## PERSONAL PORTABLE

Model 450-P

FOUR VALVE, BROADCAST BATTERY OPERATED SUPERHETERODYNE

ISSUED BY
AMALGAMATED WIRELESS (A/SIA.) LTD.

## ELECTRICAL SPECIFICATIONS.

FREQUENCY RANGE	1600-540 Kc/s (187.5-555M)	VALVE COMPLEMENT:	LOUDSPEAKER
INTERMEDIATE FREQUENCY BATTERY COMPLEMENT	455 Kc/s	(I) IR5 Converter	(Permanent Magnet): 3½ inch—Code No. BC1.
DATIEN COMPLEMENT	2-1.5 volt torch cells  "B" Battery: 1-67½ volt Minimax	(2) IT4 I.F. Amplifier (3) IS5 Det., A.V.C., A.F.	Transformer XJI V.C. Impedance 3 ohms at 400 C.P.S. Undistorted Power Output:
BATTERY CONSUMPTION	"A" Battery:	Amplifier	70 milliwatts  Controls:
	"B" Battery: 8.0 mA	(4) 3S4 Output	Tuning—top Volum <b>e</b> —bottom.

## MECHANICAL SPECIFICATIONS.

	Height	Width	Depth		
Cabinet Dimensions (inches)	87	4 <del>1</del>	44	Weight (Net lbs.)	5
Carton Dimensions (inches)	9 <del>1</del>	5	5	Cabinet Finish	Moulded Plastic

## GENERAL DESCRIPTION.

The model 450-P is a Personal Portable receiver housed in a most attractive moulded cabinet. Cabinet colours are: Ivory, Walnut, Burgundy and Black. Combinations of the above colours are also available — such as Black and Ivory, etc.

Features of design include: Tropic proof construction, automatic volume control, magnetite cores in I.F. transformers and oscillator coil, automatic ON/OFF switch operated by the front lid, built-in loop aerial.

## ALIGNMENT PROCEDURE.

#### Manufacturers' Setting of Adjustments.

The receiver is tested by the manufacturers with precision instruments, and all adjusting screws are sealed. Realignment should be necessary only when components in tuned circuits are repaired or replaced, or when it is found that the seals over the adjusting screws have been broken.

It is especially important that the adjustments should not be altered unless in association with the correct testing instruments listed below.

For all alignment operations, except aerial stage, connect the "low" side of the signal generator to the receiver chassis and keep the generator output as low as possible to avoid A.V.C. action. Also, keep the volume control in the maximum clockwise position.

#### Testing Instruments.

- (1) A.W.A. Junior Signal Generator, type 2R3911, or
- (2) A.W.A. Modulated Oscillator, type J6726.

  If the modulated oscillator is used, connect an 0.25 megohm non-inductive resistor across the output terminals.
- (3) A.W.A. Output Meter, type 2M8832.

### ALIGNMENT TABLE.

Order	Connect "high" side of generator to:	Tune Generator to:	Tune Receiver Dial to:	Adjust for maximum peak output:
1	Aerial Section of Gang (Front portion)	455 Kc/s	540 Kc/s	L7 (core)
2	Aerial Section of Gang (Front portion)	455 Kc/s	540 Kc/s	L6 (core)
3	Aerial Section of Gang (Front portion)	455 Kc/s	540 Kc/s	L5 (core)
4	Aerial Section of Gang (Front portion)	455 Kc/s	540 Kc/s	L4 (core)
	Repeat above adju	stments until the maxi	mum output is obtained.	
5 6 7	Inductively coupled to loop * Inductively coupled to loop * Inductively coupled to loop *	600 Kc/s 1500 Kc/s 1500 Kc/s	600 Kc/s 1500 Kc/s 1500 Kc/s	L.F. Osc. Core Adj. (L2)† H.F. Osc. Adj. (C6) H.F. Aerial Adj. (C2)
peat 5, 6 ar	nd 7 until the maximum output is	obtained.		

<sup>†</sup>Rock the tuning control back and forth through the signal.

#### CHASSIS REMOVAL.

Remove the back lid and withdraw the batteries from their compartments.

Open the front lid and pull the knobs straight off their spindles. Remove the four mounting screws from the front panel and withdraw the chassis from the cabinet.

Care should be taken when removing the chassis that the plunger operating the ON/OFF switch does not fall out and become lost.

When service has been completed make sure that the plunger is in its correct position before replacing the chassis.

#### SOCKET VOLTAGES

	Valve	Bias Volts	Screen Grid to Chassis Volts	Anode to Chassis Volts	Anode Current mA	Heater Volts
IRE	Converter	0 .	30	58	0.5	1.4
	I.F. Amp.	Ö	30	58	1.0	1.4
	Det., A.V.C., A.F. Amp	Ó	20*	25*	0.04	1.4
	Output	-7.0	58	-56	5.0	1.4

Total H.T. Current - 8.0 mA D.C.

<sup>\*</sup>A coil comprising 3 turns of 16 gauge D.C.C. wire and about 6 inches in diameter should be connected between the output terminals of the test instrument and placed co-axial with the loop and distant not less than 6 inches from it.

<sup>\*</sup>Calculated from measured current. An ordinary voltmeter will register a lower value.

Measured with no signal input.

Disconnect the lead connecting pin 7 on the output valve socket to pin 7 on the 155 socket and remove the insulating sleeve. Then, re-connect the lead from pin 7 to pin 1 on the output valve socket and thence to pin 7 on the 155 socket.

A 3S4 valve may now be plugged in and the receiver operated as before.

## D.C. RESISTANCE OF WINDINGS.

Winding	D.C. Resistance in ohms
Oscillator Coil	
Primary (L2) Secondary (L3)	2 8
I.F. Transformer Windings	30
Loudspeaker Input Transformer (TI) XJI Primary XJI Secondary	350

\*Less than I ohm.

The above readings were taken on a standard chassis, but substitution of materials during manufacture may cause variations, and it should not be assumed that a component is faulty if a slightly different reading is obtained.
