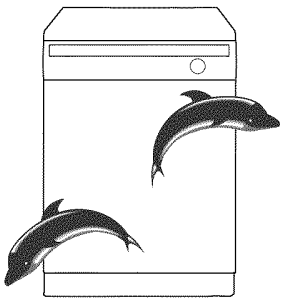
Whirlpool



Service Manual

Dishwasher integratable ADG 957/1 M

Model ADG 957/1 M
Version 8542 957 38310

This documentation is only intended for qualified technicians who are aware of the respective safety regulations.

Date: 30.06.1998
Subject to modification
Document-No.: 4812 718 13216

Technical data

Dimension

Height	82.0-87.0	cm
Width	59.5	cm
Depth	57.5	cm
Weight	47	kg

Wooden door (for 22 mm thickness)

Thickness min..	16	mm
Thickness max.	20	mm
Width min.	592	mm
Width max.	595	mm
Height min.	620	mm
Height max.	718	mm
Weight min.	2.5	kg
Weight max.	6.5	kg
Max. stick out over lower edge of appliance door	90	mm
Height of plinth min.	93	mm

Electronic boards

Service boards	see spare part list
Serial boards	
UB	4619 720 80501
CB	4619 720 83101

Succession of programs

Programs	see program diagram
Succession	1-3-5b-6b-7

Alarms

Refill salt
Refill rinse aid

Options

Zone washing

Program information

Start indicator

Volume (normal program)

Water	Volume	Level
Regeneration	0.3 l	15 mm
Back rinse 3x	1.0 l	68 mm
Prewash	4.8 l	122 mm
Prewash/Zone washing	4.0 l	120 mm
Main wash	4.5 l	121 mm
Main wash/Zone washing	3.5 l	117 mm
Intermediate rinse 1	4.0 l	120 mm
Intermediate rinse 1/ Zone washing	3.5 l	117 mm
Intermediate rinse 2	4.0 l	120 mm
Intermediate rinse 2/ Zone washing	3.5 l	117 mm
Clear rinse	4.0 l	120 mm
Clear rinse/Zone washing	3.5 l	117 mm
Safety / overflow	8.5 l	141 mm

Measuring the level

Remove the coarse sieve, put in a measuring meter into the sump, measure the hight of the water level.

Detergent max.

Pre-wash	10	cm^3
Main-wash	45	cm^3
Rinse aid	125	cm^3
6 Dosage steps	1 - 6	ml

Water softener

Saltcontainer	2	kg
Resin container	900	cm^3
Regeneration dosage	300	cm^3

Water pressure

Inlet pressure	0.3-10	bar
Spray pump pressure	0.4	bar

Rotations

Spray pump motor	2800	RPM
Drain pump motor	3000	RPM
Spray arm lower	20 - 40	RPM
Spray arm upper	25 - 35	RPM
Ceiling rotor	45 - 65	RPM

Technical data

Flow rates / Inlet volume

Flow meter (at 0.3 bar = quantity 1.1 l/min)	208	Imp/l
Spray pump	~ 70	l/min
Drain pump	16	l/min
Pump height max.	1.1	m
Inlet valve	4.5	l/min
Valve for Zone washing	30	l/min
Spray arm lower	33	l/min
Sprayarm upper	27	l/min
Ceiling rotor	10	l/min

Electrical data

Base data

Voltage	220/230	V
Frequency	50	Hz
Total power	2.0-2.2	kW
Fuse	10	A

Motor

Spray pump motor

Voltage	220/230	V
Power consumption	160	W
HI	81	Ω
HA	44	Ω
Capacitor	4	µ F

Drain pump motor

Voltage	220/240	V
Power consumption	30	W
Resistance	146	Ω

Heating

1 Element system

Voltage	220/230	V
Power consumption	1.87/2.04	kW
Resistance	24.5	Ω
Heating speed	~ 2.0	˚C/min
Temperature on surface	~ 115	˚C
Safety thermostat self reset	85	˚C

Potentiometer

Position 0	0.0	kΩ
Position 1	0.5	kΩ
Position 2	1.0	kΩ
Position 3	1.4	kΩ
Position 4	1.8	kΩ
Position 5	2.3	kΩ
Position 6	2.6	kΩ

Water valves

Single valve at inlet hose

Voltage	220/240	V
Frequency	50/60	Hz
Resistance	3.76	kΩ

Regenerating valve

Voltage	220/240	V
Frequency	50/60	Hz
Resistance	3.13	kΩ

Valve for zone washing

Voltage	220-240	V
Frequency	50/60	Hz
Resistance	4	kΩ

Coil of dispenser

Voltage	220/240	V
Frequency	50/60	Hz
Resistance	1.5	kΩ

Reedcontact

flow meter
salt control
rinse aid control

NTC

15 ˚C	75	kΩ
20 ˚C	62	kΩ
30 ˚C	43	kΩ
40 ˚C	28	kΩ
50 ˚C	19	kΩ
60 ˚C	13	kΩ
70 ˚C	9	kΩ
80 ˚C	6	kΩ
85 ˚C	5	kΩ

Technical data

Regeneration

Volume	300	cm^3
Position 0		
after wash cycles	10	
water hardness	0-5	˚dh
	0-0.9	mmol/l
	0-9	˚Fh
Position 1		
after wash cycles	8	
water hardness	6-10	˚dh
	1-1.8	mmol/l
	10-18	˚Fh
Position 2		
after wash cycles	6	
water hardness	11-15	˚dh
	1.9-2.7	mmol/l
	19-27	˚Fh
Position 3		
after wash cycles	4	
water hardness	16-21	˚dh
	2.8-3.7	mmol/l
	28.37	˚Fh
Position 4		
after wash cycles	3	
water hardness	22-28	˚dh
	3.8-5.0	mmol/l
	38-50	˚Fh
Position 5		
after wash cycles	2	
water hardness	29-35	˚dh
	5.1-6.3	mmol/l
	51-63	˚Fh
Position 6		
after wash cycles	1	
water hardness	36-60	˚dh
	6.4-10.7	mmol/l
	64-107	˚Fh
Salt consumption for regeneration	77	g
Number of cycles with 2 kg salt	26

Test procedure for SERVICE-TEST-PROGRAM DOLPHIN full-door dishwashers

If there is a failure on the appliance, the customer will note it by open the door and the rapidly flashing start LED and by an acoustic „beep" in a 1 second rhythm.

1. Open the door. When the start LED flashes rapidly, a failure is indicated. Start the passive test program. The stored failure will be indicated (the controlboard CB switch automatically to the program place 1).

2. Check the component.
   Unplug the indicated component from the control board (CB) and check it by using an Ohm-measure equipment.
   If the ohms are not correct, check the cables to the component and check the component itself.

3. Only if there is no reaction when pushing a push button, then test the control board (CB) and the user board (UB) with the test points.

4. At the end of the repair start the appliance and delete the failure. After this, start the test program again to see that the failure is solved.

More details: s. following pages.

Attention:

First unplug the appliance, then set the connection clamps of the volt measurement on the test points.
Danger for short circuit.
Short circuits on components can damage the control board (CB).
If electronic boards are wet, do not switch the appliance on.
For check the appliance, plug in the appliance.
Failures, which occurred during the program will store and indicate by flashing start LED.
Then start the test program without erase the failure before. The failure will indicate.
To erase the failures, you must push the start button longer than 3 seconds.
The failures F1 NTC break
F2 water leakage
F9 continuous water inlet
are checked and indicated immediately after start of the program.
Therefore these failures have to be solved before starting the active test program.

When these failures are not solved, the active test program does not run.

The electrical components get their voltage via triac from the control board (CB). For testing the volume of voltage the volt meter must be parallel to the component (the component must be connected). If the component is disconnected, then the outcomed voltage from the control board (CB) is reduced.

After starting a program this program is locked. That means neither by unplugging/switching of the appliance nor by setting an other program, the first setted program can be changed. Changing of the program is only possible by pushing the start button again for longer than 3 sec..
On appliances with separate On-Off button the last used program is stored. That means if the customer wants to use the same program again he has only to press the On-button and the Start-button.

Attention: On new service control boards the first service test program is without back rinsing. Dangerous for overfilling the appliance, in case the appliance is not empty. By running the test program a second time the back rinsing will be carried out as usual.

4619 720 87731-1

Text/Legend

Handling of failures

F0 Sensor failure
Will not indicate for the customer. The programs will finish even there is a failure. The Failure is indicated only in the active test program after 10 – 30 second's. The active test program will finish as well, even there is a failure.
If the failure in a sensorprogram appear, the machine will always choose the highest consumption (best cleaning result).
- None or wrong output from the sensor
- Unlocical or unreal measurement results

Reason:
- Defective electronic of the sensor
- Optoelectronical parts in the sensor defect
- Case of the sensor is very dirty
- Connection between sensor and control board (CB) interrupted

Attention: The failure code will not store.

F1. NTC break
Temperature out of the normal value (-3°C till +85°C)
- temperature inside higher than +85°C
- NTC defective
- dishwasher is frozen, less than -3°C

Fill in the appliance a cup of warm water to warm it up before you start it, if the temperature is less than -3°C

F2. water leakage
- water is in the drip tray

floater (LS6) switches off the WV1 and the electronic switches on the DPM till WI reports empty

F3. heating system defective
Indicated after app. 11 minutes (1. check after 5 min., after that follow 2 more checks, before the failure is indicate)
- too less heating speed (lower 1,5 °C in 3 min.)
- heating (HEW) defective
- relays (RE2) on control board (CB) is defective
- NTC - resistance fluctuation
- water indicator (WI) defective (is switched off) - spray pump (SPM) is not working

F4. draining failure
drain pump starts and after 4 min. the WI detects not empty
- drain pump (DPM) defective
- siphon closed
- control board (CB) defective
- water indicator (WI) defective (is switched on)

F5. spray arm blocked (leads not to stop the appliance)
SAB sensor sends less than 10 impulses/min.
- spray arm blocked or not fixed well
- spray pump (SPM) does not work well
- SAB sensor defective

Text/Legend

F6. water tap closed (only indicated after start of the active test program)
water valve (WV1) is switched on but flow meter (FM) sends no impulses (less than 10 imp. in 10 sec.) and the water indicator (WI) is off (empty)
- water tap closed
- water inlet hose blocked
- water inlet valve (WV1) defective
- flow meter (FM) defective (leads to FM failure)

F7. flow meter failure
water inlet valve (WV1) is switched on and the water indicator (WI) is on (full).
- flow meter (FM) sends to less impulses (less than 10 imp. in 10 sec.)
- water tap closed
- water inlet hose blocked
- water inlet valve (WV1) defective
- flow meter (FM) defective

F8. water level failure
failure monitored during spray pump is on and the water indicator switches back more than 20 times in 2 min.
- water indicator defective (should switch on after app. 1 litre)
- sieve blocked
- water strongly foams
- pot has turned off and is filled with spray water
- no stable spray pump (SPM) working

F9. continuous water inlet
water inlet valve (WV1) is switched off, water indicator (WI) on, flow meter (FM) sends impulses (more than 10 imp. in 10 sec.)
- water inlet valve (WV1) mechanically not closed
- triac (CB) permanently switched on. (short circuit)

reaction: interval 30 sec. draining / 20 sec. tracing

For salt, rinse aid, zone wash valve, sieve valve failure see active test program.

◍ Led Flashing
○ Led OFF

On appliances with only 3-programs the failures in the test program are indicated by only flashing the 3 program LED's and the buzzer.

P1 until P4 : the first 4 program LED's (seen from left)

The failure will indicate by flashing of the 4 (3) program LED's and by the buzzer „beep".

Text/Legend

Appliances with only 3 programs have no LED P4

Passive test program

The passive test program shows the stored failure. If there is no failure the passive test program runs normal.

Start procedure

Open the door

1. Choose programplace 1 (insofar as program 1 was not choosen)
2. Switch off the appliance
3. Push start button and hold it.
4. Switch on the main switch.
5. Finish pushing the start button when the start LED flashes.
6. Failure indication.
7. Repair the failure
8. Solve the failure by pushing the start button for longer than 3 sec.
9. Start the passive testprogram again. If there is no failure detected, test all LED's and after that choose program 1.
10. Finish the passive testprogram by pushing the start button for shorter than 3 sec.
11. Close the door -beep-

Active testprogram starts (see next page)

Attention:
If you can't start the active test program (Start button don't flash), normally there is one of the following failures detected: F1, F2 or F9.

When these failures are not solved before, the active test program will not run. After solving the failure you must „sign" (erase) the failure.

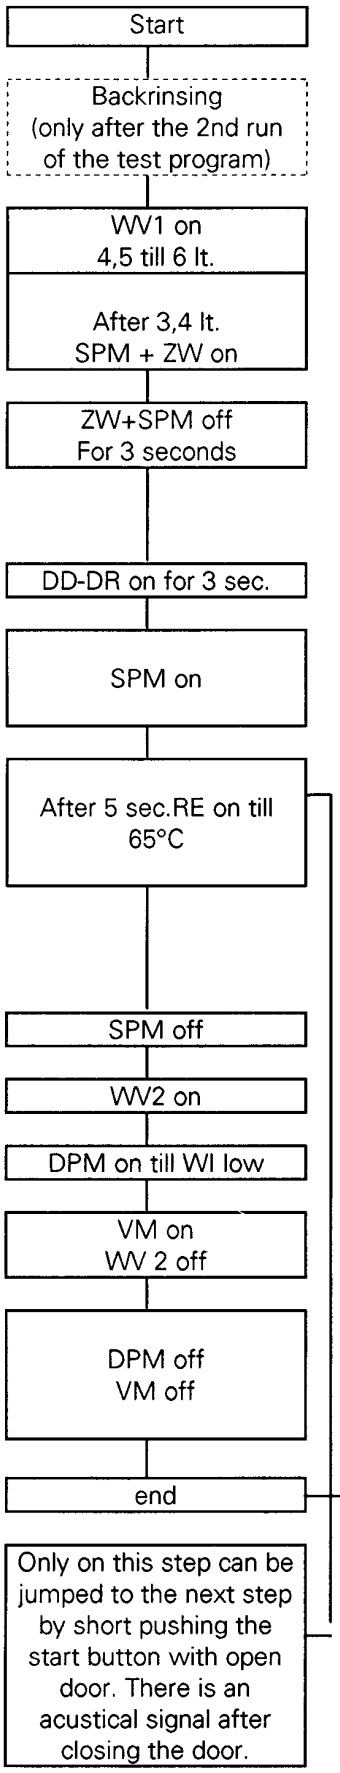
Flashing more LED's in the test program, or flashing the LED's in an other order which is not described on the page "Handling of failures" and/or occur an acoustic signal, then the cause is one of the following points:

- **During the failures was signed:**
  - the zone wash button was pushed (LED's for Start and zone wash are shine.
- **The appliance was switched off for a short time, or the door closed for a short time and opened again.**

  Solution: Reset the electronic by pushing the start button for more then 3 seconds. After the „beep" close the door and start the test program again.

Text/Legend

Active test program



Test procedure

1. Passive test program OK?
   no: repair failure, after that solve the failure and start the passive test program again.

   yes: push start button shorter than 3 second's
2. Active test program starts.

Remarks

The active test program runs to the failure position and stops or, if there is no failure, to the end.

To leave the test program push the start button for longer than 3 second's.

Too less salt or too less rinse aid leads not to the stop of the appliance.

The function of the zone wash valve can only be checked optically.
A defect leads to a not stable SPM pressure.

Attention:
If you can't start the active test program (Start button don't flash), normally there is one of the following failures detected: F1, F2 or F9

When these failures are not solved before, the active test program will not run. After solving the failure you must „sign" (erase) the failure.

acoustical signal: 3 short times 1 long time

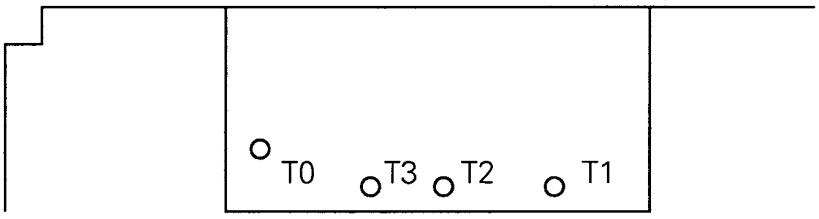
Remarks:
ZW on: zone wash valve on = no water on the upper sprayarm.
ZW off: zone wash valve off = water on the upper sprayarm.

Text/Legend

Test points on the control board

With these test points the function of the buttons can be checked.
The test points are in the service window on the control board.
For the test fine clamps, cables and volt meter with high input resistance are necessary.
Before setting the clamps on the test points, switch off the appliance.

Test points: T0 = common line T2 = analogue value
T1 = analogue value T3 = digital signal



If the appliance is switched on and the door is open, than there is voltage on the control board (CB) and user board (UB).

Check: T0 to T1

After closing the door, the voltage is always -5.2 V.
It doesn't matter which button is pushed or not and also it doesn't matter in which position the user board (UB) is (it doesn't matter which program is selected or if the start button is pushed or not).
Exception: pushed zone wash button = - 3.38 V

Check: T0 to T2

Program button not pushed:	- 5.27 V
Program button pushed:	- 2.89 V
Start button pushed:	- 0.00 V

Check: T0 to T3:

before start (start LED off):	- 2.2 V DC
after start (start LED on):	- 1.8 V DC

How exact the data are, depends on the measure equipment.
