SECTION 1 SERVICING NOTE

SAFETY CHECK-OUT

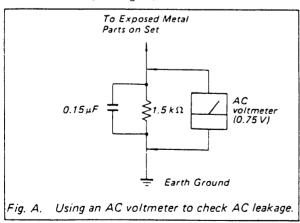

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

- A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
- A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
- 3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also, use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

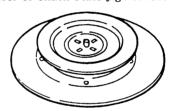

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe more than 25cm away from the objective lens.

CHUCK PLATE JIG ON REPAIRING

On repairing CD section, playing a disc without the CD lid, use Chuck Plate Jig.

• Code number of Chuck Plate Jig: X-4918-255-1

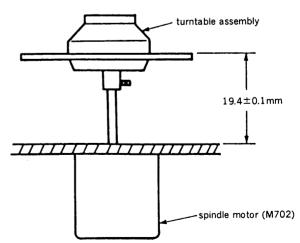

NOTE ON REPAIRING

The spindle motor (M702) and the turntable assembly are individually supplied as repair parts.

When repairing M702, please order the turntable assembly together.

Dimension is as follows.

SECTION 2 GENERAL

This section is extracted from instruction manual.

2-1. FEATURES

8-times over-sampling and digital filter

Signal process frequency of 8 times the reference frequency means playback with less distortion.

Dual D/A conversion system

High-fidelity playback with less phase shift is accomplished by the dual converter which works for the left and right channels independently.

Back-lighted display

Clear display makes it easy to distinguish the displayed indications at a glance in a dark place or at night.

Memory preset tuning

A total of 20 stations can be stored in any order.

High quality sound

- The Sony MEGA BASS system produces a powerful bass.
- By pressing the SPACE SOUND button, depth and spaciousness can be added to the original sound.

A high performance, high fidelity CD player with many functions

- An 8 cm (3-inch) CD can be played without using an adaptor.
- Repeat function allows playing either the entire disc or a single selection.
- · Program play for playing selections in the order desired.
- Shuffle play for playing selections repeatedly in random order.
- · A synchronized CD starting system for recording.
- An automatic editing function—The CD player automatically edits the selections on a CD depending on the tape length.

Digital clock timer

- You can listen to CD, radio or a taped program (for CFD-765 only) at a preset time.
- You can record CD or radio programs at a preset time. (for CFD-765 only)

Others

- · High or normal speed tape dubbing
- · CFD-765 is supplied with a remote commander.

2-2. PRECAUTIONS

On safety

- Operate the unit only on 120V AC or 15V DC.
 For AC operation, use the AC power cord supplied; do not use any other type.
- For battery operation, use ten size D (R20) batteries.
- Unplug the unit from the wall outlet when it is not to be used for an extended period of time.
- When the internal batteries are not to be used, remove them to avoid damage caused by battery leakage and corresion.
- As the laser beam used in the CD player section is harmful to the eyes, do not attempt to disassemble the casing.
 Refer servicing to qualified personnel only.
- Should any solid object or liquid fall into the unit, unplug the unit, and have it checked by qualified personnel before operating it any further.

On installation

- Do not leave the unit in a location near heat sources, or in a place subject to direct sunlight, excessive dust, or mechanical shock.
- If the unit is left in a car parked in the sun, be sure to choose a location in the car where the unit will not be subject to the direct rays of the sun.
- Do not place anything within 10 mm of the side of the cabinet. The ventilation holes must be unobstructed for the proper operation of the unit and to prolong the life of its components.
- Since a strong magnet is used for the speakers, keep personal credit cards using magnetic coding or springwound watches away from the unit to prevent possible damage from the magnet.

On operation

- If the unit is brought directly from a cold to a warm location, or is placed in a very damp room, moisture may condense on the lenses inside the CD player section. Should this occur, the player will not operate properly. In this case, remove the disc and wait about an hour for the moisture to evaporate.
- If the unit has not been used for a long time, set it in the playback mode to warm it up for a few minutes before inserting a cassette.
- The use of cassettes longer than 90 minutes is not recommended except for long continuous recording or playback.

Whether you are going to operate the unit on AC power or on batteries, make sure to insert three size AA (R6) batteries for the clock/timer/memory functions.

If a cassette cannot be removed

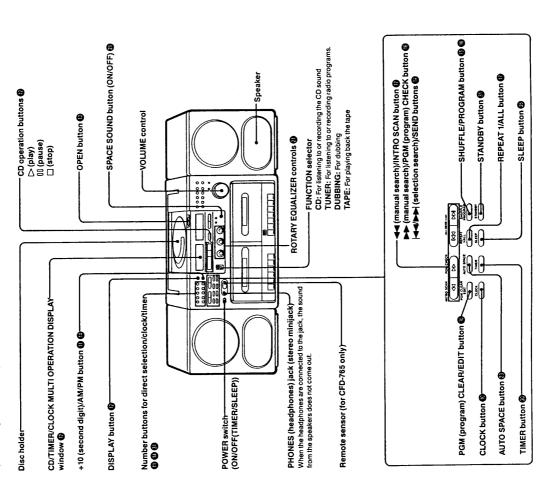

If the power was accidentally cut off (for example, the AC power cord was disconnected, the batteries fell out or an interruption of the main power source occurred) after ▶, REC or HI-SPEED DUB was pressed, it may not be possible to eject the cassette. In this case, supply power to the unit again and then press ■ ▲ to remove the cassette.

If the cassette holder cannot be closed firmly
Press ■ △ to remove the cassette and reinsert it into the
holder. Do not attempt to play back or record when the cassette holder is not firmly closed. Otherwise, the cassette may
be damaged.

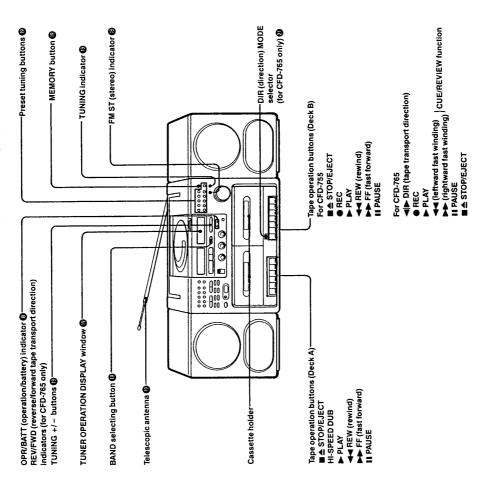

If you have any question or problem concerning your unit, please consult the nearest Sony dealer.

Notes on Adjustment

- Perform adjustment in service mode.
 After adjustment, be sure to release service mode.
- 2. Perform adjustment in the order given.
- 3. Use the disc (YEDS-18, Part No. 3-702-101-01) only when so indicated.

Before Adjustment

Put the set into service mode and perform the following checks. Repair if there are any problems.

How to put into service mode.

- 1. Short-circuit between the test point on CD control board.
- 2. Turn the power on.
- 3. When LCD lights up and brinks.
- 4. Release the short-circuit the test point.

In Service mode

Perform the following check. Repair if there are any problems

- LCD brinks with the following orders.
 All lights up → common 0 → 1 → 2 → 3 → All lights off.
- When the pause key pushed. LCD brink stops and the laser diode in the optical pick-up block lights up.

E-F Balance Adjustment

This adjustment is to be done when the optical block is replaced.

Adjustment Procedure:

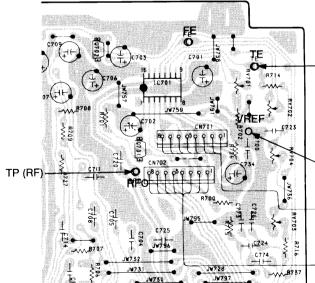

- 1. Connect the oscilloscope between TP (TE) and TP (VREF.)
- 2. Put the set into service mode.
- 3. Press the **→** and **←** keys to move the FOP to the center.
- 4. Insert disc (YEDS-18) and press ► key.
- 5. Adjust RV701 so that the oscilloscope traverse waveform is symmetrical, as shown in the figure below.
- 6. Release service mode after adjustment is completed.

CD MAIN BOARD (CONDUCTOR SIDE)

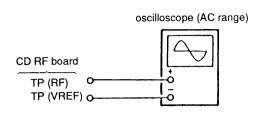

Adjustment value: $2 \pm 0.5 \text{ Vp-p}$

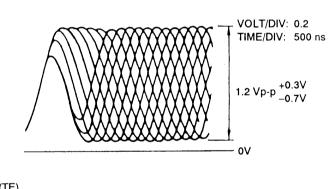

Focus Bias Adjustment

This adjustment is to be done when the optical block is replaced.

Adjustment Procedure:

- 1. Connect the oscilloscope between TP (RF) and TP (VREF).
- 2. Put the set into service mode.
- 3. Press the **→** and **←** keys to move the FOP to the center. (Move the FOP to the music area on the disc to enable easy visibility of the eye pattern.)
- 4. Insert disc (YEDS-18) and press ► key.
- 5. Adjust RV702 so that the oscilloscope waveform is as shown in the figure below (eye pattern). A good eye pattern means that the diamond scape (\diamondsuit) in the center of the waveform can be clearly distinguished.
- 6. Release service mode after adjustment is completed.
- RF signal reference waveform (eye pattern).

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

• See page 17 for Adjustment Location.

REFERENCE

Focus/Tracking Gain Adjustment

A frequency response analyzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment. Focus/tracking gain determines the pick-up follow-up (vertical

and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

However, as these reciprocate, the adjustment is at the point where both are satisfied.

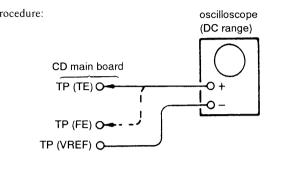

- When gain is raised, the noise when the 2-axis device operates increases. • When gain is lowered, it is more susceptible to mechanical
- shock and skipping occurs more easily. • When gain adjustment is off, the symptoms below appear.

Gain Symptoms	Focus	Tracking
• The time until music starts becomes longer for STOP → ▶ PLAY on automatic selection (►, ► buttons pressed. (Normally takes about 2 seconds.)	low	low or high

The following is a simple adjustment method.

- Simple Adjustment -

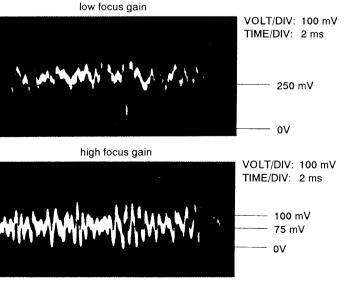

Note: Since exact adjustment cannot be performed, remember the positions of the controls before performing the adjustment. If the positions after the simple adjustment are only a little different, return the controls to the original position.

- 1. Keep the set horizontal.

SECTION 8 ELECTRICAL PARTS LIST

NOTE:

The components identified by mark A or dotted line with mark A are critical for safety.

Replace only with part number specified.

Les composants identifiés par une marque A sont critiques pour la sécurité.

Ne les remplacer que par une piéce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- · -XX, -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS All resistors are in ohms METAL: Metal-film resistor METAL OXIDE: Metal Oxide-film resistor F: nonflammable
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- SEMICONDUCTORS In each case, u: μ , for example: uA...: μ A..., uPA...: μ PA... uPB...: μPB..., uPC...: μPC..., uPD...: μ PD...
- CAPACITORS $uF: \mu F$
- COILS $uH: \mu H$

Printing Method for Large Sized Documents Such As Circuit Diagrams

Printing the page that exceeds A4-size two pages (or letter size) is possible by specifying the print range. (Acrobat Reader Version 4.0 or later)

- 1. The enlarged print is made, if a smaller range than A4 size is specified and the A4 size is selected as a print paper.
- 2. Almost real sized print is made, if the range is specified, meeting the print paper size.
- 3. The reduced print is made, if a larger range than the print paper size is specified.

PRINTING BY SPECIFYING A RANGE

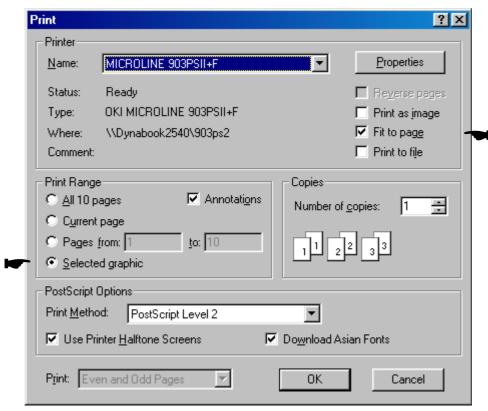

In printing out the drawings such as a schematic diagram and a printed wiring board larger than the printed paper size, they can be printed by specifying the range. (Acrobat Reader Version 4.0 or later)

- 1. Display the page to be printed.
- 2. From the File menu, select [Page Setup] and set the paper size.
- 3. From the Command bar, select [Graphic Select Tool].

(Keep pressing $T_{\mathbb{Q}}$, select \P

- 4. Dragging the cursor, enclose the range on the page to be printed.
- 5. From the File menu, select [Print] and make sure that the [Selected Graphic] is already checked. Also, if [Fit to page] is checked, the selected range is enlarged or reduced (and rotated as necessary) meeting the paper size.

6. To cancel the printed range, click an arbitrary position on the screen.
