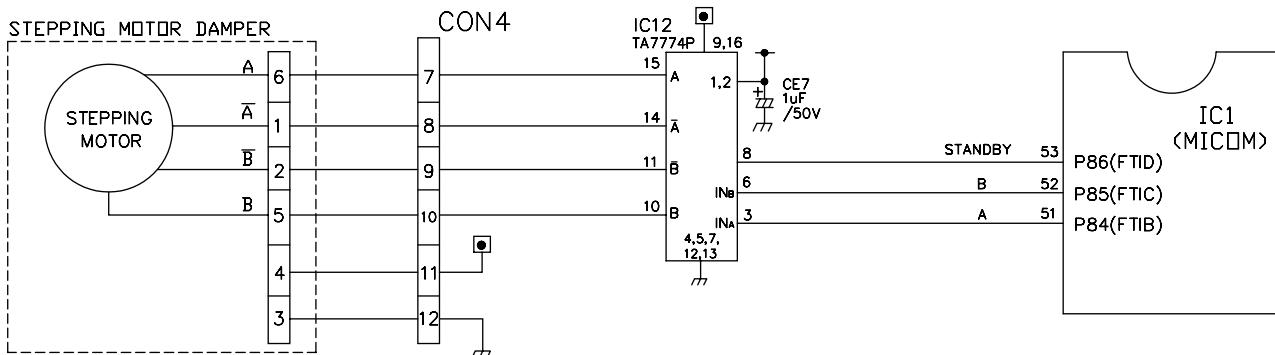

4. Open/CLOSE of the damper, status of the reed switch and No.1 pin input of the IC1 (MICOM) are as follows:

< SINGLE MOTOR DAMPER >

► The above time is time until the single motor stops after status change of the reed switch.

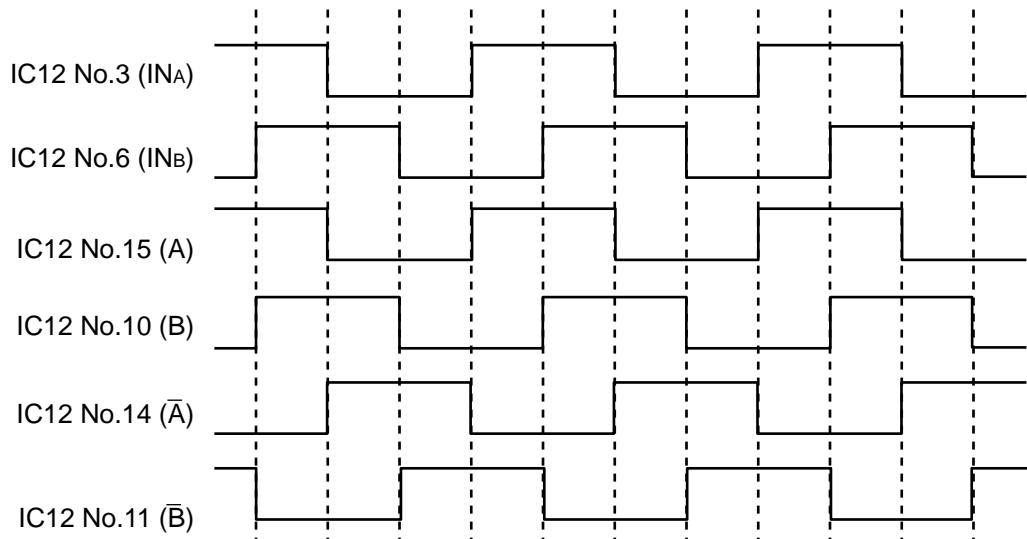

3-2-8. STEPPING MOTOR DAMPER DRIVE CIRCUIT (FOR TEMPERATURE CONTROL AT MIDDLE COMPARTMENT)

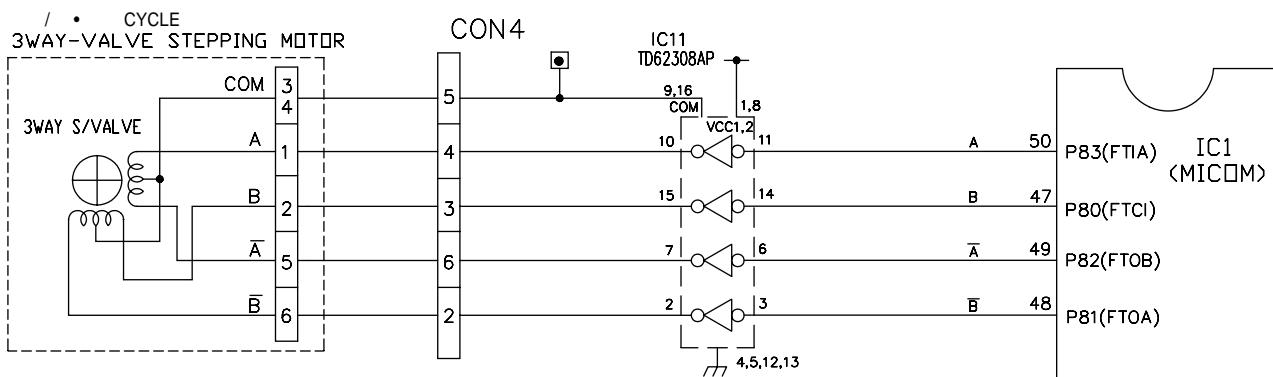

As for motor drive, the motor rotates since rotation magnetic force is formed at coils wound around each phase of the motor and the stator if outputting "High" "Low" signal as much as the fixed step numbers through the MICOM pin 51 and pin 52 after applying "High" signal to the IC 12 (TA7774P) from the MICOM pin 53.

Explanation) For driving method of the motor, send signal in the cycle of 3.33ms by using the terminal of the MICOM PIN53, 52 and 51 as shown in waveform of each part below. This signal is output to the output terminal No.10, 11, 14, 15 via the input terminal No.3, 6, 8 of the IC12 (TA7774P) as IC for motor drive. The motor rotates by which motor coils wound around each phase of the stator forms rotation magnetic field. The stepping motor damper rotates by which motor coils wound around each phase of the stator forms rotation magnetic field if inputting as figure to the input part (No.3 INA, No.6 INB) of the IC12 (TA7774P) for motor drive.

CCW (reverse rotation) ← → CW (positive rotation)

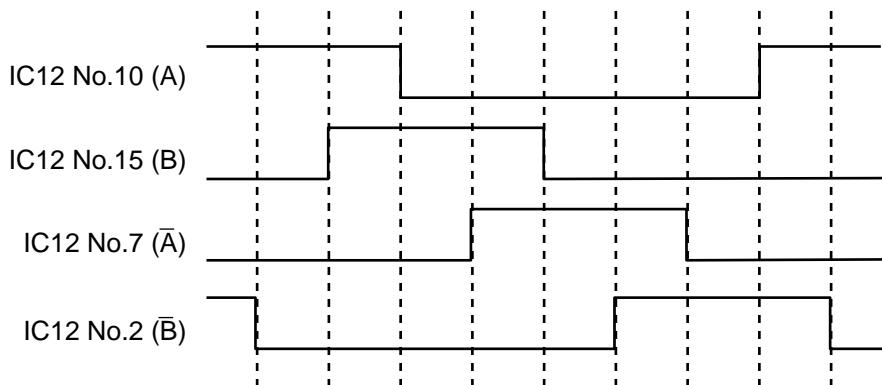

3-2-9. 3-WAY VALVE STEPPING MOTOR DRIVE CIRCUIT (FOR SWITCHING UPPER/MIDDLE/LOWER COMPARTMENT CYCLE)

As for motor drive, the motor rotates since rotation magnetic force is formed at coils wound around each phase of the motor and the stator via the IC11 (TD62308AP) as IC for motor drive if outputting "High" "Low" signal as much as the fixed step numbers from the MICOM pin 50, 47 and 48.

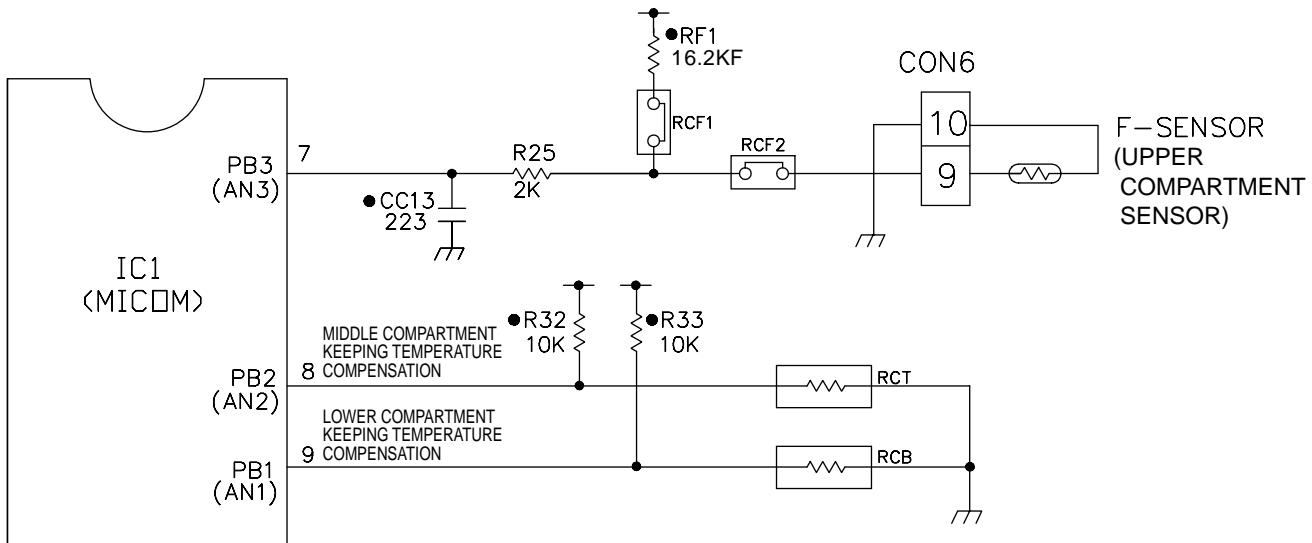

Explanation) For driving method of the motor, send signal in the cycle of 30ms by using the terminal of the MICOM PIN 50, 47, 49 and 48 as shown in waveform of each part below. This signal is output to the output terminal No.10, 15, 7, 2 via the input terminal No.11, 14, 6, 3 of the IC11 (TD62308AP) as IC for motor drive. The motor rotates by which motor coils wound around each phase of the stator forms rotation magnetic field.

CW (positive rotation) ← → CCW (reverse rotation)

3-2-10. KEEPING TEMPERATURE COMPENSATION AND TOO COLD/ TOO WARM CUT COMPENSATION CIRCUIT

(1) Keeping Temperature Compensation Circuit

► This circuit is used for entering the required level of temperature compensation into MICOM to adjust keeping temperature at the upper, middle and lower compartment.

Upper Compartment			Middle/Lower Compartment			Remarks	
Resistance Value		Temperature Compensation	Resistance Value		Temperature Compensation		
RCF1	RCF2		RCT(Middle)	RCB(Lower)			
0 Ω	6.2 KΩ	+2.5 °C	180 KΩ		+2.5 °C		
0 Ω	5.1 KΩ	+2.0 °C	56 KΩ		+2.0 °C		
0 Ω	3 KΩ	+1.5 °C	33 KΩ		+1.5 °C		
0 Ω	2.4 KΩ	+1.0 °C	18 KΩ		+1.0 °C		
0 Ω	1.2 KΩ	+0.5 °C	12 KΩ		+0.5 °C		
0 Ω	0 Ω	0 °C	10 KΩ		0 °C	Standard temperature	
620 Ω	0 Ω	-0.5 °C	8.2 KΩ		-0.5 °C		
1.2 KΩ	0 Ω	-1.0 °C	5.6 KΩ		-1.0 °C		
1.8 KΩ	0 Ω	-1.5 °C	3.3 KΩ		-1.5 °C		
2.4 KΩ	0 Ω	-2.0 °C	2 KΩ		-2.0 °C		
3 KΩ	0 Ω	-2.5 °C	470 Ω		-2.5 °C	Cooler	

► Temperature compensation table by adjustment of resistance value (difference value against current temperature).

Ex) Temperature at the middle compartment increases by +1°C if changing compensation resistance at the middle compartment (RCT) from 10K (current resistance) to 18K (corrected resistance).

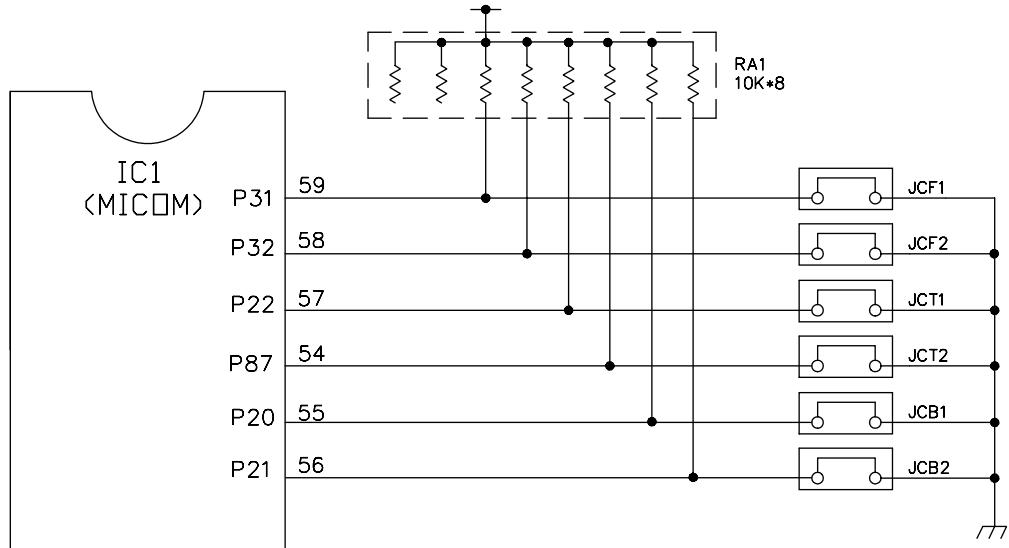

► Temperature compensation table at the upper compartment is as follows:

Division	Modification Current	RCF1:3 KΩ	RCF1:2.4 KΩ	RCF1:1.8 KΩ	RCF1:1.2 KΩ	RCF1:620 Ω	RCF1: $\frac{1}{2}$ KΩ	RCF1: $\frac{1}{3}$ KΩ	RCF1: $\frac{1}{4}$ KΩ	RCF1: $\frac{1}{5}$ KΩ	RCF1: $\frac{1}{6}$ KΩ

(2) Too Cold/Too Warm Cut Compensation Circuit.

Upper compartment cut compensation		Upper compartment temperature compensation value		Middle compartment cut compensation		Middle compartment temperature compensation value	Lower compartment cut compensation		Lower compartment temperature compensation value
Too cold compensation	Too warm compensation	Too cold compensation	Too warm compensation	Too cold compensation	Too warm compensation		Too cold compensation	Too warm compensation	
JCF1	JCF2	Frozen Food	The others	JCT1	JCT2		JCB1	JCB2	
CUT		+2 °C	+1 °C	CUT		+1 °C	CUT		+1 °C
	CUT	-2 °C	-1 °C		CUT	-1 °C		CUT	-1 °C
CUT	CUT	0 °C	0 °C	CUT	CUT	0 °C	CUT	CUT	0 °C
		0 °C (When shipping from factory)				0 °C (When shipping from factory)			0 °C (When shipping from factory)

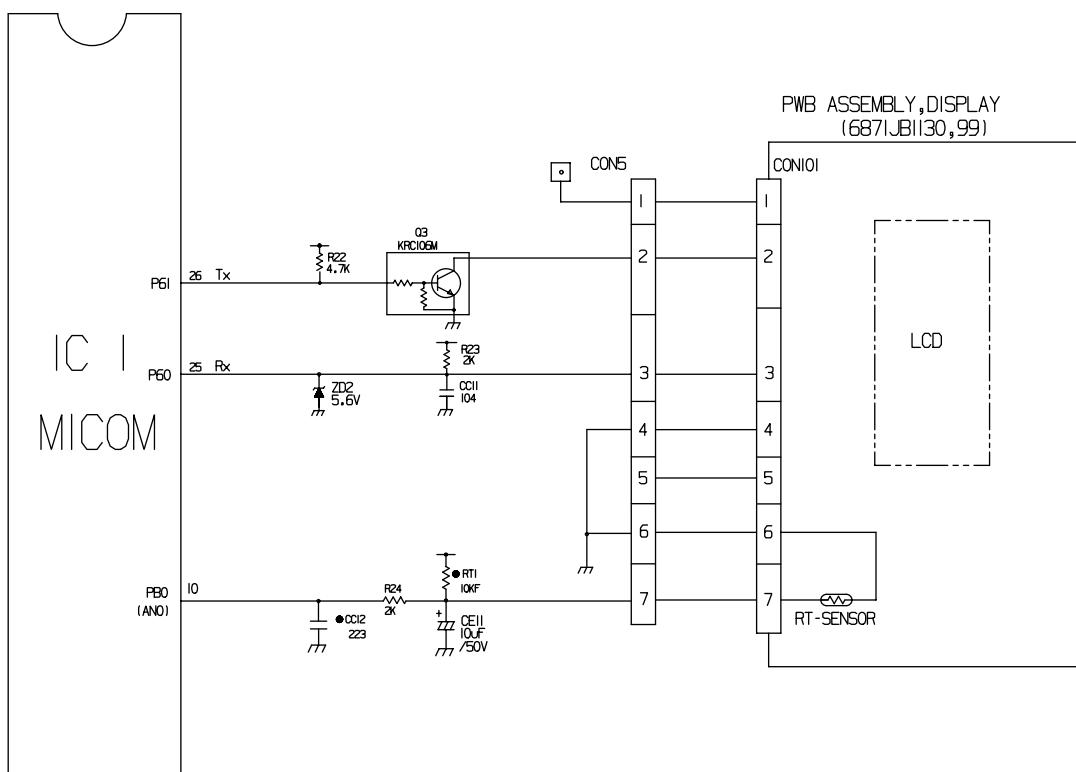

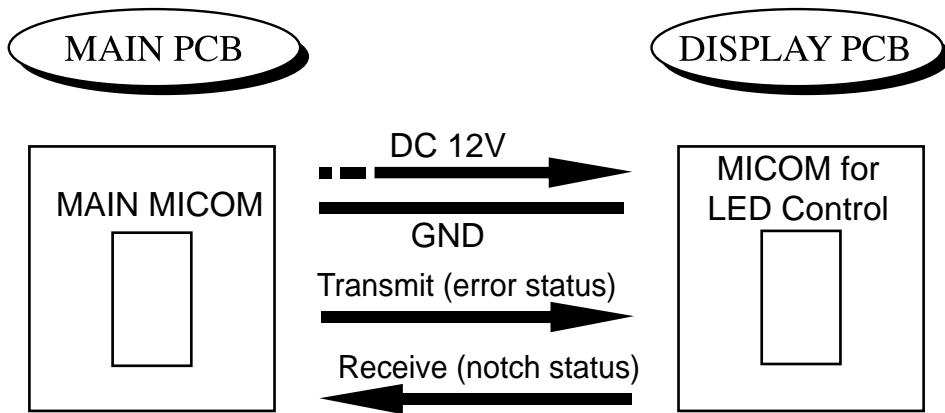

- The cut compensation circuit compensates the keeping temperature of the upper/middle/lower compartment by simply cutting it out of service for a brief period.

3-2-11. COMMUNICATION CIRCUIT BETWEEN MAIN PCB AND DISPLAY PCB

Following circuits as communication circuits are circuits for changing necessary information between the main MICOM of the main PCB and the MICOM for LED control of the display PCB.

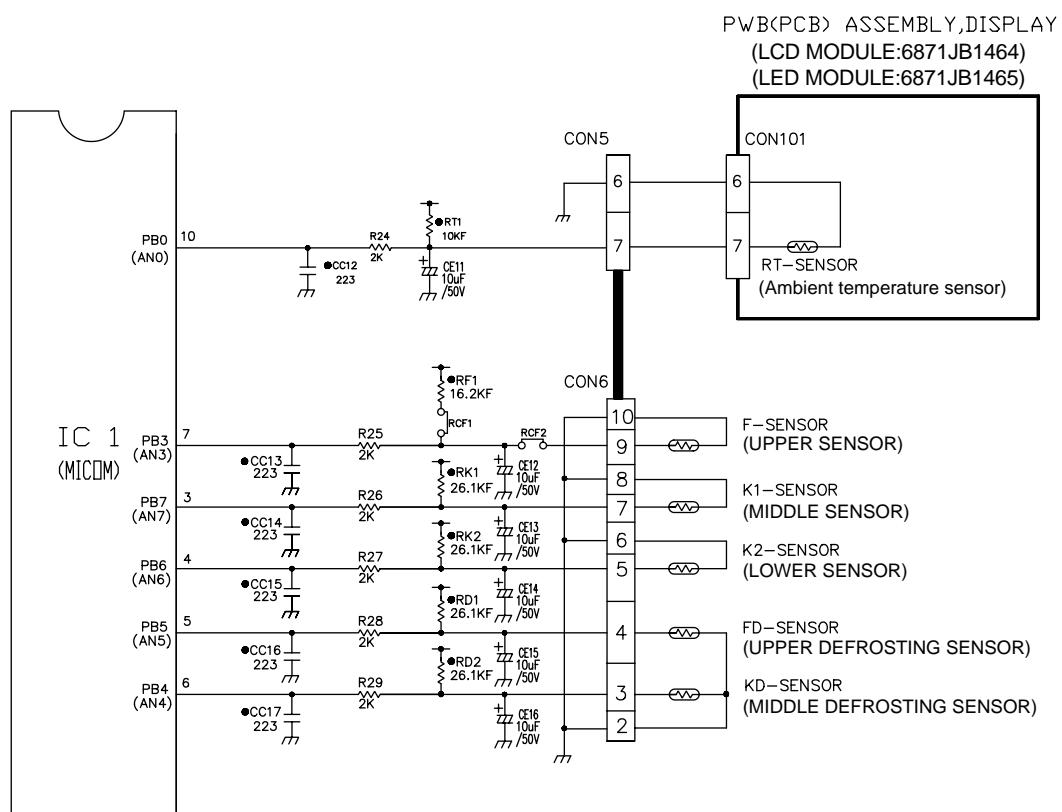

DC12V for driving the display PCB, transmit/receive circuits are required.

Poor communication occurs where continuing information change between the main MICOM of the main PCB and the MICOM for LED control of the display PCB is not done for more than 30 seconds.

3-3. SENSOR RESISTANCE CHARACTERISTICS TABLE

Measuring Temperature(°C)	Upper/Middle/Lower sensors, RT sensor, Upper/Middle defrosting sensors
-20 °C	77 KΩ
-15 °C	60 KΩ
-10 °C	47.3 KΩ
-5 °C	38.4 KΩ
0 °C	30 KΩ
+5 °C	24.1 KΩ
+10 °C	19.5 KΩ
+15 °C	15.9 KΩ
+20 °C	13 KΩ
+25 °C	11 KΩ
+30 °C	8.9 KΩ
+40 °C	6.2 KΩ
+50 °C	4.3 KΩ

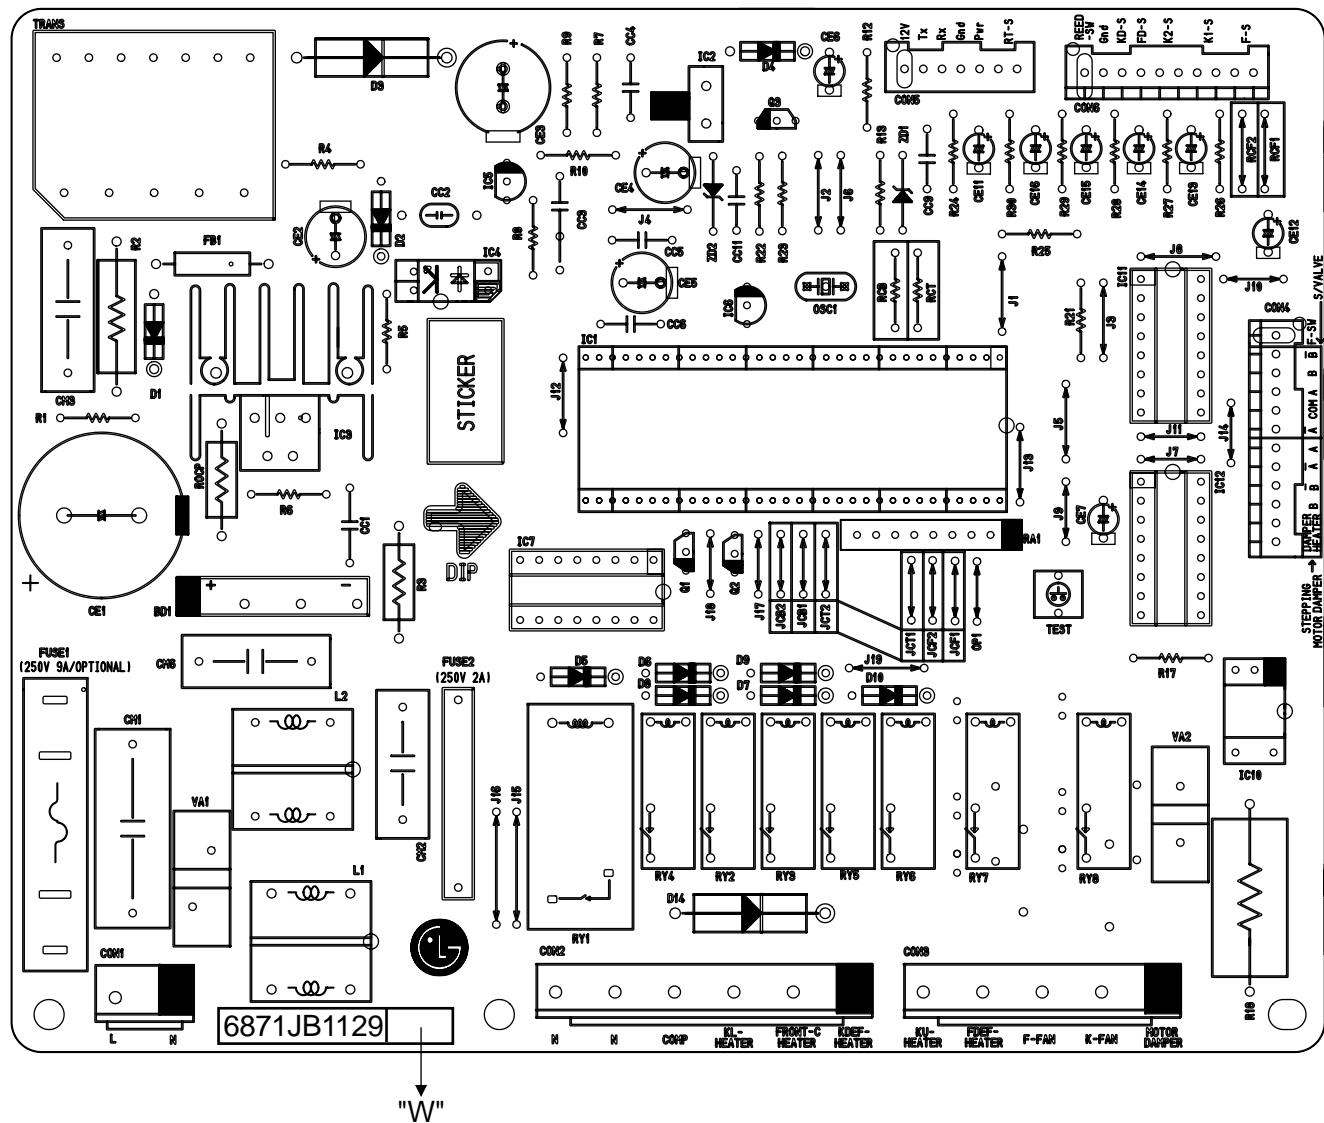

- ▶ Allowance of sensor resistance is 3%.
- ▶ Measure resistance value of sensor after leaving it for more than 3 minutes (delay is required due to sensing speed).
- ▶ Always use a digital tester! Analog testers have too great a margin of error.
- ▶ Measure resistance after separating PWB (PCB) assembly, the CON6 on the main part since the upper compartment sensor and the middle compartment sensor have no connector. Measure resistance at both ends of No.6, 7 of the CON5 for the RT-sensor. However, measure resistance at both ends of the sensor after separating barrier assembly between the middle compartment and the lower compartment for the lower compartment sensor.

3-4. PCB PARTS DIAGRAM AND LIST

3-4-1. PWB(PCB) ASSEMBLY, MAIN(LED MODULE TYPE)
