CAUTION : Before servicing this chassis, it is important that the service technician read the "Safety Precaution" and "Product Safety Notices" in this Service Manual.

This television receiver will display television Closed (or) in accordance with paragraph 15.119 of the FCC rules.

SAFETY NOTICE

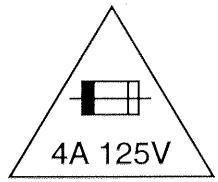

USE ISOLATION TRANSFORMER WHEN SERVICING

Component having special safety characteristics are identified by **▲** on schematics and on the parts list in this Service Data and its supplements and bulletins. Before servicing this chassis, it is important that the service technician read and follow the " Important Safety Precautions " and " Standard Note for Servicing " in this Service Manual.
for continued x-radiation protection, replace picture tube with original type of Hitachi approved equivalent type.

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

TV/VCR COMBINATION TELEVISION

August 1996

CAUTION

FOR CONTINUED PROTECTION AGAINST FIRE HAZARD,
REPLACE ONLY WITH THE SAME TYPE FUSE.

ATTENTION : POUR UNE PROTECTION CONTINUE LES RISQUES
D'INCELE N'UTILISER QUE DES FUSIBLE DE MEMO TYPE.

RISK OF FIRE-REPLACE FUSE AS MARKED.

"This symbol means fast operating fuse."

"Ce symbole représente un fusible à fusion rapide."

SPECIFICATIONS

| | | dB | 0 | 0 ± 6.0 |

<Hi-Fi AUDIO>

All items are measured across 8W resistor at speaker output terminal.

| Description | Condition | Unit | Nominal | Limit |
|-------------------------|---------------------------|------|--------------|--------------------------|
| 1. Audio Distortion | (R/P) | % | 0.5 | 1.0 |
| 2. Audio Freq. Response | 20Hz (R/P) 20kHz (R/P) | dB | -2.0 -2.0 | -2.0 ± 2.0 -2.0 ± 4.0 |
| 3. Separation | 20% DEV. 300Hz, 3kHz | dB | 20 | 15 |

Note:

Nominal specifications represent the design specifications. All units should be able to approximate these. Some will exceed and some may drop slightly below these specifications. Limit specifications represent the absolute worst condition that still might be considered acceptable. In no case should a unit fail to meet limit specifications.

IMPORTANT SAFETY PRECAUTIONS

Prior to shipment from the factory, our products have been carefully inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

Safety Precautions for TV Circuit

1. Before returning an instrument to the customer,

always make a safety check of the entire instrument, including, but not limited to, the following items:

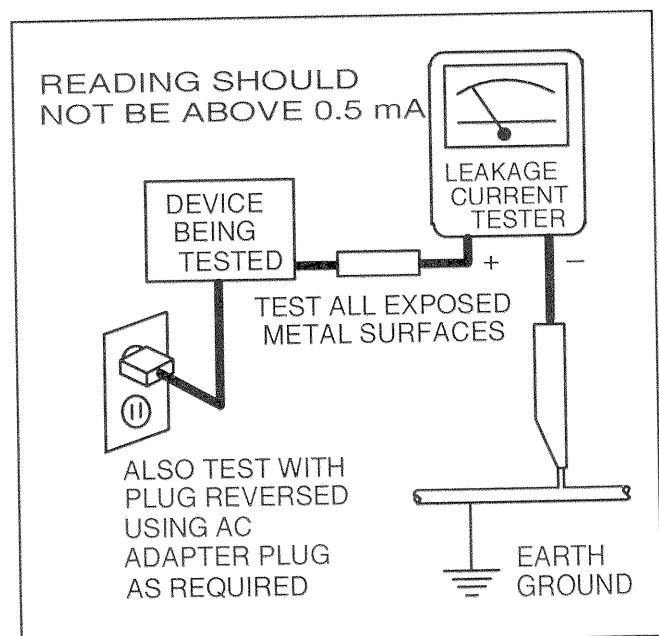

a. Be sure that no built-in protective devices are defective and have been defeated during servicing. (1) Protective shields are provided on this chassis to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience. (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including but not limited to, nonmetallic control knobs, insulating materials, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. **Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning. Servicers who defeat safety features or fail to perform safety checks may be liable for any resulting damage.**

b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to, (1) spacing between the picture tube and the cabinet mask, (2) excessively wide cabinet ventilation slots, and (3) an improperly fitted and/or incorrectly secured cabinet back cover.

c. **Antenna Cold Check** - With the instrument AC plug removed from any AC source, connect an electrical jumper across the two AC plug prongs. Place the instrument AC switch in the on position. Connect one lead of an ohm-meter to the AC plug prongs tied together and touch the other ohmmeter lead in turn to each tuner antenna input exposed terminal screw and, if applicable, to the coaxial connector. If the measured resistance is less than 1.0 megohm or greater than 5.2 megohm, an abnormality exists that must be corrected before the instrument is returned to the

customer. Repeat this test with the instrument AC switch in the off position.

d. **Leakage Current Hot Check** - With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.1 Leakage Current for Appliances and Underwriters Laboratories (UL) 1410, (50.7). With the instrument AC switch first in the on position and then in the off position, measure from a known earth ground (metal water pipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle brackets, metal cabinet, screw heads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.5 milli-ampere. Reverse the instrument power cord plug in the outlet and repeat the test.

ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE

ELIMINATED BEFORE RETURNING THE INSTRUMENT TO THE CUSTOMER OR BEFORE CONNECTING THE ANTENNA OR ACCESSORIES.

e. X-Radiation and High Voltage Limits - Because the picture tube is the primary potential source of X-radiation in solid-state TV receivers, it is specially constructed to prohibit X-radiation emissions. For continued X-radiation protection, the replacement picture tube must be the same type as the original. Also, because the picture tube shields and mounting hardware perform an X-radiation protection function, they must be correctly in place. High voltage must be measured each time servicing is performed that involves B+, horizontal deflection or high voltage. Correct operation of the X-radiation protection circuits also must be checked each time they are serviced. (X-radiation protection circuits also may be called "horizontal disable" or "hold down.") Read and apply the high voltage limits and, if the chassis is so equipped, the X-radiation protection circuit specifications given on instrument labels and in the Product Safety & X-Radiation Warning note on the service data chassis schematic. High voltage is maintained within specified limits by close tolerance safety-related components/adjustments in the high-voltage circuit. If high voltage exceeds specified limits, check each component specified on the chassis schematic and take corrective action.

2. Read and comply with all caution and safety-related notes on or inside the receiver cabinet, on the receiver chassis, or on the picture tube.

3. Design Alteration Warning - Do not alter or add to the mechanical or electrical design of this TV receiver. Design alterations and additions, including, but not limited to circuit modifications and the addition of items such as auxiliary audio and/or video output connections, might alter the safety characteristics of this receiver and create a hazard to the user. Any design alterations or additions will void the manufacturer's warranty and may make you, the servicer, responsible for personal injury or property damage resulting therefrom.

4. Picture Tube Implosion Protection Warning - The picture tube in this receiver employs integral implosion protection. For continued implosion protection, replace the picture tube only with one of the same type number. Do not remove, install, or otherwise handle the picture tube in any manner without

first putting on shatterproof goggles equipped with side shields. People not so equipped must be kept safely away while picture tubes are handled. Keep the picture tube away from your body. Do not handle the picture tube by its neck. Some "in-line" picture tubes are equipped with a permanently attached deflection yoke; because of potential hazard, do not try to remove such "permanently attached" yokes from the picture tube.

5. Hot Chassis Warning -

a. Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord and may be safety-serviced without an isolation transformer only if the AC power plug is inserted so that the chassis is connected to the ground side of the AC power source. To confirm that the AC power plug is inserted correctly, with an AC voltmeter, measure between the chassis and a known earth ground. If a voltage reading in excess of 1.0V is obtained, remove and reinsert the AC power plug in the opposite polarity and again measure the voltage potential between the chassis and a known earth ground.

b. Some TV receiver chassis normally have 85V AC(RS) between chassis and earth ground regardless of the AC plug polarity. This chassis can be safety-serviced only with an isolation transformer inserted in the power line between the receiver and the AC power source, for both personnel and test equipment protection.

c. Some TV receiver chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the AC power line. The two ground systems are electrically separated by insulation material that must not be defeated or altered.

6. Observe original lead dress. Take extra care to assure correct lead dress in the following areas: a. near sharp edges, b. near thermally hot parts-be sure that leads and components do not touch thermally hot parts, c. the AC supply, d. high voltage, and e. antenna wiring. Always inspect in all areas for pinched, out of place, or frayed wiring. Check AC power cord for damage.

7. Components, parts, and/or wiring that appear to have overheated or are otherwise damaged should be replaced with components, parts, or wiring that meet original specifications. Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.

8. Product Safety Notice - Some electrical and me-

chanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc.. Parts that have special safety characteristics are identified by a (▲) on schematics and in parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire, and/or other hazards.

The Product's Safety is under review continuously and new instructions are issued whenever appropriate. Prior to shipment from the factory, our products are carefully inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

Precautions during Servicing

- A.** Parts identified by the (▲) symbol are critical for safety.
Replace only with part number specified.
- B.** In addition to safety, other parts and assemblies are specified for conformance with regulations applying to spurious radiation. These must also be replaced only with specified replacements.
Examples: RF converters, RF cables, noise blocking capacitors, and noise blocking filters, etc.
- C.** Use specified internal wiring. Note especially:
 - 1) Wires covered with PVC tubing
 - 2) Double insulated wires
 - 3) High voltage leads
- D.** Use specified insulating materials for hazardous live parts. Note especially:
 - 1) Insulation Tape
 - 2) PVC tubing
 - 3) Spacers
 - 4) Insulators for transistors.
- E.** When replacing AC primary side components (transformers, power cord, etc.), wrap ends of wires securely about the terminals before soldering.
- F.** Observe that the wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)
- G.** Check that replaced wires do not contact sharp edged or pointed parts.

H. When a power cord has been replaced, check that 10-15 kg of force in any direction will not loosen it.

- I.** Also check areas surrounding repaired locations.
- J.** Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

K. Crimp type wire connector

When replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, in order to prevent shock hazards, perform carefully and precisely the following steps:

Replacement procedure

- 1) Remove the old connector by cutting the wires at a point close to the connector.

Important: Do not re-use a connector. Discard it.

- 2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.
- 3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.
- 4) Use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

- L.** When connecting or disconnecting the VCR connectors, first, disconnect the AC plug from AC supply socket.

Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and check the specified values in order to verify compliance with safety standards.

1. Clearance Distance

When replacing primary circuit components, check specified clearance distance (d) and (d') between soldered terminals, and between terminals and surrounding metallic parts. (See Fig. 1)

Table 1 : Ratings for selected area

| AC Line Voltage | Region | Clearance Distance (d) (d') |
|-----------------|---------------|---------------------------------|
| 110 to 130 V | USA or CANADA | ≥ 3.2 mm (0.126 inches) |

Note: This table is unofficial and for reference only.
Be sure to check the precise values.

2. Leakage Current Test

Check specified (or lower) leakage current between B (earth ground, power cord plug prongs) and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method : (Power ON)

Insert load Z between B (earth ground, power cord plug prongs) and exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See Fig. 2 and following table.

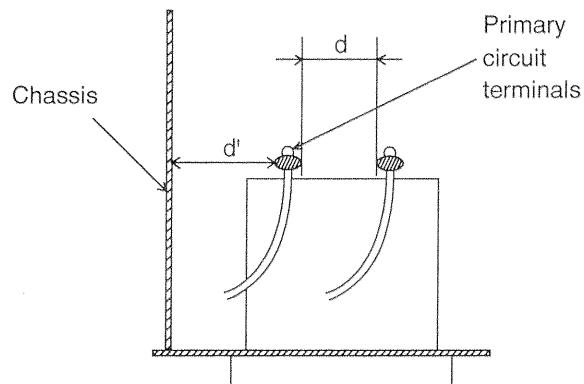

Fig. 1

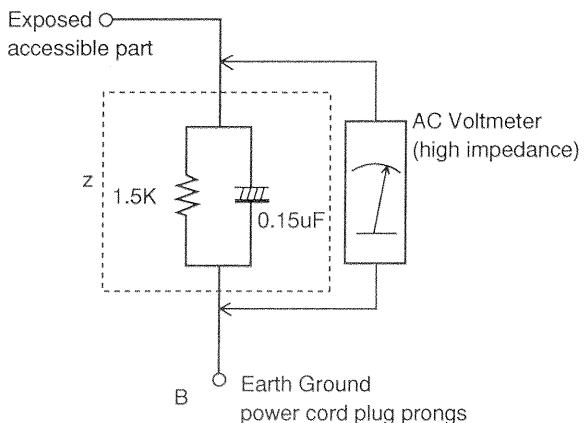

Fig. 2

Table 2 : Leakage current ratings for selected areas

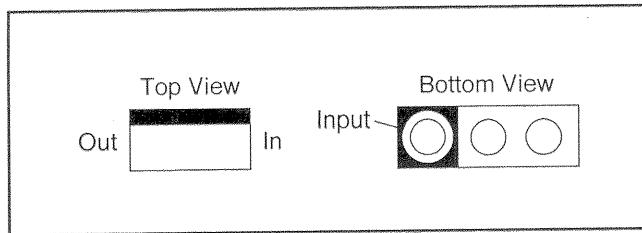

| AC Line Voltage | Region | Load Z | Leakage Current (i) | Earth Ground (B) to: |
|-----------------|--------|--|---------------------|--------------------------|
| 110 to 130 V | USA | 0.15 μ F CAP. & 1.5k Ω RES. connected in parallel | $i \leq 0.5$ mA rms | Exposed accessible parts |

Note: This table is unofficial and for reference only.
Be sure to check the precise values.

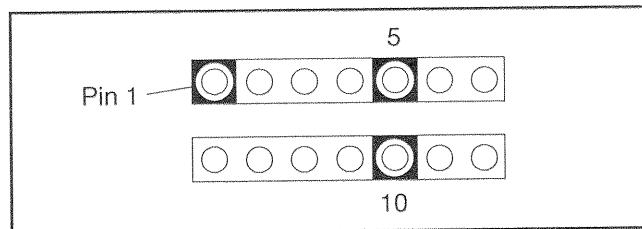

STANDARD NOTES FOR SERVICING

Circuit Board Indications

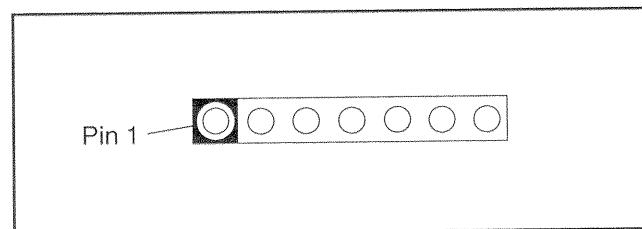

1. The output pin of the 3 pin Regulator ICs is indicated as shown:

2. For other ICs, pin 1 and every 5th pin are indicated as shown:

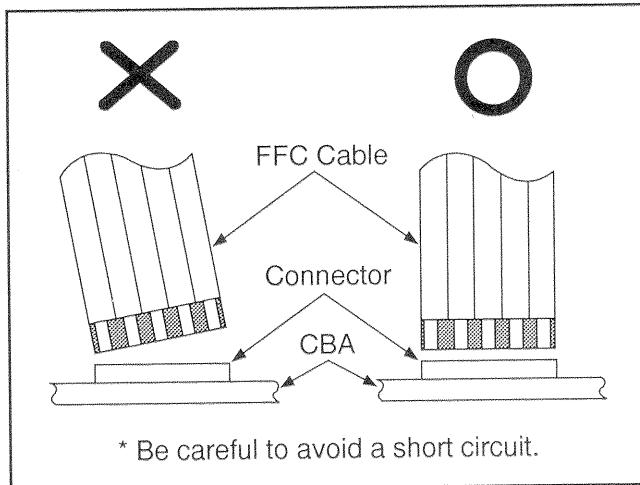

3. The 1st pin of every pin connector are indicated as shown:

Instructions for Connectors

1. When you connect or disconnect FFC cable (connector), be sure to disconnect the AC cord.
2. FFC cable (connector) should be inserted parallel into the connector, not at an angle.

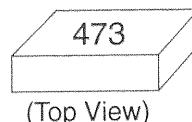

[CBA= Circuit Board Assembly]

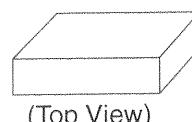

How to Read the Values of the Rectangular Type Chip Components

Example:

- Resistor

= 473 = 47 [kΩ]

- Capacitor

= Not Shown

Caution:

Once chip parts (Resistors, Capacitors, Transistors, etc.) are removed, they must not be reused. Always use a new part.

Replacement Procedures for Leadless (Chip) Components

The Following Procedures are Recommended for the Replacement of the Leadless Components Used in this Unit.

1. Preparation for replacement

- Soldering Iron

Use a pencil-type soldering iron (less than 30 watts).

- Solder

Eutectic solder (Tin 63%, Lead 37%) is recommended.

- Soldering time

Do not apply heat for more than 4 seconds.

- Preheating

Leadless capacitor must be preheated before installation. (130°C~150°C, for about two minutes.)

Notes:

- Leadless components must not be reused after removal.
- Excessive mechanical stress and rubbing for the component electrode must be avoided.

2. Removing the leadless component

Grasp the leadless component body with tweezers and alternately apply heat to both electrodes. When the solder on both electrodes has melted, remove leadless component with a twisting motion.

Notes:

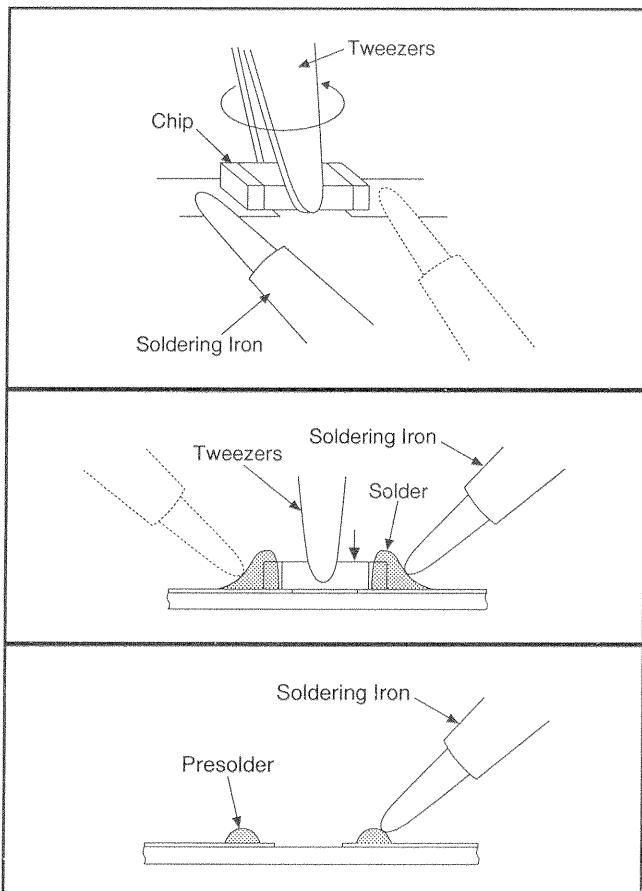

- a. Do not attempt to lift the component off the board until the component is completely disconnected from the board by the twisting action.
- b. Take care not to break the copper foil on the printed board.

3. Installing the leadless component

- a. Presolder the contact points of the circuit board.
- b. Press the part downward with tweezers and solder both electrodes as shown below.

Note:

Do not glue the replacement leadless component to the circuit board.

How to Remove / Install Flat Pack IC

Caution:

1. Do not apply the hot air to the chip parts around the Flat Pack-IC for over 6 seconds as damage may occur to the chip parts. Put Masking Tape around the Flat Pack-IC to protect other parts from damage. (Fig. S-1-2)
2. The Flat Pack-IC on the CBA is affixed with glue, so be careful not to break or damage the foil of each pin or solder lands under the IC when removing it.

1. Removal

With Hot - Air Flat Pack - IC Desoldering Machine:

- a. Prepare the Hot - Air Flat Pack - IC Desoldering Machine, then apply hot air to Flat Pack - IC (about 5~6 seconds). (Fig. S-1-1)
- b. Remove the Flat Pack- IC with tweezers while applying the hot air.

With Soldering Iron:

- a. Using desoldering braid, remove the solder from all pins of the Flat Pack - IC. When you use solder flux which is applied to all pins of the Flat Pack - IC, you can remove it easily. (Fig. S-1-3)
- b. Lift each lead of the Flat Pack - IC upward one by one, using a sharp pin or wire to which solder will not adhere (iron wire). When heating the pins, use a fine tip soldering iron or a hot air Desoldering Machine. (Fig. S-1-4)

With Iron Wire:

- a. Using desoldering braid, remove the solder from all pins of the Flat Pack - IC. When you use solder flux which is applied to all pins of the Flat Pack - IC, you can remove it easily. (Fig. S-1-3)
- b. Affix the wire to a workbench or solid mounting point, as shown in Fig. S-1-5.
- c. Pull up on the wire as the solder melts so as to lift the IC leads from the CBA contact pads, while heating the pins using a fine tip soldering iron or hot air blower.

Note:

When using a soldering iron, care must be taken to ensure that the Flat Pack - IC is not being held by glue, or when it is removed from the CBA, it may be damaged if force is used.

2. Installation

- a. Using desoldering braid, remove the solder from the foil of each pin of the Flat Pack - IC on the CBA, so you can install a replacement Flat Pack - IC more easily.
- b. The "●" mark on the Flat Pack - IC indicates pin 1 (See Fig. S-1-6). Make sure this mark matches the 1 on the CBA when positioning for installation. Then pre - solder the four corners of the Flat Pack- IC (See Fig. S-1-7).
- c. Solder all pins of the Flat Pack - IC. Make sure that none of the pins have solder bridges.

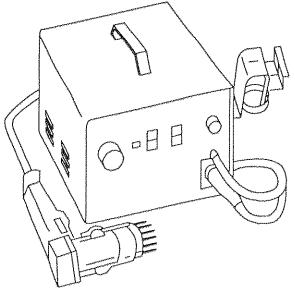

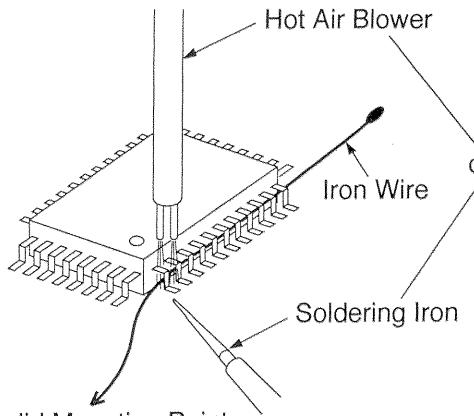

Fig. S-1-1

To Solid Mounting Point

Fig. S-1-5

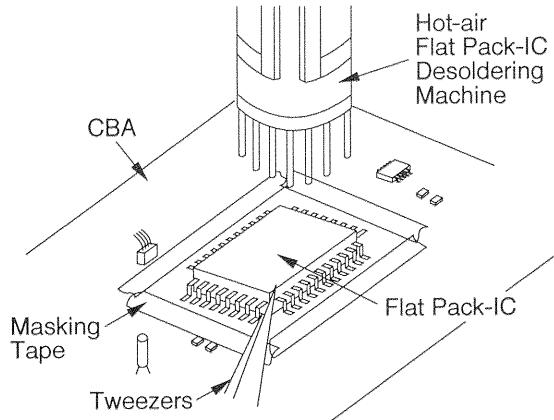

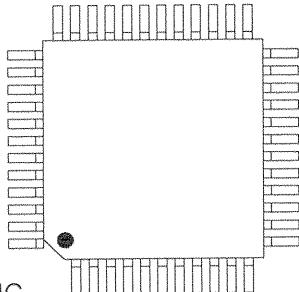

Fig. S-1-2

Example :

Pin 1 of the Flat Pack-IC
is indicated by a "●" mark.

Fig. S-1-4

Instructions for Handling Semiconductors

Electrostatic breakdown of the semiconductors may occur due to a potential difference caused by electrostatic charge during unpacking or repair work.

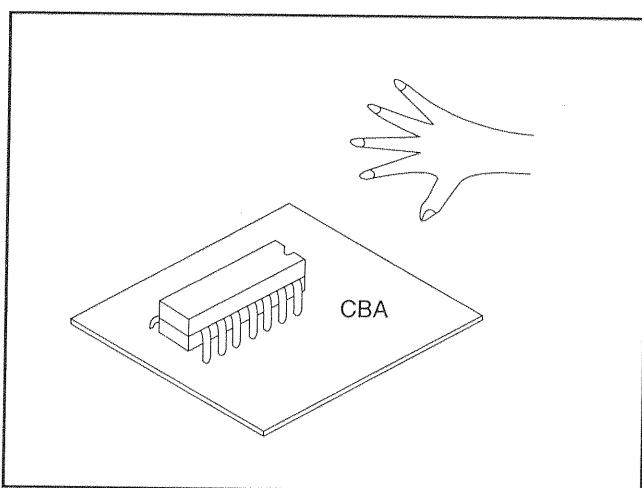

Ground for Human Body

Be sure to wear a grounding band ($1M\Omega$) that is properly grounded to remove any static electricity that may be charged on the body.

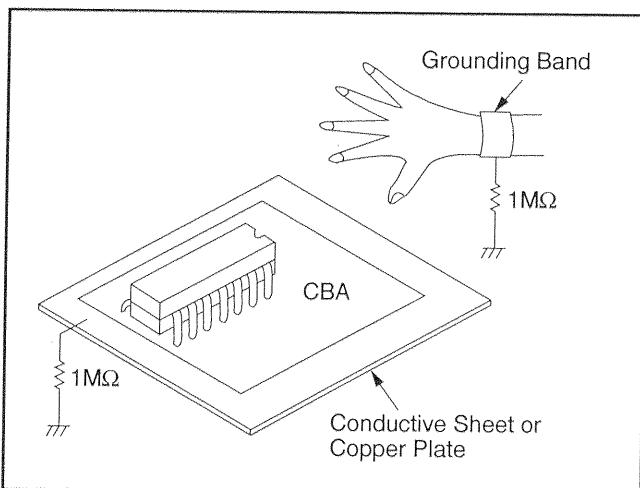

Ground for Work Bench

Be sure to place a conductive sheet or copper plate with proper grounding ($1M\Omega$) on the work bench or other surface, where the semiconductors are to be placed. Because the static electricity charge on the clothing will not escape through the body grounding band, be careful to avoid contacting semiconductors to clothing.

Incorrect

Correct

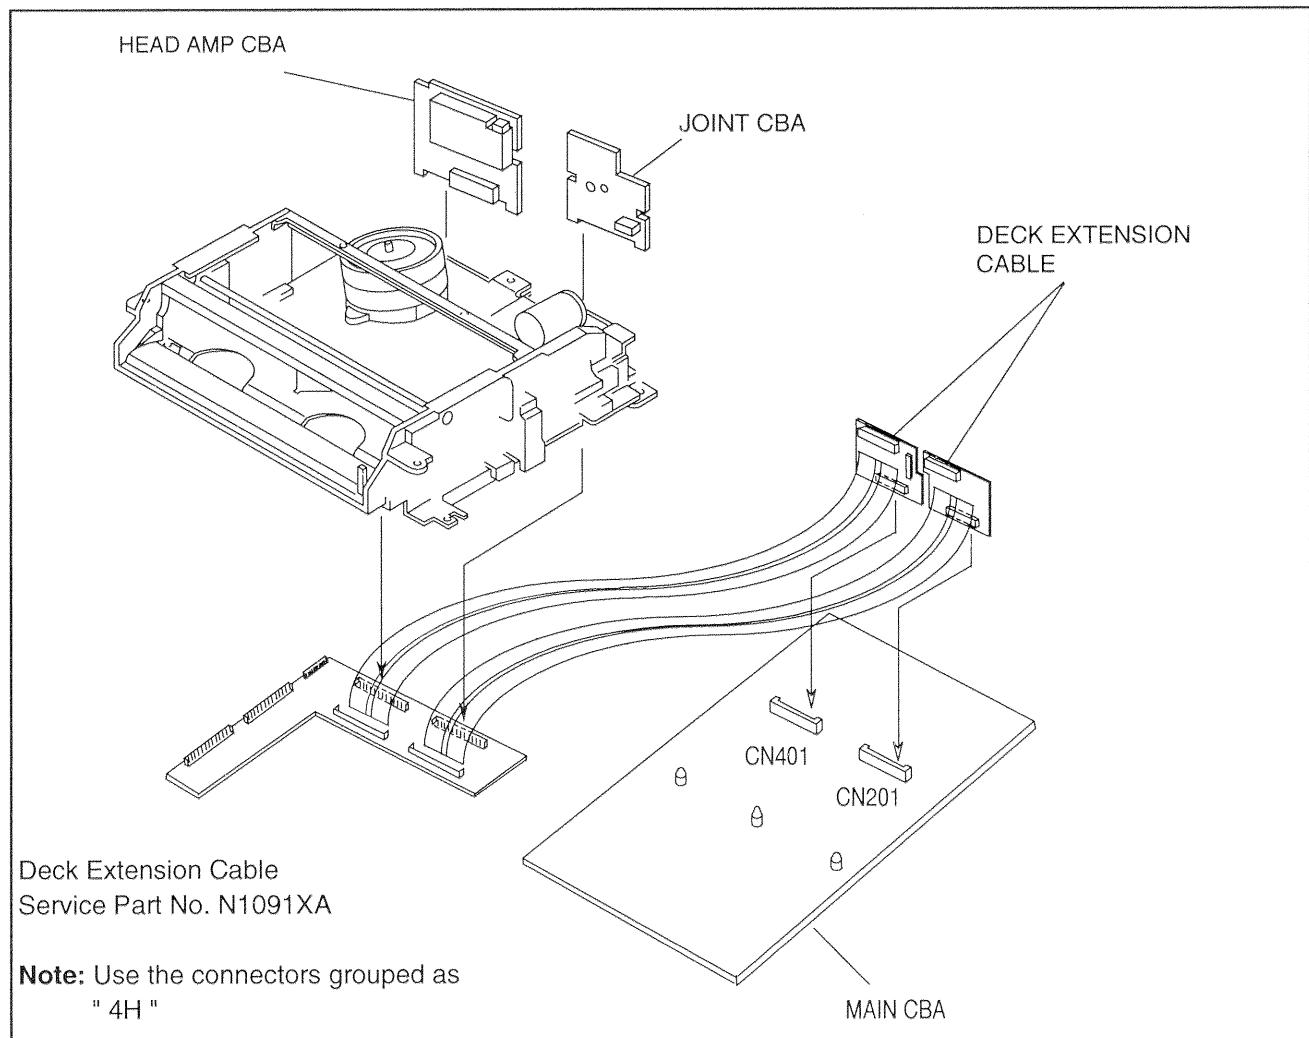

PREPARATION FOR SERVICING

How to Use Service Fixture

- (1) Remove Deck Mechanism Assembly.
If needed, remove VCR CBA from chassis.
- (2) Connect Deck Mechanism Assembly and VCR CBA by using the deck extension cable.

Note:

The deck extension cable can be used for both 4-head models and 2-head models.
Be sure to use correct connectors as specified.

How to Enter the Service Mode

Caution: 1

- Optical sensor system is used for Tape Start and End Sensor on this equipment. Read this page carefully and prepare as described on this page before starting to service: otherwise, the unit may operate unexpectedly.

Preparing: 1

- Cover Q206 (START SENSOR) and Q205 (END SENSOR) with Insulation Tape or enter the service mode to activate Sensor Inhibition automatically.

Note: Avoid playing, rewinding or fast forwarding the tape to its beginning or end, because both Tape End Sensors are not active.

How to Enter the Service Mode

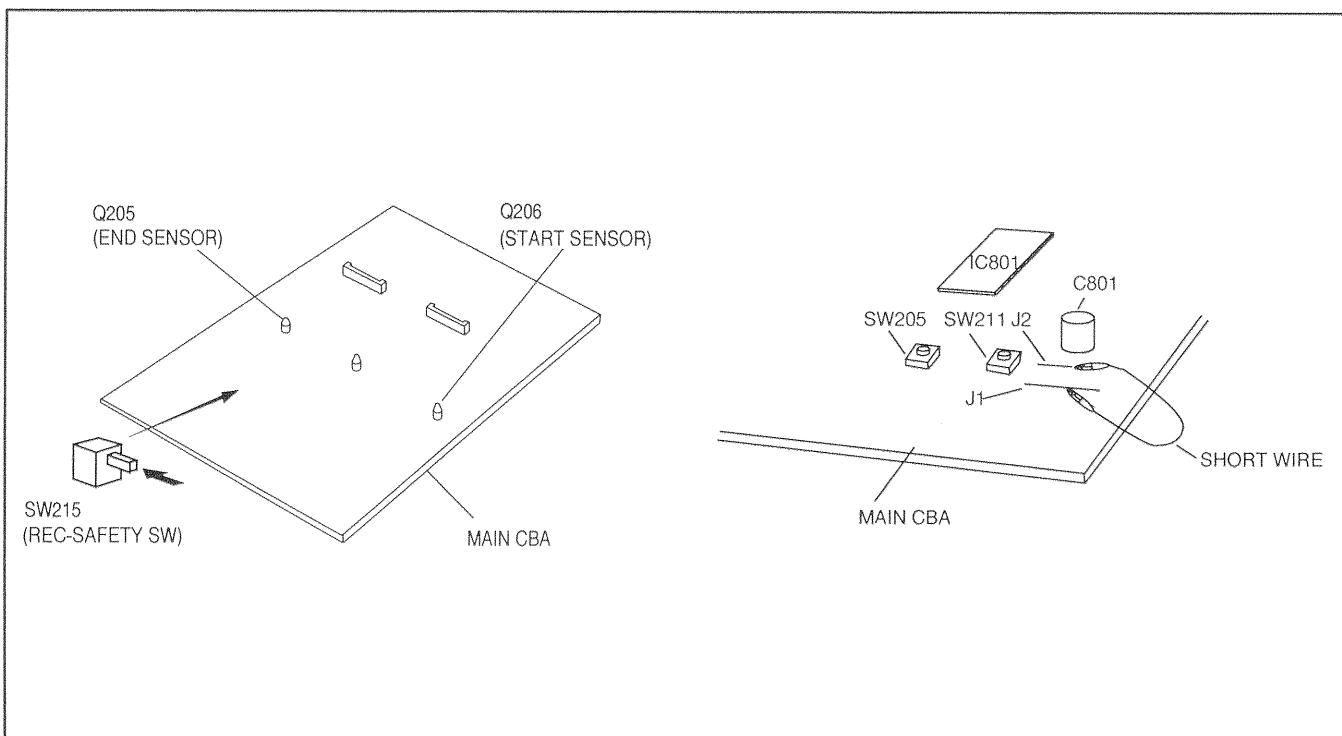

- Connect unit to an AC Outlet.
- Turn Power On.
- If - LANGUAGE SELECT - appears on the screen, Turn power off and on again.
- Make a momentary connection (1/2 second) between J1 and J2. (Located on the Main CBA.)
- Press No. 1 button on the Remote control unit for Cut-off adjustment.
Note: On this Service Mode, TV Screen shows only a Horizontal line.
- Press No. 2 button on the Remote control unit for AGC adjustment.

Caution: 2

- The deck mechanism assembly is mounted on the Main CBA directly, and SW215 (REC-SAFETY SW) is mounted on the Main CBA. When deck mechanism assembly is removed from the Main CBA due to servicing, this switch can not be operated automatically.

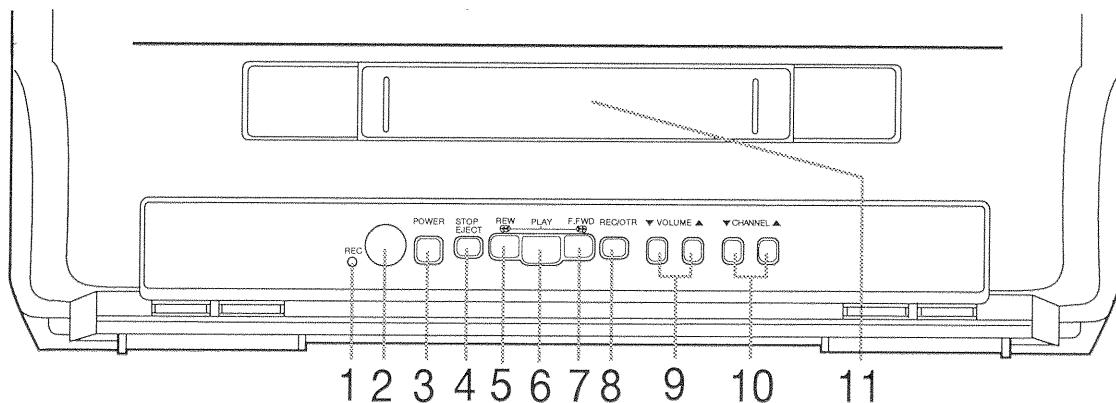

Preparing: 2

- To eject the tape, press the STOP/EJECT Button on the unit (or Remote control).
- When you want to record during the Service mode, press the Rec Button while depressing the SW215 (REC-SAFETY SW) on the Main CBA.

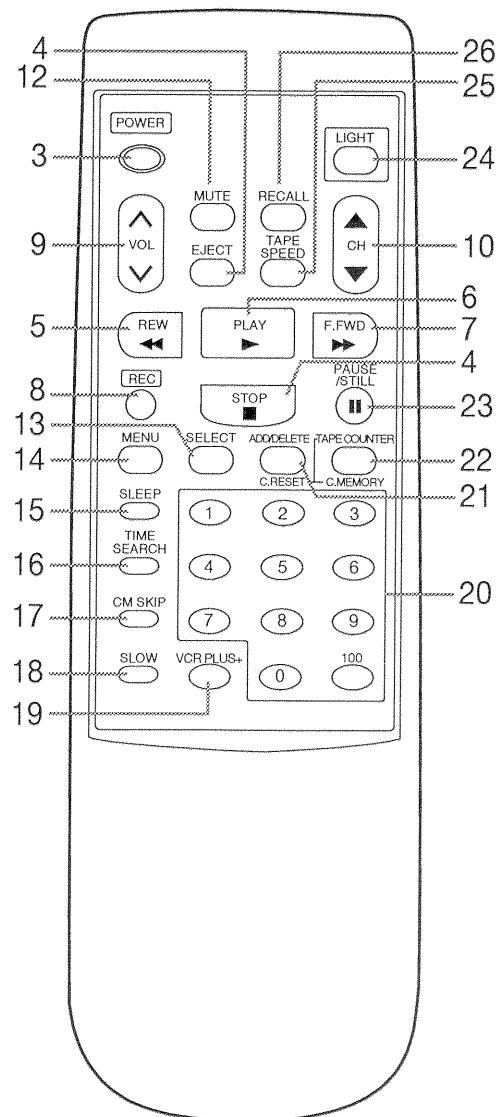

OPERATING CONTROLS AND FUNCTIONS

- FRONT VIEW -

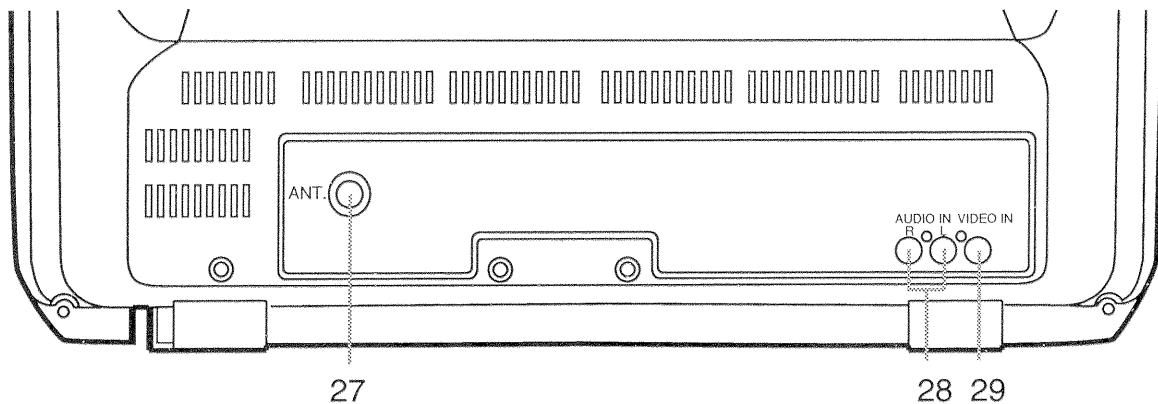

- REMOTE CONTROL VIEW -

- 1 **REC indicator**—Flashes during recording. Lights up in the Stand-by mode for Timer Recording.
- 2 **Remote sensor window**—Receives the infrared signals from the remote control.
- 3 **POWER button**—Press to turn TV/VCR on and off. Press to activate the automatic timer recording.
- 4 **STOP button** Press to stop the tape motion.
EJECT button—Press in the Stop mode to remove a tape from the TV/VCR.
- 5 **REW button**—Press to rewind the tape, or to view the picture rapidly in reverse during the Play mode. (Rewind Search)
- 6 **PLAY button**—Press to begin playback of a tape.
- 7 **F.FWD button**—Press to rapidly advance the tape, or to view the picture rapidly in forward during the Play mode. (Forward Search)
- 8 **REC button**—Press to begin manual recording.
OTR button—Press to activate One Touch Recording. (used on the TV/VCR only)
- 9 **VOLUME ▲/▼ buttons**—Press to adjust the volume level.
- 10 **CHANNEL ▲/▼ buttons**—Press to select the channel for viewing or recording.
PICTURE CONTROL function—They may also be used to adjust the picture control.
TRACKING +/- function—Press to minimize video ‘noise’ (lines or dots on screen) during the Play mode.
- 11 **Cassette compartment**

- REAR VIEW -

- 12 MUTE button**— Press to mute sound. Press it again to resume sound.
- 13 SELECT button**— When setting program (for example: setting clock or timer program), press to determine your selection and proceed to the next step you want to input.
Display function— Press to display the counter or the current channel number and current time on the TV screen.
- 14 MENU button**— Press to display main menu on the TV screen.
- 15 SLEEP button**— Press to set the Sleep Timer.
- 16 TIME SEARCH button**— Press to activate Time Search mode.
- 17 CM SKIP button**— Press to skip a commercial range of playing tape.
- 18 SLOW button**— Press to reduce the playback speed.
- 19 VCR PLUS+ button**— Press to activate the VCR Plus function.
- 20 Number buttons**— Press to select desired channels, for viewing or recording. To select channels 1 to 9, first press the 0 button and then 1 to 9.
+100 button— Press to select cable channels which are equal or greater than number 100. (To select channel 125, first press "+100" button then press "2" and "5").
- 21 ADD/DELETE button**— Press to delete or add channel numbers in the Channel Set Up mode (See page 14). Press to cancel a setting program (for example: setting clock or timer program)
(These functions are operative only when the menu is shown on the TV screen.)
TAPE COUNTER RESET button— Press to reset counter to 0:00:00.
- 22 TAPE COUNTER MEMORY button**— Press to set counter memory on and off.
- 23 PAUSE/STILL button**— Press to temporarily stop the tape during the recording or to view a still picture during playback.
Frame Advance Function— Press to advance the picture by one frame during the Still mode.
- 24 LIGHT button**— Press to light up buttons. If it is dark, white buttons are lighted up to show these position.
- 25 TAPE SPEED button**— Press to set desired recording speed. (SP/LP/SLP)
- 26 RECALL button**— Press to go back to the previously viewed channel. For example, pressing this button once will change channel display from 3 (present channel) to 10 (previously viewed channel), and pressing it a second time will return from 10 to 3.
- 27 ANT. terminal**— Connect to an antenna or CATV.
- 28 AUDIO input jack**— Connect to audio output jack of your audio equipment or another VCR.
- 29 VIDEO input jack**— Connect to video output jack of your video camera or another VCR.

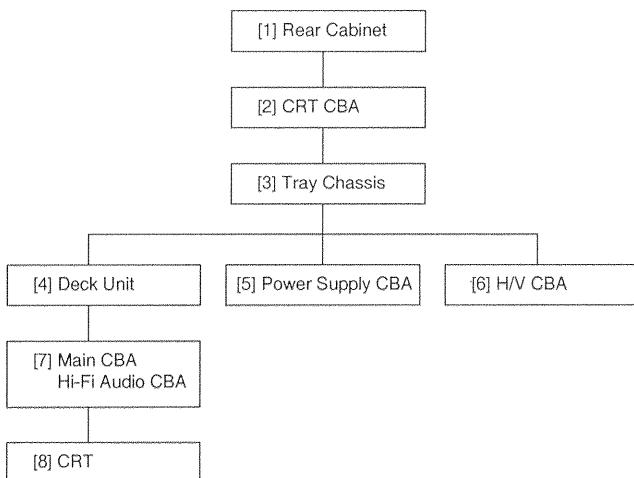

DISASSEMBLY INSTRUCTIONS

1. Disassembly Flowchart

This flowchart indicates the disassembly steps for the cabinet parts, and the CBA in order to gain access to item(s) to be serviced. When reassembling, follow the steps in reverse order. Bend, route and dress the cables as they were.

Caution !!

When removing the CRT, be sure to discharge the Anode Lead of the CRT with the CRT Ground Wire before removing the Anode Cap.

2. Disassembly Method

| STEP/ LOC. NO. | PART | REMOVAL | | |
|----------------------|-----------------------------|-------------|--|------|
| | | FIG. NO. | REMOVE/*UNLOCK/ RELEASE/UNPLUG/ UNCLAMP/DESOLDER | NOTE |

Note :

- ① Order of steps in Procedure. When reassembling, follow the steps in reverse order.
These numbers are also used as the identification (location) No. of parts in Figures.
- ② Parts to be removed or installed.
- ③ Fig. No. showing Procedure of Part Location
- ④ Identification of part to be removed, unhooked, unlocked, released, unplugged, unclamped, or desoldered.
S=Screw, P=Spring, L=Locking Tab, CN=Connector, *=Unhook, Unlock, Release, Unplug, or Desolder
2(S-2) = two Screw (S-2)
- ⑤ Refer to the following "Reference Notes in the Table" following.

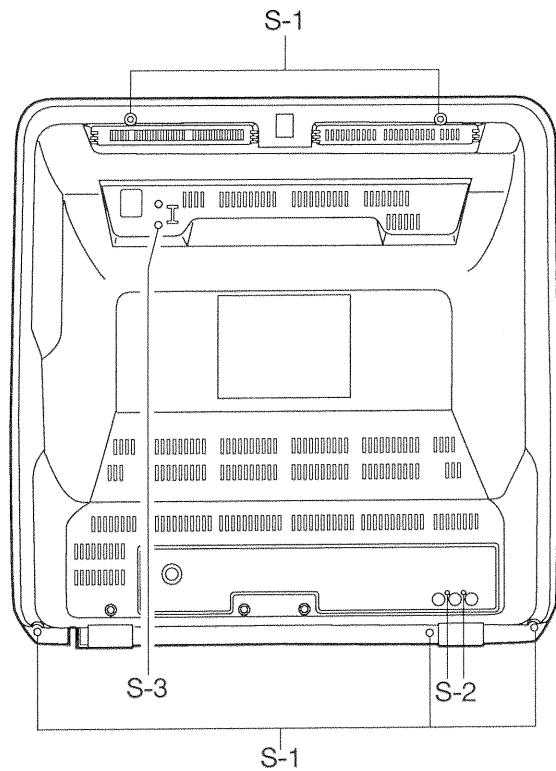

Reference Notes in the Table

1. Remove Screws 5(S-1), 3(S-2) and 1(S-3).

Caution !!

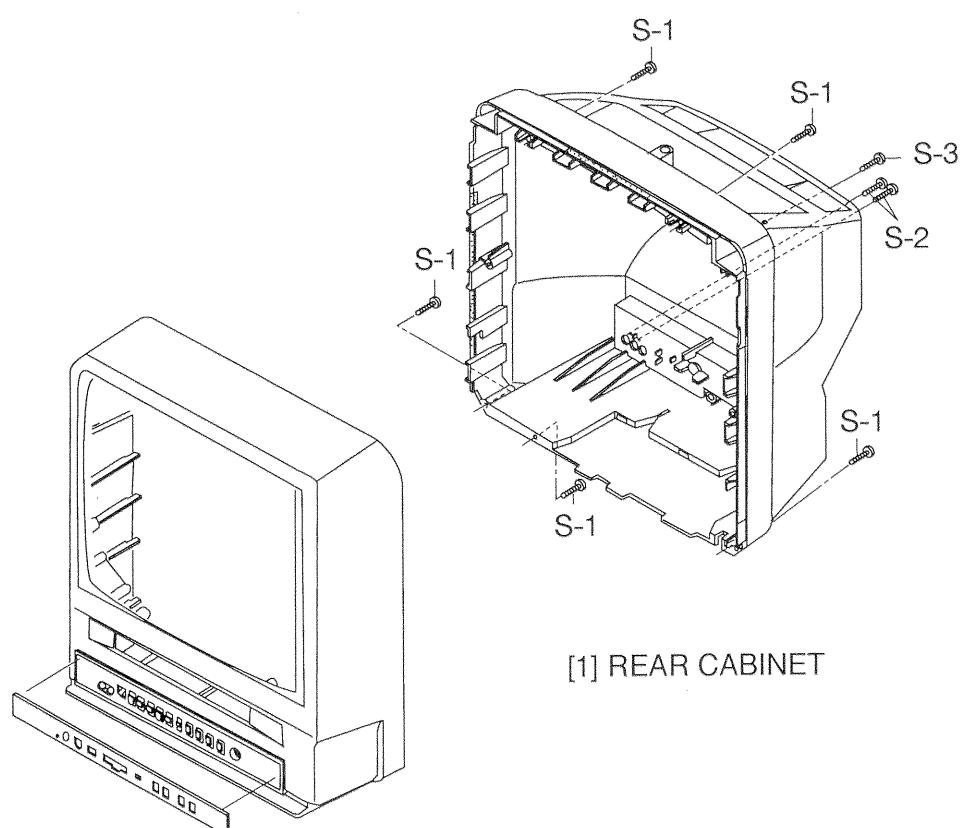

Discharge the Anode Lead of the CRT with the CRT Ground Wire before removing the Anode Cap.

2. If not already removed, first remove the Rear Cabinet. Remove CRT Ground Wire CN503 on the CRT CBA, CN575,CN602 with coupling CBA. then pull the CRT CBA backward.
3. If not already removed, first remove the Rear Cabinet. Remove Screw 1(S-4) and CN801. Pull the Tray Chassis backward.
4. If not already removed, first remove the Rear Cabinet and remove Tray Chassis. Remove Screws 5(S-5), 2(S-6). Lift up the Deck unit. Careful for the clearance.
5. If not already removed, first remove the Rear Cabinet. and remove Tray Chassis. Remove CN601. Remove Screw 2(S-7) . Release Locking Tab 3(L-1) and Pull the Power Supply CBA backward.
6. If not already removed, first remove the Rear Cabinet. and remove Tray Chassis. Slide H/V CBA Holder backward. Remove Screws 2(S-8). If necessary Remove Anode Cap.
7. If not already removed, first remove the Rear Cabinet. and remove Tray Chassis. Remove Screw (S-9) and Pull up the Main CBA. For Hi-Fi Audio CBA, Remove CN403, CN904 and CN906.Then Just pull it away from the cabinet.
8. If not already removed, first remove the Rear Cabinet. and remove Tray Chassis. Remove Screws 4(S-10) and Pull the CRT backward.

ELECTRICAL ADJUSTMENT INSTRUCTIONS

General Note:

"CBA" is abbreviation for "Circuit Board Assembly".

NOTE:

Electrical adjustments are required after replacing circuit components and certain mechanical parts.

It is important to perform these adjustments only after all repairs and replacements have been completed.

Also, do not attempt these adjustments unless the proper equipment is available.

Test Equipment Required

1. NTSC Pattern Generator (Color Bar W/White Window, Red color, Dot Pattern, Gray Scale, Mroscope Multi-Burst)
2. USA TV Multi Channel Sound Generator
3. Alignment Tape (FL8A, FL8N, F8-G/M), Blank Tape (Available Locally)
4. DC Voltmeter
5. Oscilloscope: Dual-trace with 10:1 probe, V-Range: 0.001~50V/Div, F-Range: DC~AC-60MHz
6. Frequency Counter
7. Plastic Tip Driver
8. TV Modulator
9. TV Up Converter

1. DC 112V Adjustment

Purpose: To obtain correct operation.

Symptom of Misadjustment: The picture is dark and unit does not operate correctly.

| Test Point | Adjustment Point | Mode | Input |
|----------------------------|-----------------------|--------------|-------|
| J608 (+112V) J607 (GND) | VR601 | --- | --- |
| Tape | Measurement Equipment | Spec. | |
| --- | DC Voltmeter | DC +112±0.5V | |

Note: J608, J607(GND), VR601

--- Power Supply CBA

1. Connect DC Volt Meter to J608 and J607(GND).
2. Adjust VR601 so that the voltage of J608 becomes DC +112±0.5V.

2. AFT Adjustment

Purpose: To operate AFT correctly.

Symptom of Misadjustment: AFT does not work correctly and/or synchronization is faulty.

| Test Point | Adjustment Point | Mode | Input |
|--------------------------|-------------------------------|--------------|---------------|
| J252 (AFT) J213 (GND) | T301 (VCO) | --- | See Direction |
| Tape | Measurement Equipment | Spec. | |
| --- | Oscilloscope or DC Volt Meter | DC +4.2±0.1V | |

Figure

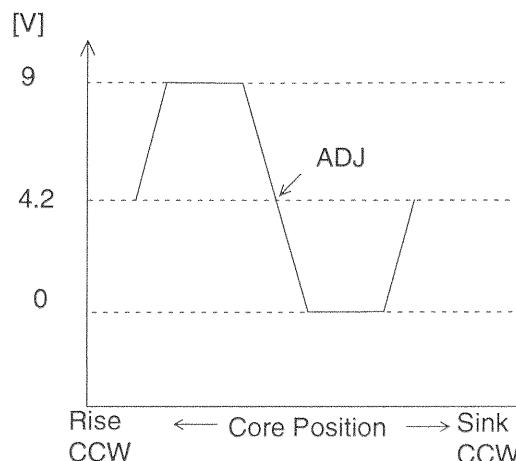

Fig.1

Note: J252, J213(GND), T301 --- Main CBA

1. Disconnect the RF input and Set the unit to Channel 4.
2. Reconnect the RF input. Input Color Bar signal.
3. Turn the core of T301 fully counterclockwise.
4. Turn the core of T301 clockwise and find the point where the voltage drops from approximately 9V to 0V immediately on the oscilloscope. (J252)
5. Turn the core of T301 little by little and find the point where DC +4.2±0.1V is obtained between the area mentioned in step 3.

3. AGC Adjustment

Purpose: Set AGC (Auto Gain Control) Level.

Symptom of Misadjustment: AGC does not synchronize correctly when RF input level is too weak and picture distortion may occur if it is too strong.

| Test Point | Adjustment Point | Mode | Input |
|--------------------------------|--|---|---------------------------------------|
| J269 (AGC) J213 (GND) | CH. Up/Down Button (Remote Control Unit) | --- | Color Bar 67.25MHz 80dB μ V |
| Tape | Measurement Equipment | Spec. | |
| --- | Pattern Generator DC Volt Meter | DC +3.2(or 2.9) \pm 0.1V By Tuner Type | |

Note: J269, J213(GND) --- Main CBA

1. Enter the Service mode. (See Page 1-4-2) Then press number 2 button on the remote control unit.
2. Receive the Color Bar signal for channel 4 (67.25MHz). (RF Input Level: 80dB μ V)
3. Press the CH. Up/Down button so that the voltage at J269 is as follows:

| Installed Tuner Type in Unit | Adjusted DC Voltages |
|------------------------------|----------------------|
| TELH9-009A/012A/013A | DC +3.2 \pm 0.1V. |
| B8015AP | DC +2.9 \pm 0.1V. |

4. H. Shift Adjustment

Purpose: To get correct horizontal position and size of screen image.

Symptom of Misadjustment: Horizontal position and size of screen image may not be properly displayed.

| Test Point | Adjustment Point | Mode | Input |
|------------|--------------------------|-----------|-----------|
| --- | Screen | play | Monoscope |
| Tape | Measurement Equipment | Spec. | |
| --- | Pattern Generator | See below | |

1. Input the Monoscope Pattern.
2. Enter the Service mode. (See page 1-4-2) Then press number 4 button on the remote control unit.
3. Press CH. UP/DOWN Button so that the picture will stay on center.

5. V. Size Adjustment

Purpose: To obtain correct vertical width of screen image.

Symptom of Misadjustment: If V. Size is incorrect, vertical height of image on the screen may not be properly displayed.

| Test Point | Adjustment Point | Mode | Input |
|------------|--------------------------|-------------|-----------|
| --- | VR541 (V. Size) | Play | Monoscope |
| Tape | Measurement Equipment | Spec. | |
| --- | Pattern Generator | 90 \pm 5% | |

Note: VR541--- H/V CBA

1. Operate the unit for at least 20 minutes.
2. Input a Monoscope Pattern Signal.
3. Adjust VR541 so that the monoscope pattern will be 90 \pm 5% of display size and the circle is round.

Note: If you don't have Monoscope, play test tape (F8-G or F8-M)

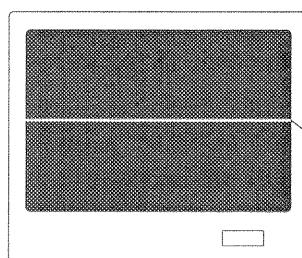

6. Cut-off Adjustment

Purpose: To adjust the beam current of R, G, B, and screen voltage.

Symptom of Misadjustment: White color may be reddish, greenish or bluish.

| Test Point | Adjustment Point | Mode | Input |
|------------|--|-------------------------|-------------------------------|
| --- | VR501 (R-Drive) VR502 (R-Cutoff) VR503 (G-Cutoff) VR504 (B-Drive) VR505 (B-Cutoff) Screen-Control | --- | White Raster (APL 100%) |
| Tape | Measurement Equipment | Spec. | |
| --- | Pattern Generator | See Reference below. | |

Figure

Using this line

Fig.2

Notes: VR501, VR502, VR503, VR504, VR505

--- CRT CBA

Screen Control --- H/V CBA

F.B.T= Fly Back Transformer

1. Degauss the CRT and allow CRT to operate for 20 minutes before starting the alignment.
2. Input a White Raster Test Signal (APL 100%).
3. Pre-set the Screen Control located on the FBT to minimum (Fully Counter Clock Wise).
4. Pre-set VR502 (R-Cutoff), VR503 (G-Cutoff), and VR505 (B-Cutoff) to the 10 o'clock position.
5. Pre-set VR504 (B-Drive) and VR501 (R-Drive) to their center positions.
6. Enter the Service Mode. (See page 1-4-2)
Then press the number 1 button on the Remote control unit.
7. Gradually turn the Screen Control (Clock Wise) until a horizontal line, of any color dimly appears.
8. Turn the Red,Blue or Green Cutoff controls up to achieve a "white" dim line.
9. Power off and power on again.

7. White Balance Adjustment

Note: The Cut-off Adjustment must be finished before making this adjustment.

Purpose:

To mix red, green and blue beams correctly for pure white.

Symptom of Misadjustment:

White becomes bluish or reddish.

| Test Point | Adjustment Point | Mode | Input |
|------------|--|------|----------------------------|
| --- | VR501 (R.DRIVE) VR504 (B.DRIVE) | --- | White Raster (APL 100%) |
| Tape | Measurement Equipment | | Spec. |
| --- | Pattern Generator | | See Reference Note below. |

Note: VR501, VR504 --- CRT CBA

1. Operate the unit for at least 20 minutes.
2. Face the unit to the east. Degauss the CRT using Degaussing Coil.
3. Input a White Raster signal (APL 100%)
4. Adjust VR501(R. DRIVE) and VR504(B. DRIVE) so that the White Raster is shown as Pure White.

Note:

Check that Cut Off Adj. is correct after this adjustment, and Repeat Cut Off Adj. if needed.

8. Sub-Brightness Adjustment

Purpose: To get proper brightness.

Symptom of Misadjustment: If Sub-Brightness is incorrect, proper brightness cannot be obtained by adjusting the Brightness Control.

| Test Point | Adjustment Point | Mode | Input |
|------------|-----------------------|------|--------------------------|
| --- | Screen Control | --- | Gray Scale |
| Tape | Measurement Equipment | | Spec. |
| --- | Pattern Generator | | See Reference Note Below |

Figure

Fig.3

Note: Screen Control --- H/V CBA

1. Operate the unit for at least 20 minutes.
2. Input a 8-step Gray Scale Signal.
3. Adjust Screen Control so that the 2nd bar is just visible (See above figure).

9. Focus Adjustment

Purpose: Set the optimum Focus.

Symptom of Misadjustment: If Focus Adjustment is incorrect, blurred images are shown on the display.

| Test Point | Adjustment Point | Mode | Input |
|------------|-----------------------|------|------------|
| --- | Focus Control | --- | Monoscope |
| Tape | Measurement Equipment | | Spec. |
| --- | Pattern Generator | | See below. |

Note: Focus Control (FBT) --- H/V CBA

FBT= Fly Back Transformer

1. Operate the unit more than 30 minutes
2. Degauss the CRT using Degaussing Coil and Face the unit to the East.
3. Input a Monoscope Pattern Signal.
4. Adjust the Focus Control on the FBT to obtain clear picture.

10. Head Switching Position Adjustment

Purpose: Determine the Head Switching Point during Play back.

Symptom of Misadjustment: May cause Head Switching Noise or Vertical Jitter in the picture.

Note: Unit reads Head Switching Position automatically and display it on the screen.

1. Play back test tape (FL8A) and Enter the Service Mode. (See page 1-4-2)
2. Press the number 5 button on the Remote Control Unit so that the value of Head Switching Position is displayed on the screen. If the test tape has 6.5H(412.7μs) Head Switching Point, Same number will display on the screen.
3. If the Adjustment is necessary, Follow Step 4.
4. Press CH UP or DOWN button on the Remote Control Unit if necessary then Value will be changed in 0.5H step up or down. Adjustable Range is up to 9.5H. If the values beyond adjustable range, display will change as:
Lower out of range; 0.0H
Upper out of range; .-H

11. SIF Adjustment

Purpose: To set the SIF (Sound Intermediate Frequency).

Symptom: Audio may not sound correctly.

| Test Point | Adjustment Point | Mode | Input |
|------------|---|------|------------|
| J247 (SIF) | T302 | --- | Color Bar |
| Tape | Measurement Equipment | | Spec. |
| --- | Pattern Generator Digital Volt Meter | | See below. |

Note: J247, T302 --- Main CBA

1. Receive Color Bar signal at any channel.
2. Connect Digital Volt Meter to J247.
3. Adjust T302 so that the voltage of TP SIF becomes DC $+3.1\pm0.1V$.

12-1. FM Audio Carrier Frequency (1.3MHz) Adjustment

Purpose: To set the FM audio carrier frequency to the optimum level.

Symptom of Misadjustment: Cannot playback Hi-Fi audio signal correctly which is recorded on the tape by another VCR, and vice versa.

| Test Point | Adj. Point | Mode | Input |
|--------------------------------|--|-------------|-------|
| J23 (FM-A-REC) J74 (GND) | VR901 (CAR 1.3MHz) (Hi-Fi Audio CBA) | Rec | — |
| Tape | Measurement Equipment | | Spec. |
| Blank | Audio Analyzer | 1300±10 kHz | |

Figure

Fig.4

Note: J23, VR901, J74 (GND) : Hi-Fi Audio CBA

1. Connect the Audio Analyzer to J23 and J74(GND).
2. Adjust VR901 so that the frequency of the Lch becomes 1300 ± 10 kHz.

12-2. FM Audio Carrier Frequency (1.7MHz) Adjustment

Purpose: To set the FM audio carrier frequency to the optimum level.

Symptom of Misadjustment: Cannot playback Hi-Fi audio signal correctly which is recorded on the tape by another VCR, and vice versa.

| Test Point | Adj. Point | Mode | Input |
|--------------------------------|--|------------|-------|
| J23 (FM-A-REC) J74 (GND) | VR901 (CAR 1.7MHz) (Hi-Fi Audio CBA) | Rec | — |
| Tape | Measurement Equipment | Spec. | |
| Blank | Audio Analyzer | 1700±10kHz | |

Figure

Audio Analyzer

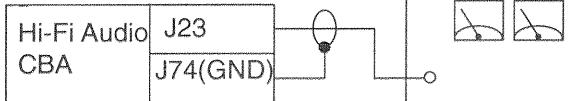

Fig.5

Note: J23, J74 (GND), VR901 : Hi-Fi Audio CBA

1. Connect the Audio Analyzer to J23 and J74 (GND).
2. Adjust VR901 so that the frequency of the R ch becomes $1700\pm10\text{kHz}$.

13. Stereo/SAP Filter Adjustment

Purpose: To set the carrier of Stereo/SAP detection filter properly.

Symptom of Misadjustment: Can't receive Stereo and SAP broadcast.

| Test Point | Adjustment Point | Mode | Input |
|---------------------------------------|--|-------|-----------------------------------|
| J78(MPX) J72 (FILTER) J74 (GND) | VR752 (FILTER) (Hi-Fi Audio CBA) | E-E | 22.9kHz 100mVrms (283mVp-p) |
| Tape | Measurement Equipment | Spec. | |
| — | Audio Generator Oscilloscope | — | |

Figure

Audio Generator

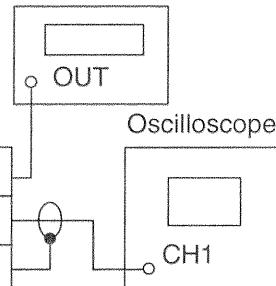

Fig.6

Note: J78, J72, J74(GND), VR752 : Hi-Fi Audio CBA

1. Receive a stereo broadcasting station by using the tuner.
2. Input a 22.9KHz, 100mVrms (283mVp-p) from the audio generator to J78.
3. Connect the Oscilloscope to J72 and J74(GND).
4. Adjust VR752 so that the output level becomes minimum.

Note:

After this adjustment, be sure to do the VCO and MTS Block Separation adjustment.

14. VCO Adjustment

Purpose: To adjust the reference signal of Stereo/SAP carrier properly.

Symptom of Misadjustment: Can't receive Stereo and SAP broadcast.

| Test Point | Adjustment Point | Mode | Input |
|---|----------------------------------|-------|-------------------------------------|
| J78(MPX) J73(VCO) J77(ST-L) J74(GND) | VR753 (VCO) (Hi-Fi Audio CBA) | E-E | 15.734kHz, 49mVrms (139mVp-p) |
| Tape | Measurement Equipment | Spec. | |
| — | Audio Generator Oscilloscope | — | |

Figure

Fig.7

Note: J78, J73, J77, J74(GND) ,VR753:
-----Hi-Fi Audio CBA

1. Set the oscilloscope to DC input mode and set voltage range as high as possible so that the waveform is at the center of picture.
2. Input a 15.734kHz, 49mVrms (139mVp-p) signal to J78 using the audio generator.
3. Adjust VR753 so that the DC level of J77 becomes 0V.
4. Input no signal to J78 and check DC level of J73. Next input 15.734kHz, 49mVrms (139mVp-p) signal to J78 and check DC level of J73. Adjust VR753 so that the level become equal under both conditions.

Note :

Be sure to do the Stereo/SAP Filter and MTS Block Separation adjustments together with adjustment.

15. MTS Block Separation Adjustment

Purpose: To remove the Crosstalk between the Left and Right Channel audio outputs.

Symptom of Misadjustment: Voice signal of L ch and R ch may be mixed under E-E and/or REC mode.

| Test Point | Adjustment Point | Mode | Input |
|--|---|-------------------|--|
| J78 (MPX) Audio Out (R) J74(GND) | VR755 (SEP 300) (Hi-Fi Audio CBA) VR754 (SEP 3K) (Hi-Fi CBA) | Tuner (Stereo) | 1kHz Mono 100% = 100mVrms (283mVp-p) |
| Tape | Measurement Equipment | Spec. | |
| — | Oscilloscope USA TV Multi Channel Sound Generator | — | |

Figure

Fig.8

Note: J78, VR754, J74(GND), VR755 : Hi-Fi Audio CBA

1. Input a 1kHz Mono 100% = 100mVrms to J78. Next set the sound generator to; Tone: 300Hz, Modulation: 20% (-13.9dB), Pilot: ON, NR: ON, PRE-EN: IN, L only mode.
2. Adjust VR755 so that the output level becomes minimum.
3. Select Tone: 3kHz signal and adjust VR754 so that the output from the Rch becomes minimum.
4. Repeat steps 2 to 3 several times to achieve the best results.

Note:

Be sure to do the Stereo/SAP filter and VCO Adjustments before this adjustment.

16. Separation Adjustment

Caution: Do not attempt to do this adjustment without the equipment specified below.

Purpose: To set the audio output level of the tuner properly.

Symptom of Misadjustment: Audio signal of L ch and R ch may be mixed under E-E and/or REC mode.

| Test Point | Adjustment Point | Mode | Input |
|--|--|-------------------|--|
| Antenna In J61(Audio Out R) J74(GND) | VR305(MPX.) (MAIN CBA) | Tuner (Stereo) | Color Bar with 100% White, 87.5% 300Hz or 3kHz Stereo (L ch Only)20% (-13.9dB) modulatio |
| Tape | Measurement Equipment | Spec. | |
| — | TV Monitor Oscilloscope USA TV Multi Channel Sound Generator TV Modulator TV Up Converter Video Pattern Generator | — | |

Figure

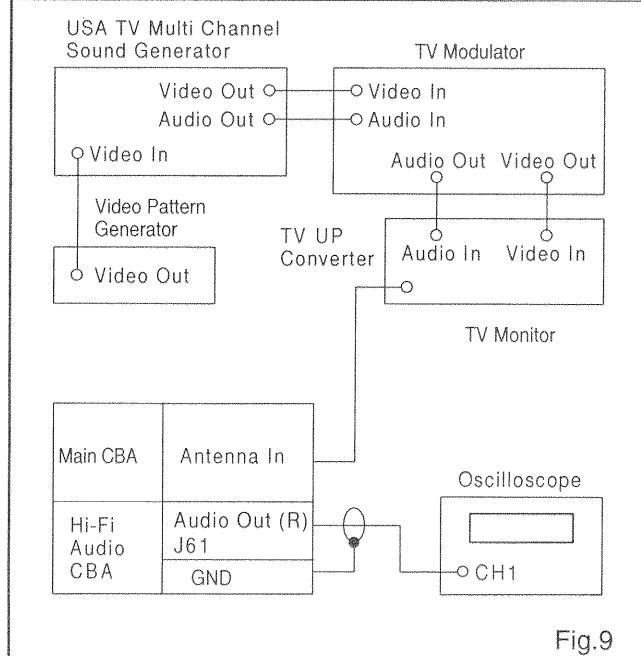

Fig.9

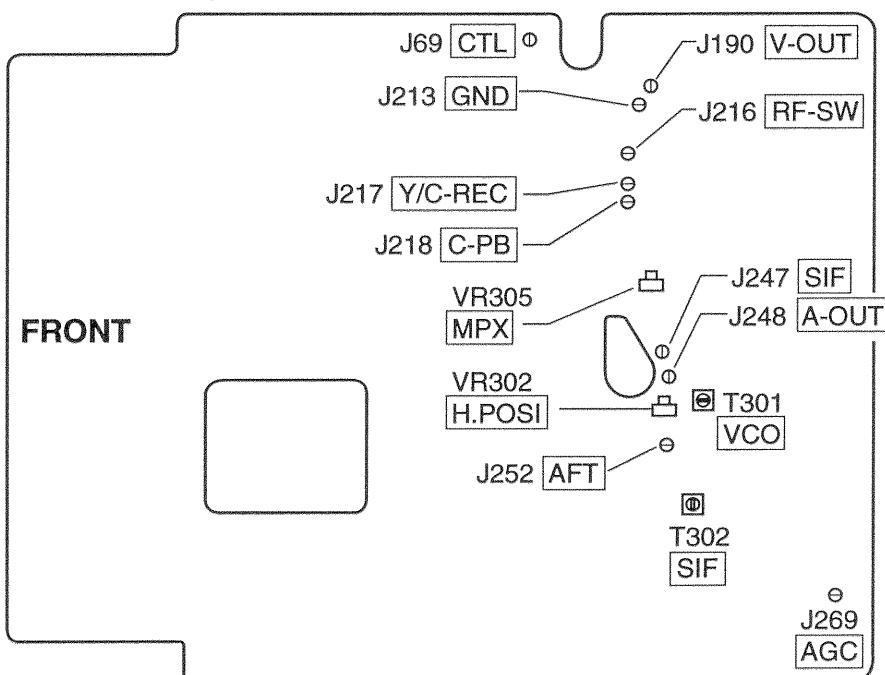

Notes: Antenna In, VR305: Main CBA

J61(Audio-Out R), J74(GND) : Hi-Fi Audio CBA

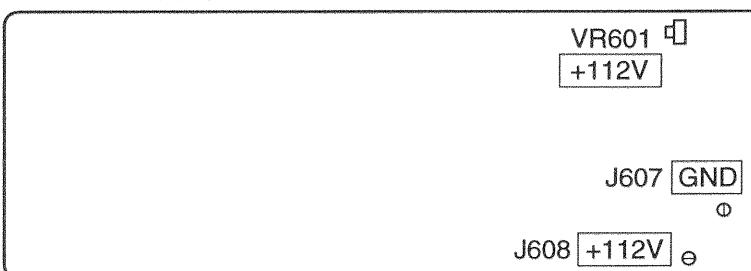

1. Output a color bar with 100% white from the video pattern generator, then make 87.5% modulation by the TV modulator.
2. Output a 1kHz Mono 100% signal from the sound generator, then set 25kHz deviation exactly by the sound generator.
3. Set the sound generator to;
Tone: 300Hz, Modulation: 20% (-13.9 dB), Pilot: ON, NR: IN, PRE-EN: IN, L only mode.
4. Set the TV up converter to 70 dB μ , ch 10 (193.25kHz), then set the channel of the VCR to ch10.
5. Confirm the word "STEREO" appears on the TV monitor. Adjust VR305 to obtain minimum level of R ch.
6. Select tone: 3kHz signal then check if signal leakage of R ch is less than the leakage under Tone: 300Hz signal. If not adjust VR305.

SCHEMATIC DIAGRAMS / CBA'S AND TEST POINTS

Standard Notes

WARNING

Many electrical and mechanical parts in this chassis have special characteristics. These characteristics often pass unnoticed and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts that have these special safety characteristics are identified in this manual and its supplements; electrical components having such features are identified by the mark "▲" in the schematic diagram and the parts list. Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts that do not have the same safety characteristics as specified in the parts list may create shock, fire, or other hazards.

Note:

- 1 Do not use the part number shown on these drawings for ordering. The correct part number is shown in the parts list, and may be slightly different or amended since these drawings were prepared.
- 2 All resistance values are indicated in ohms ($K=10^3$, $M=10^6$).
- 3 Resistor wattages are 1/4W or 1/6W unless otherwise specified.
- 4 All capacitance values are indicated in μF ($P=10^{-6} \mu F$).
- 5 All voltages are DC voltages unless otherwise specified.

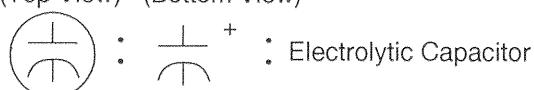

Capacitor Temperature Markings

| Mark | Capacity change rate | Standard temperature | Temperature range |
|------|----------------------|----------------------|-------------------|
| (B) | $\pm 10\%$ | 20°C | -25~+85°C |
| (F) | +30 -80% | 20°C | -25~+85°C |
| (SR) | $\pm 15\%$ | 20°C | -25~+85°C |
| (Z) | +30 -80% | 20°C | -10~+70°C |

LIST OF CAUTION, NOTES, AND SYMBOLS USED IN THE SCHEMATIC DIAGRAMS ON THE FOLLOWING PAGES:

1. CAUTION:

FOR CONTINUED PROTECTION AGAINST FIRE HAZARD, REPLACE ONLY WITH THE SAME TYPE FUSE.

ATTENTION: POUR UNE PROTECTION CONTINUE LES RISQUES D'INCENDIE N'UTILISER QUE DES FUSIBLES MEMO TYPE.

RISK OF FIRE-REPLACE FUSE AS MARKED.

2. CAUTION:

Fixed voltage power supply circuit is used in this unit.

If Main Fuse (F01) is blown, first check to see that all components in the power supply circuit are not defective before you connect the AC plug to the AC power supply. Otherwise it may cause some components in the power supply circuit to fail.

3. Note:

- (1)Do not use the part number shown on the drawings for ordering. The correct part number is shown in the parts list, and may be slightly different or amended since the drawings were prepared.
- (2)To maintain original function and reliability of repaired units, use only original replacement parts which are listed with their part numbers in the parts list section of the service manual.

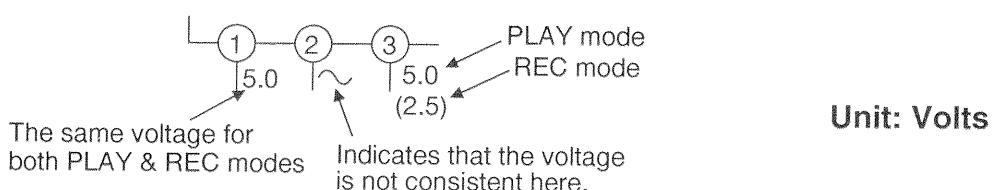

4. Wire Connectors

- (1)Prefix symbol "CN" means "connector." (Can disconnect and reconnect)
- (2)Prefix symbol "CL" means "wire-solder holes of the PCB." (Wire is soldered directly.)

5. Note: Mark "•" is a leadless (chip) component.

6. Mode: SP/REC

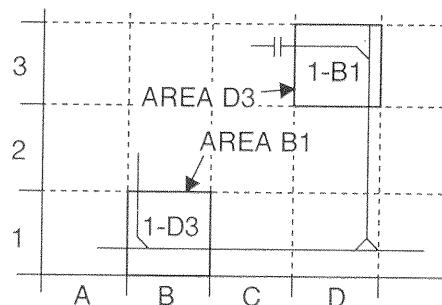

7. Voltage indications for PLAY and REC modes on the Schematics are as shown below:

8. How to read converged lines

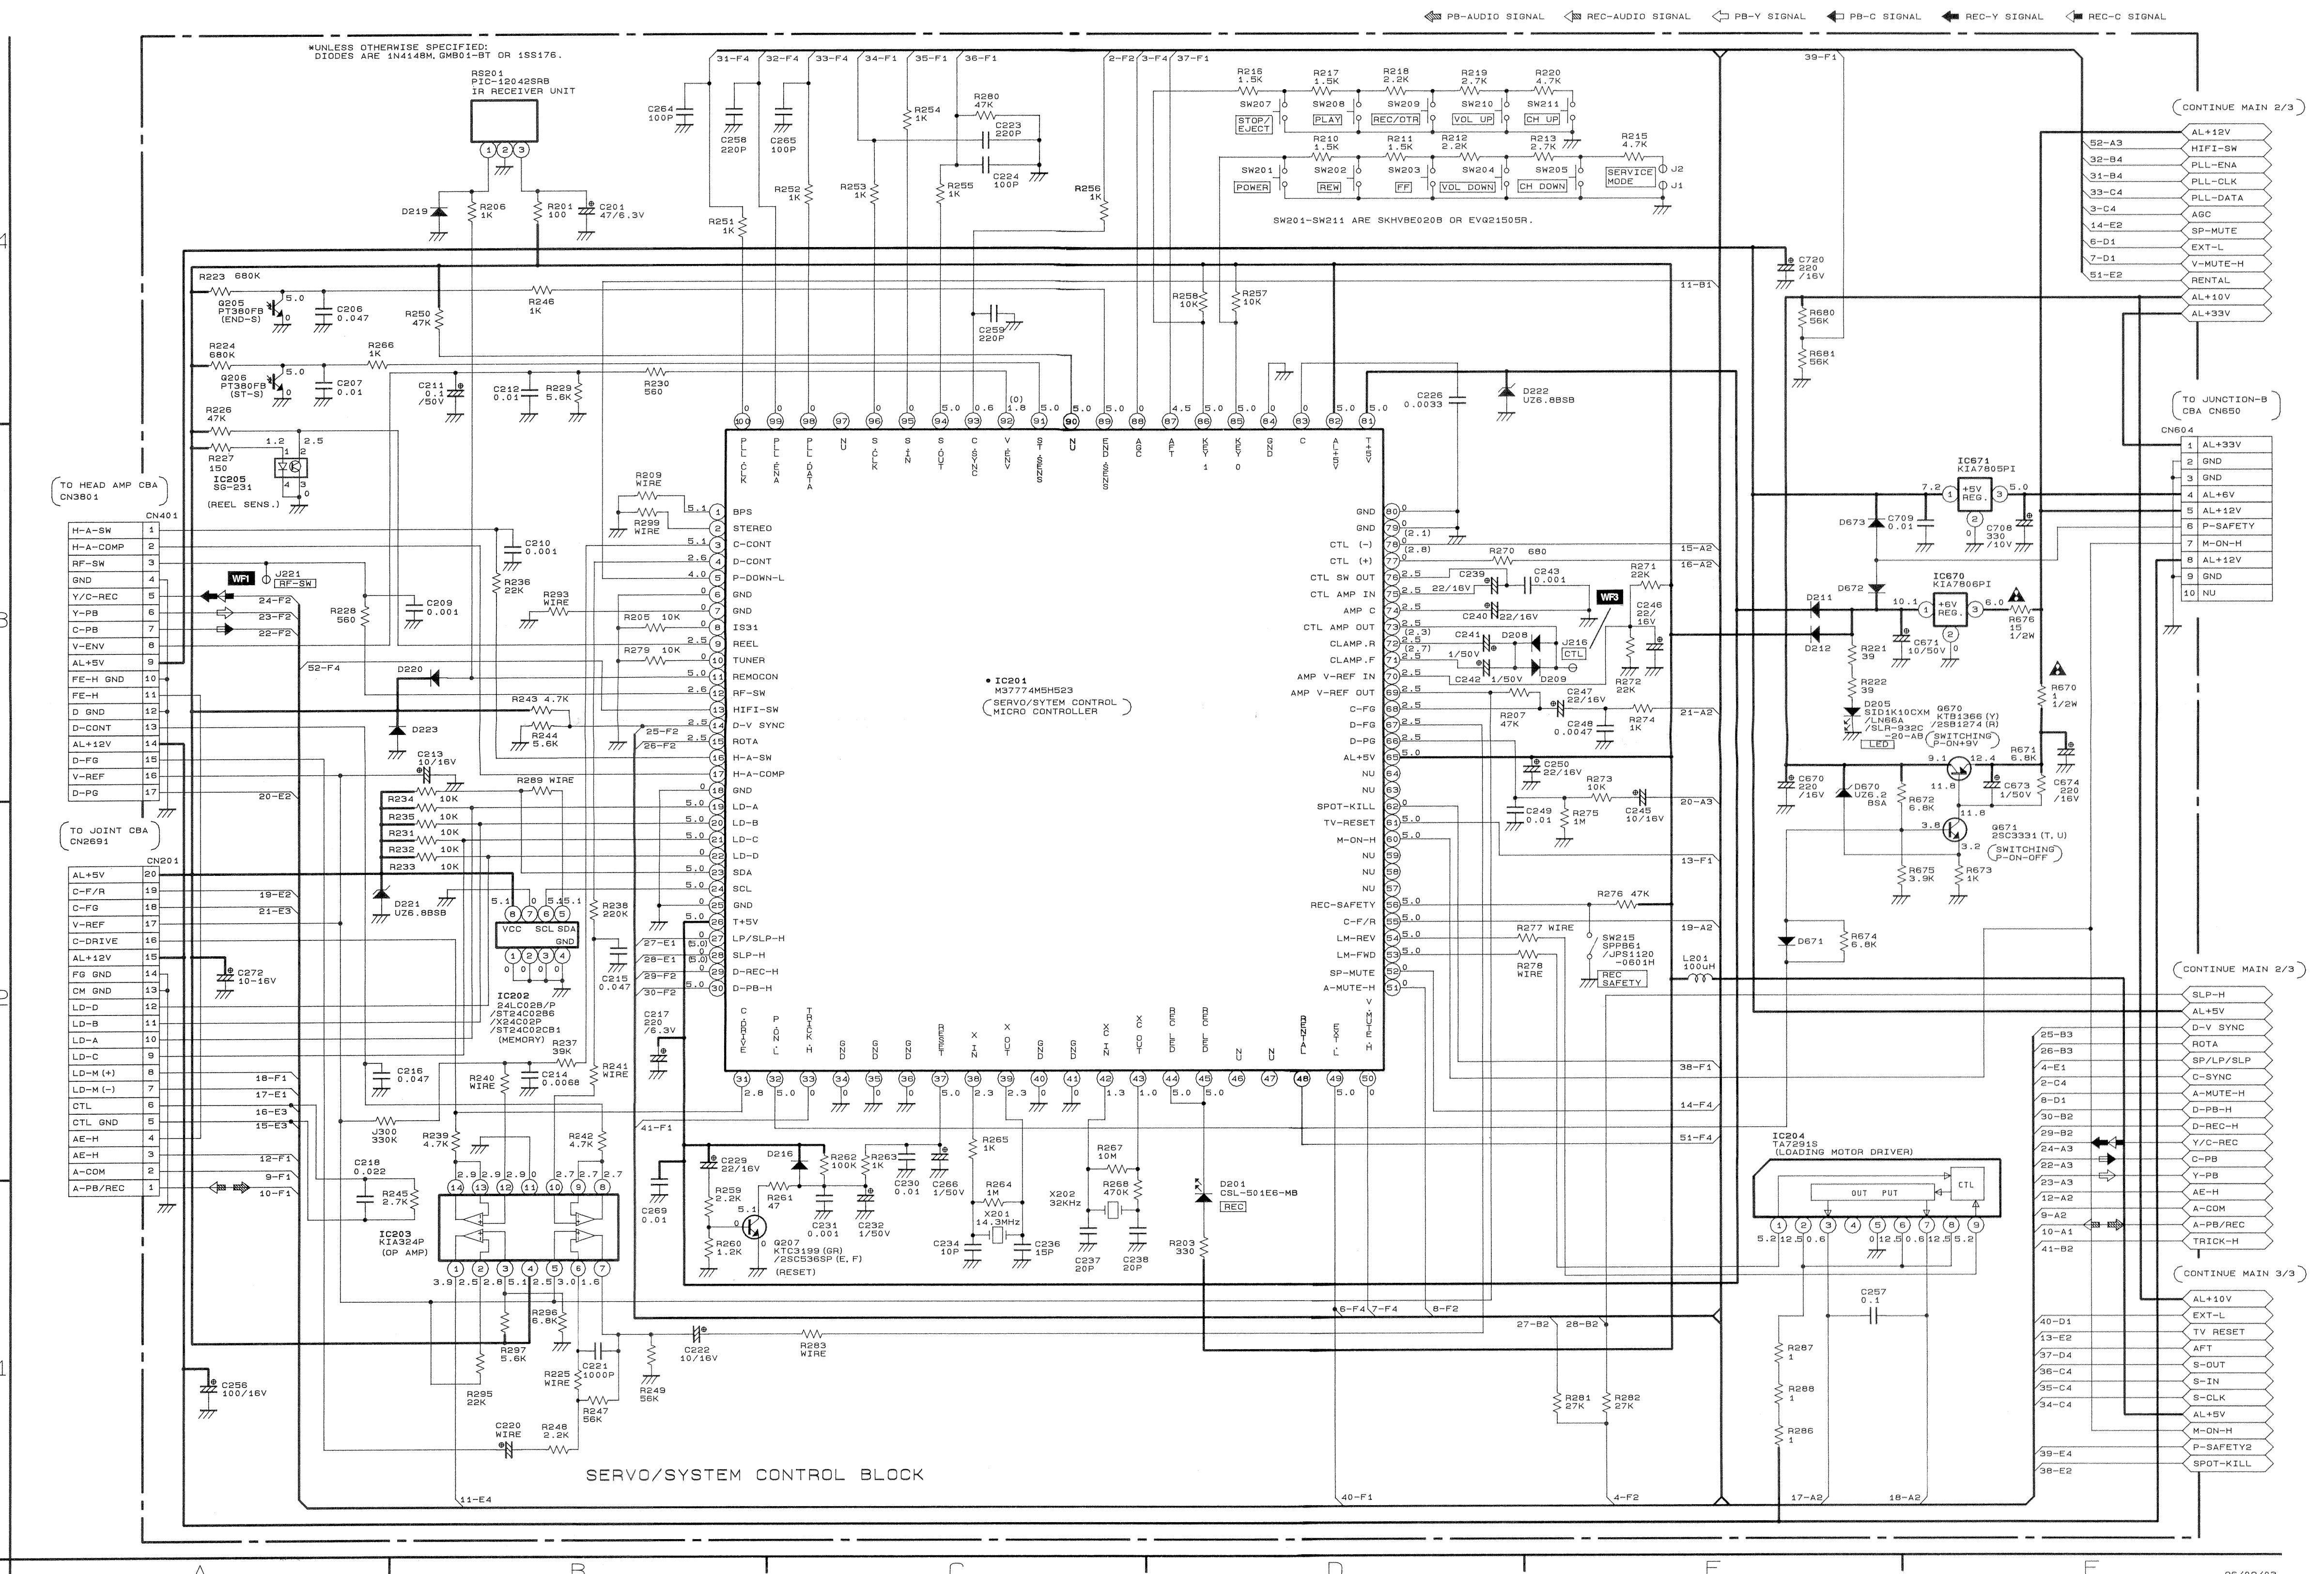

1-D3
↑
Distinction Area
Line Number
(1 to 3 digits)
Examples:

1. "1-D3" means that line number "1" goes to area "D3".
2. "1-B1" means that line number "1" goes to area "B1".

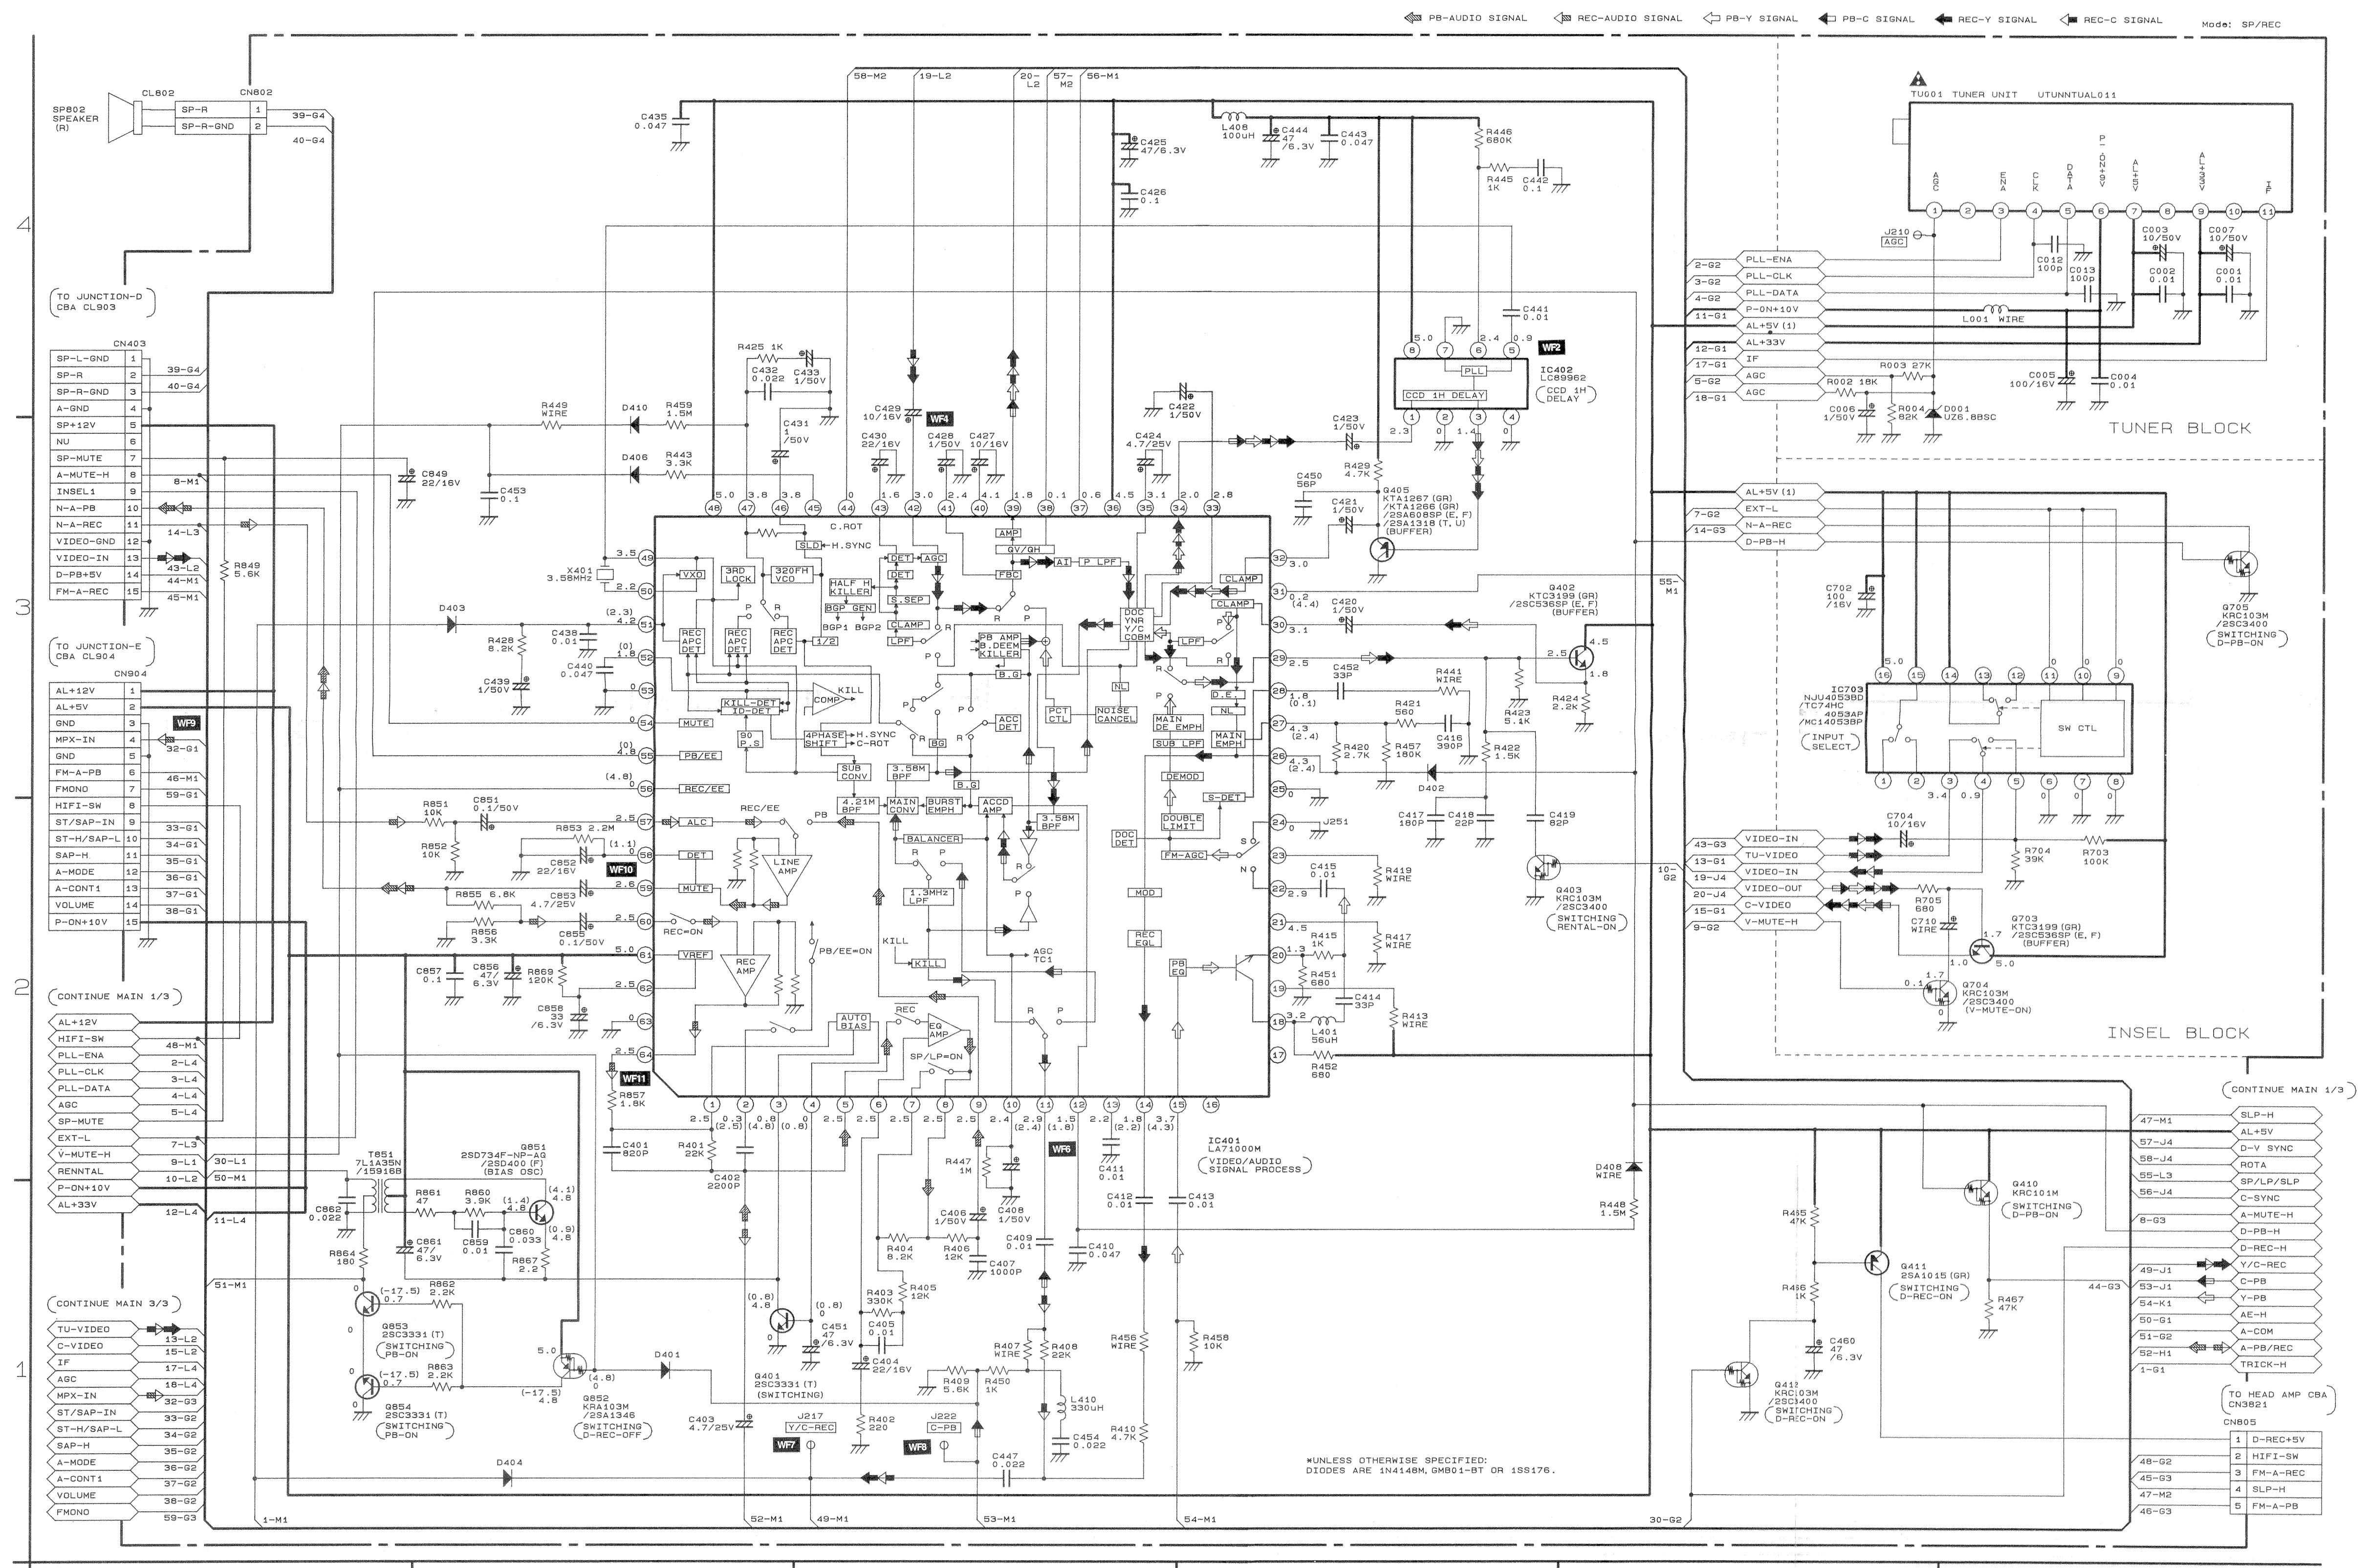

9. Test Point Information

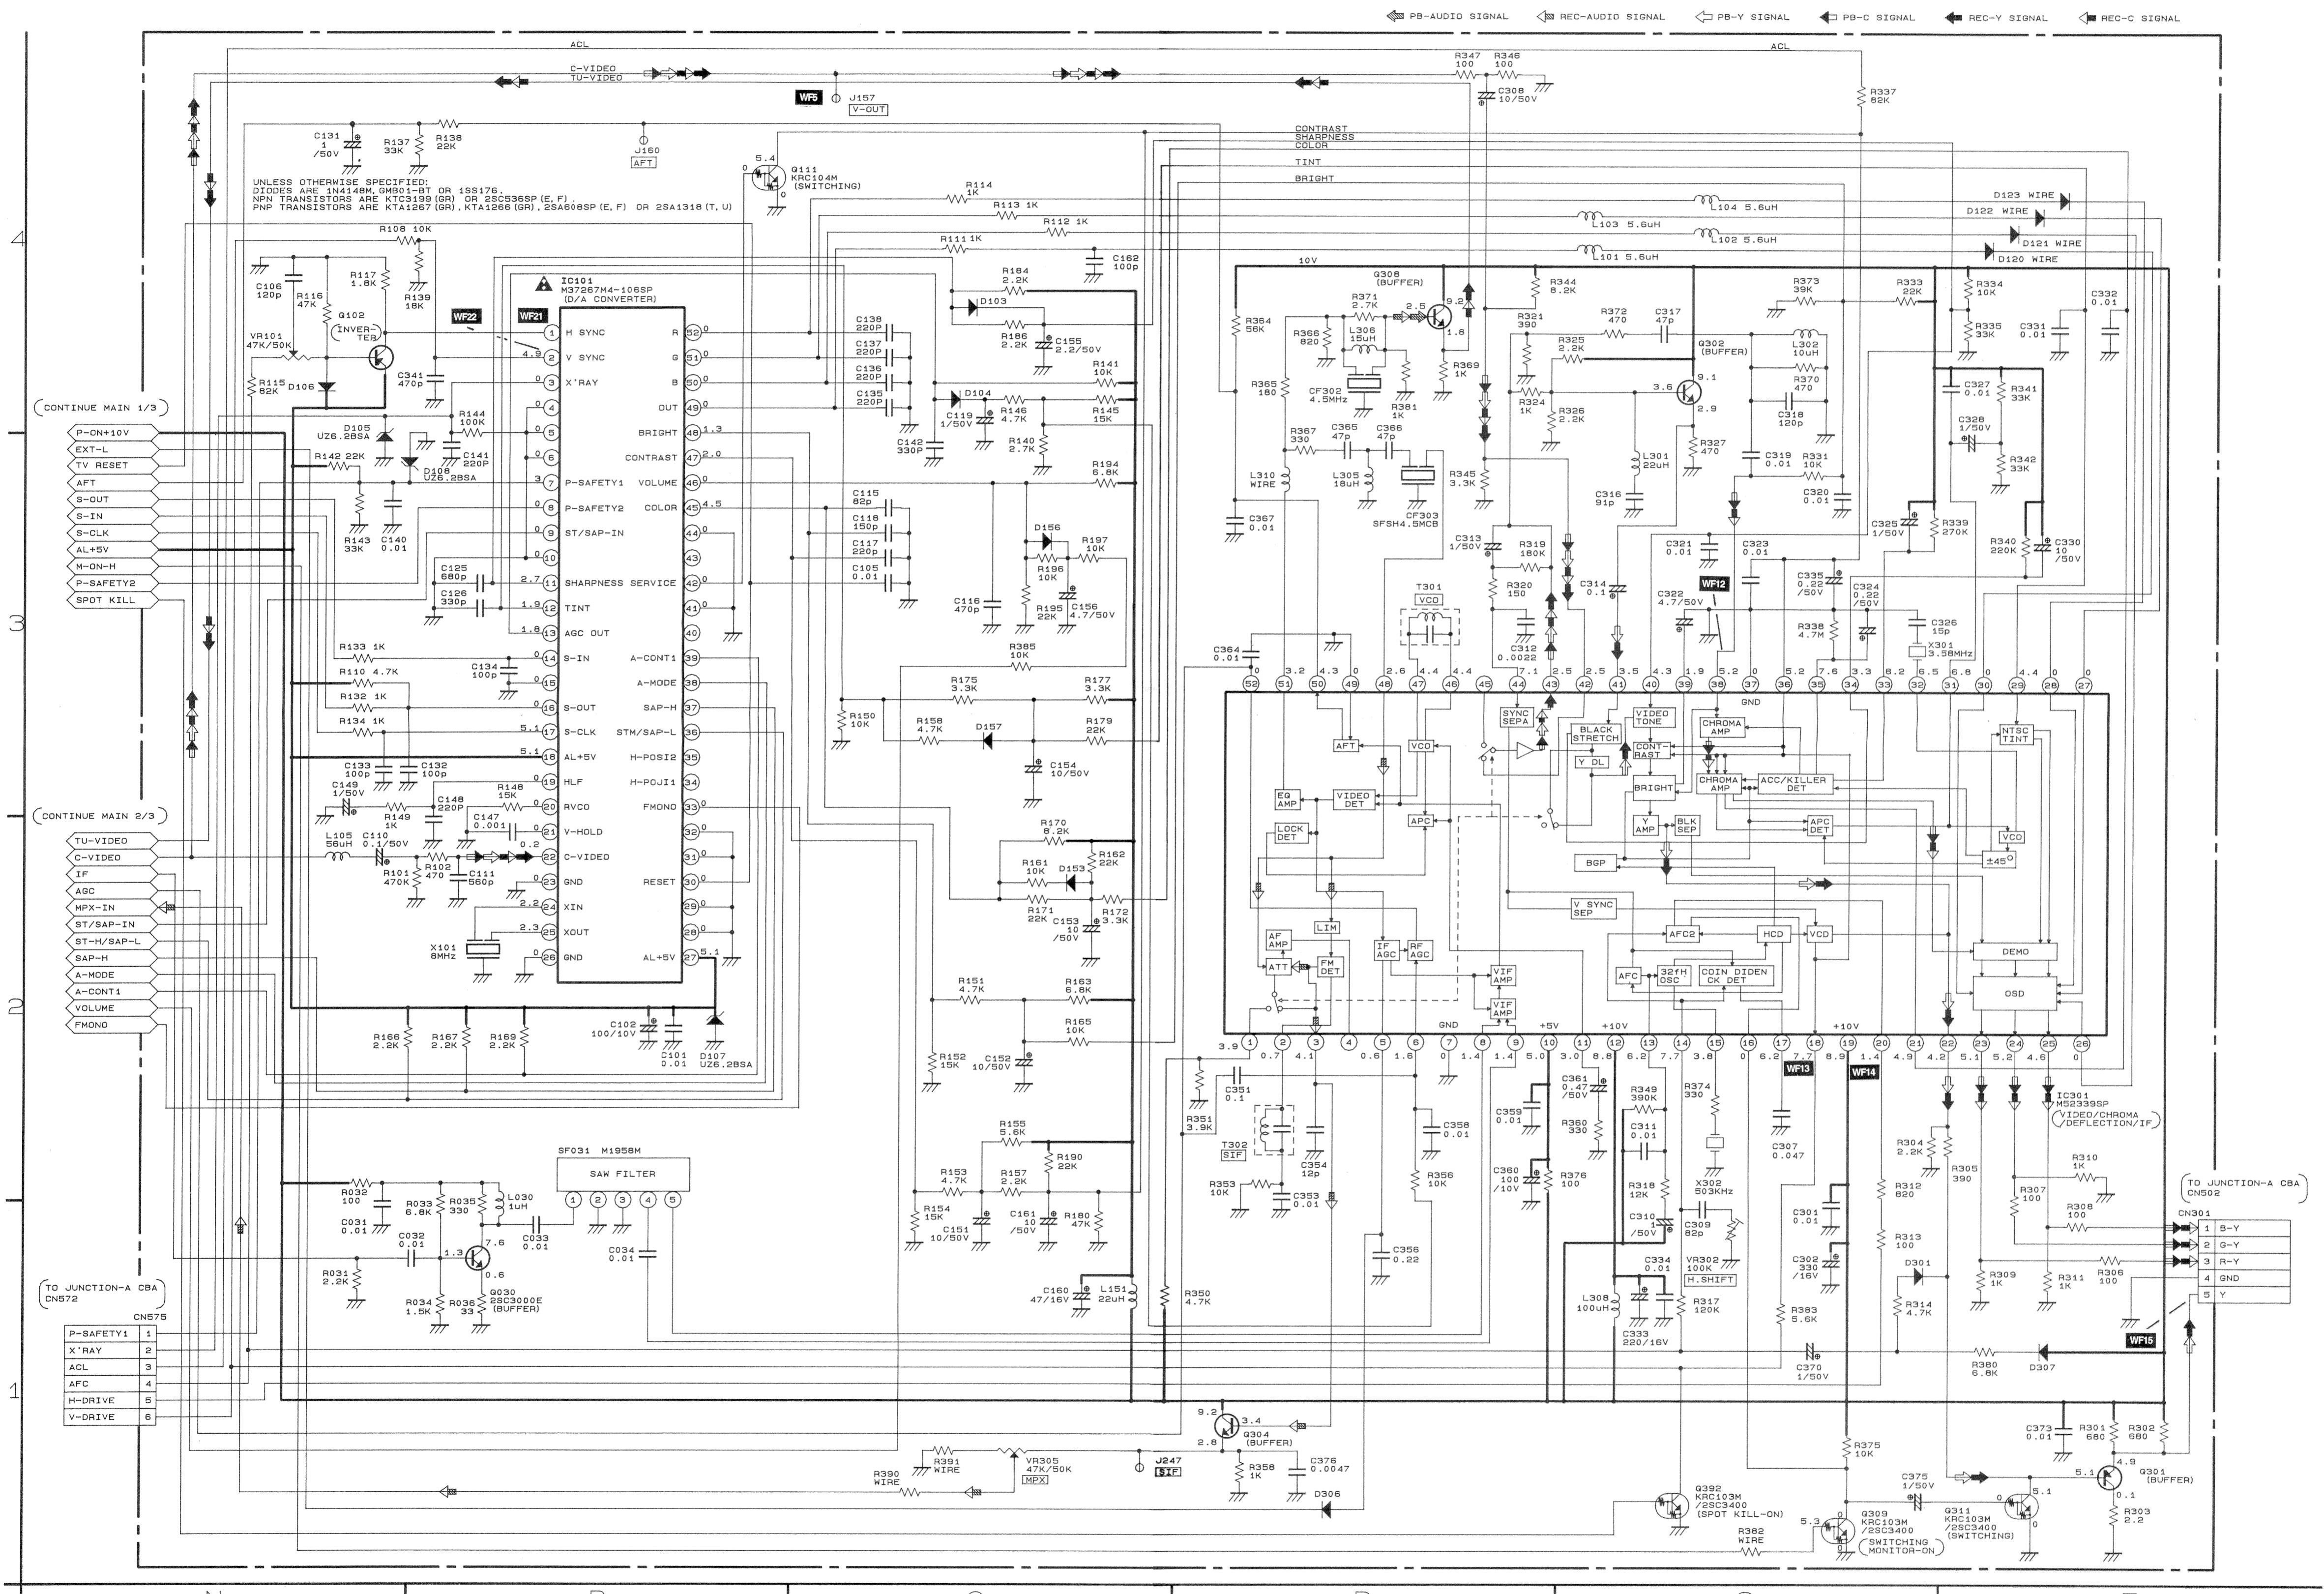

- : Indicates a test point with a jumper wire across a hole in the PCB.
- : Used to indicate a test point with a component lead on foil side.
- : Used to indicate a test point with no test pin.
- : Used to indicate a test point with a test pin.

Power Supply & H/V Schematic Diagram

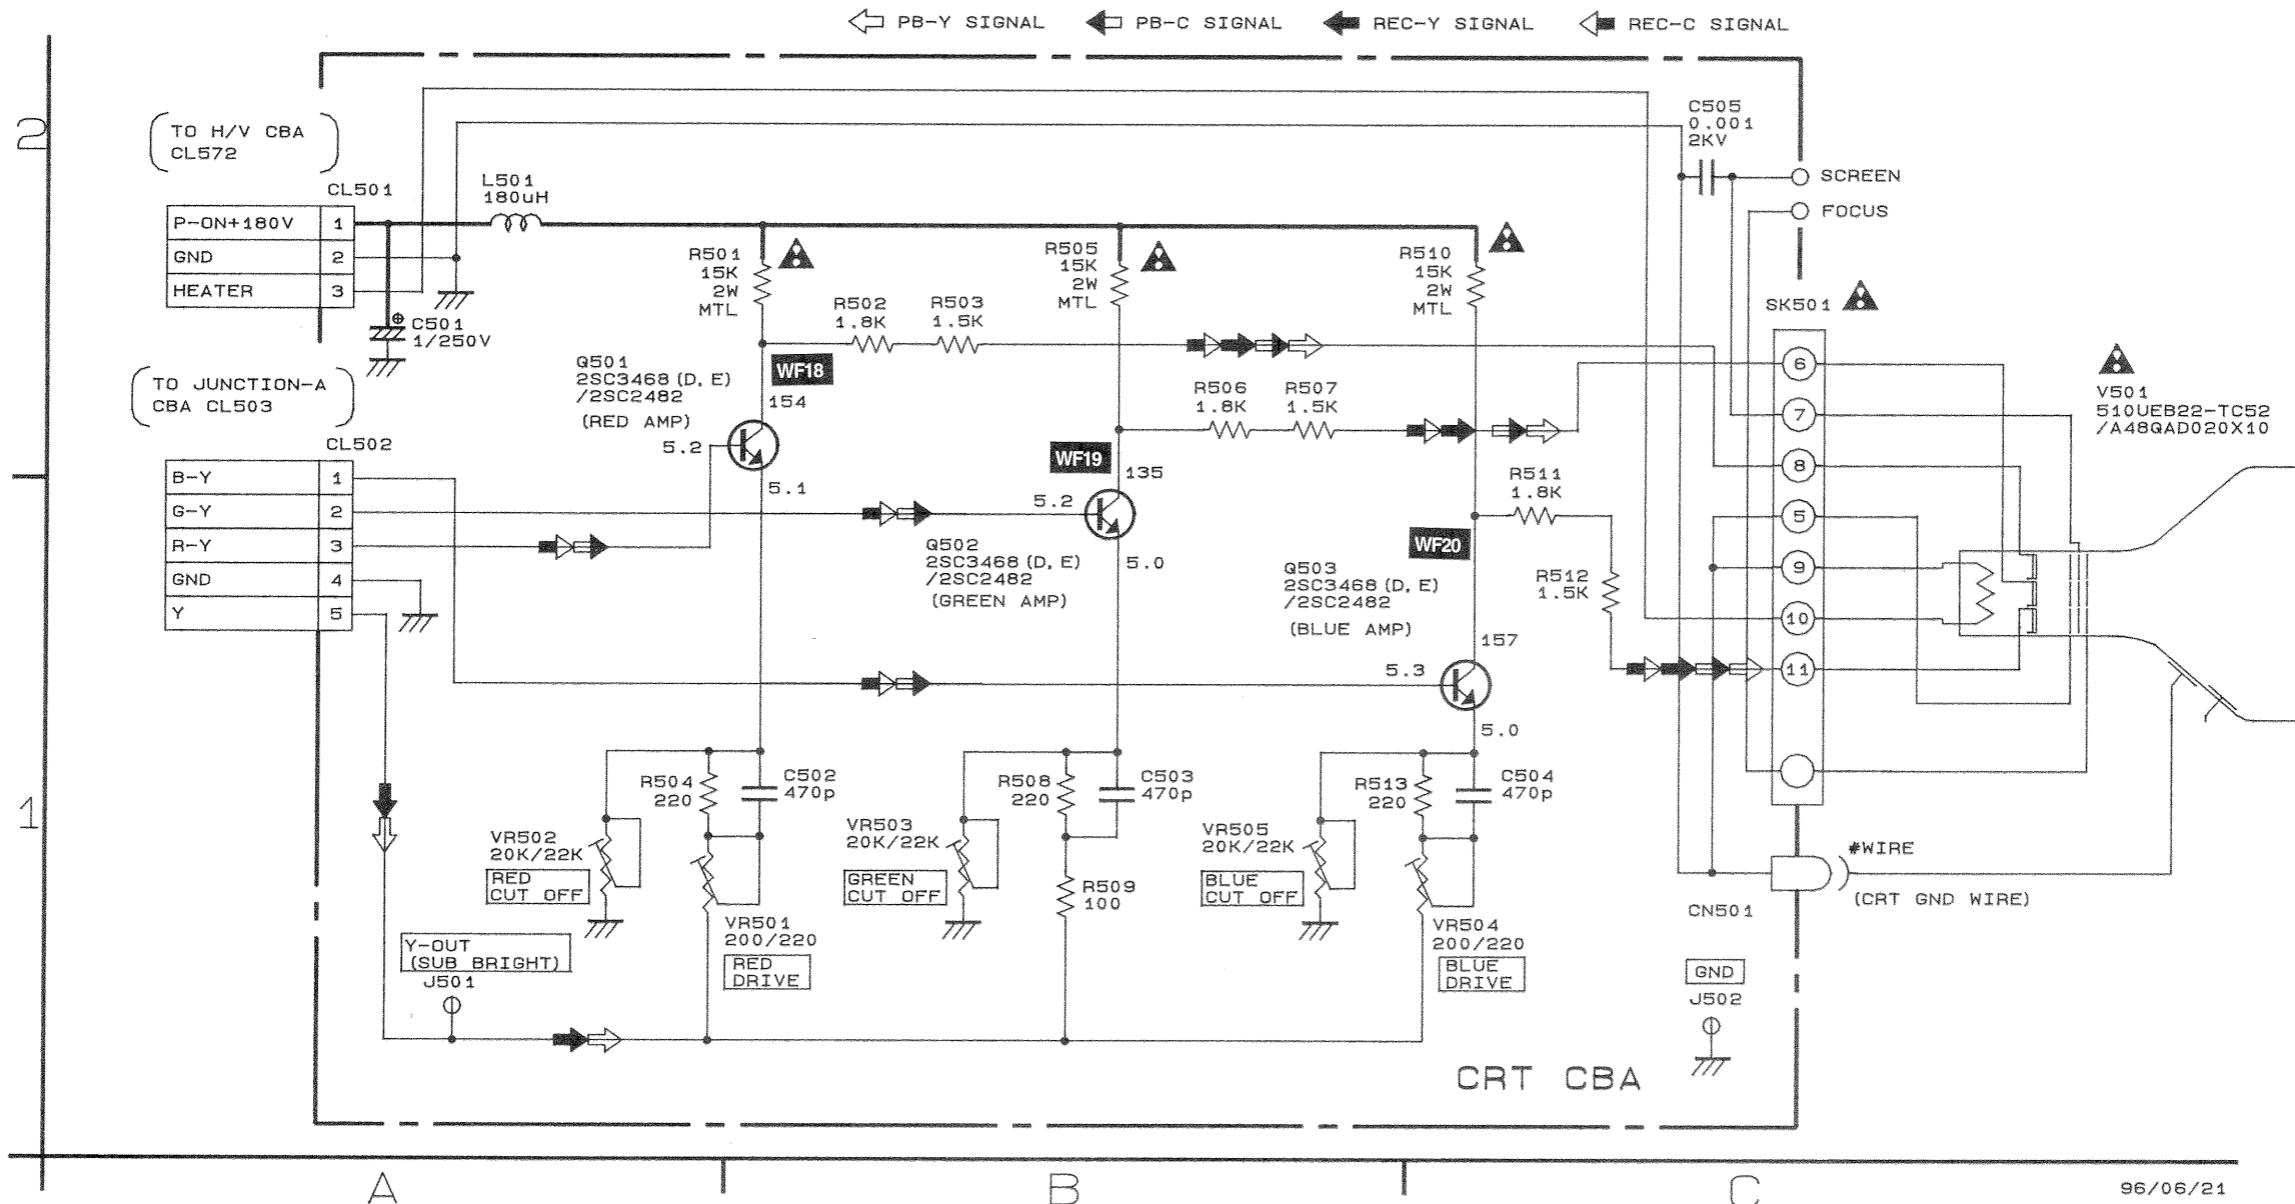

CAUTION
FOR CONTINUED PROTECTION AGAINST FIRE HAZARD,
REPLACE ONLY WITH THE SAME TYPE FUSE.
ATTENTION : POUR UNE PROTECTION CONTINUE LES RISQUES
D'INCENDIE N'UTILISER QUE DES FUSIBLES DE MEMO TYPE.
RISK OF FIRE-REPLACE FUSE AS MARKED.
*This symbol means fast operating fuse.
*Ce symbole représente un fusible à fusion rapide.

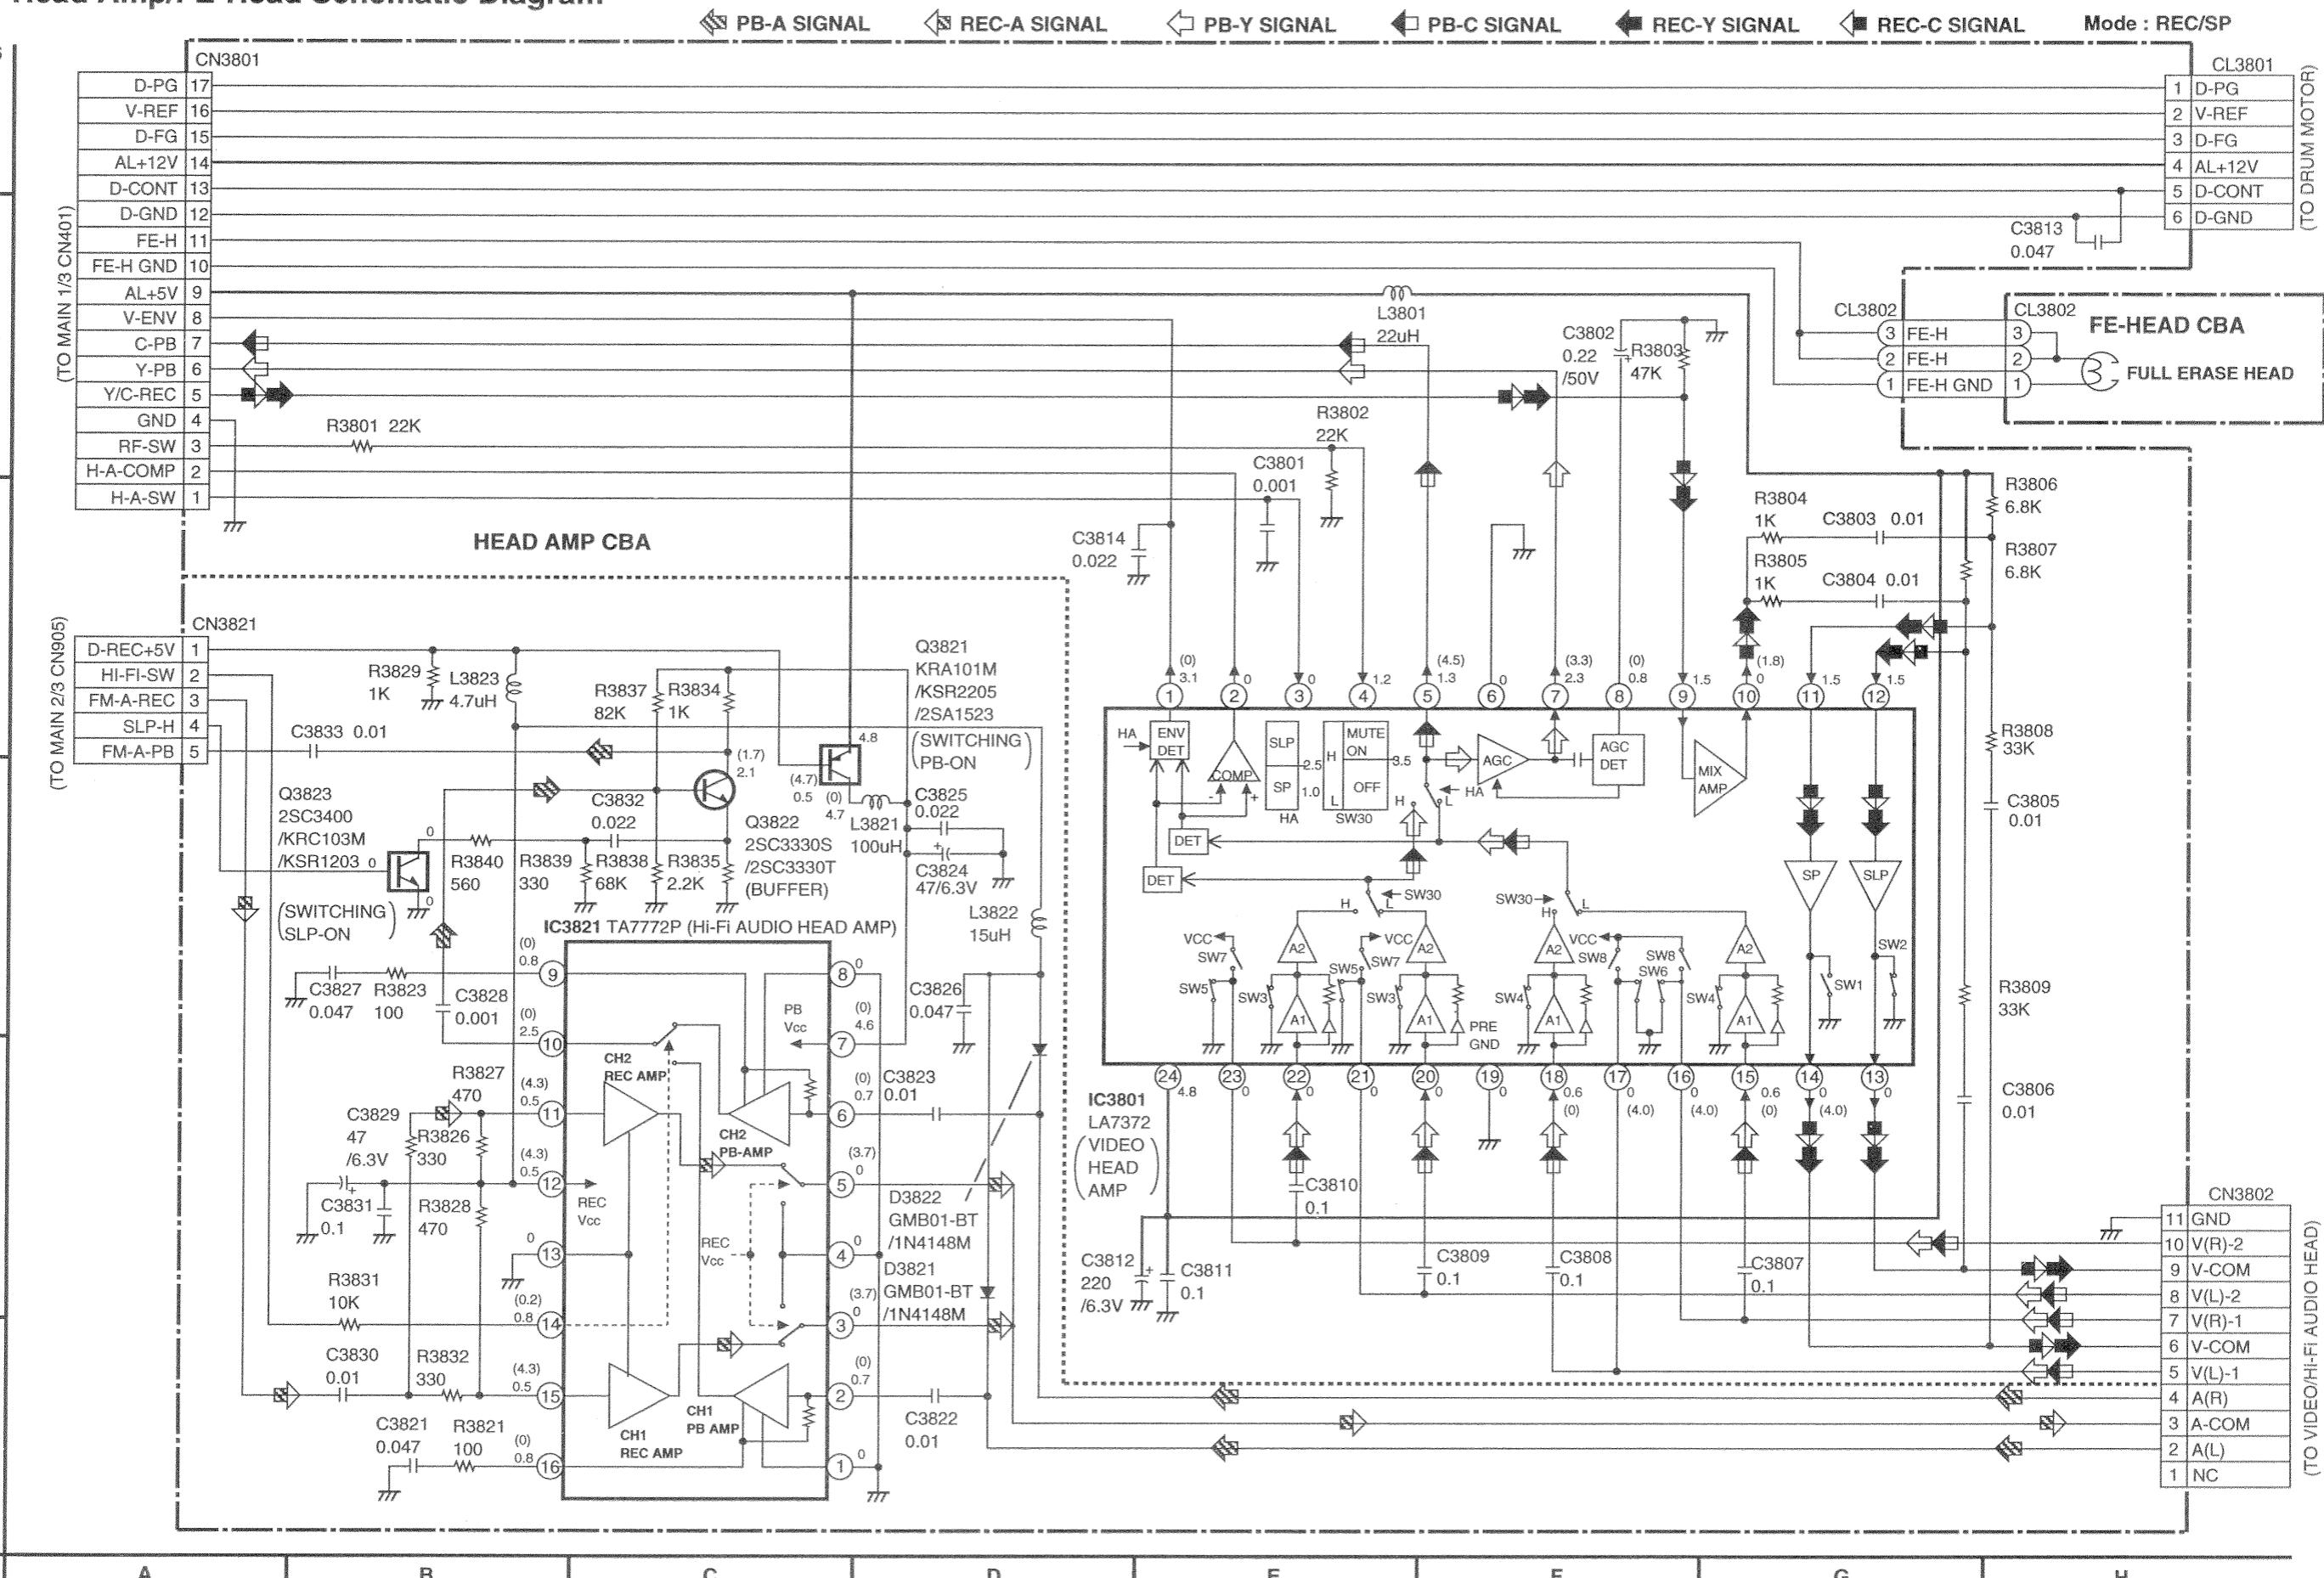

CAUTION !
Fixed voltage power supply circuit is used in this unit.
If Main Fuse (F01) is blown, check to see that all components in the power supply
circuit are not defective before you connect the AC plug to the AC power supply.
Otherwise it may cause some components in the power supply circuit to fail.

Note: There are two types of FE head CBAs and three types of FE heads. Combinations are made clear in Deck electrical parts list. As long as the combination is correct, all the three types of FE heads are interchangeable. The digit "3" is abbreviated in a reference number screened on CBAs. For example, CL802 on CBA is in fact CL3802.

Notes:

1. Clean all parts for the tape transport (Upper Drum with Video Head / Pinch Roller / Audio Control Head / Full Erase Head) using 90% Isopropyl Alcohol.
2. After cleaning the parts, do all DECK ADJUSTMENTS.
3. For the reference numbers listed above, refer to Deck Exploded Views.

Cleaning

Cleaning of Video Head

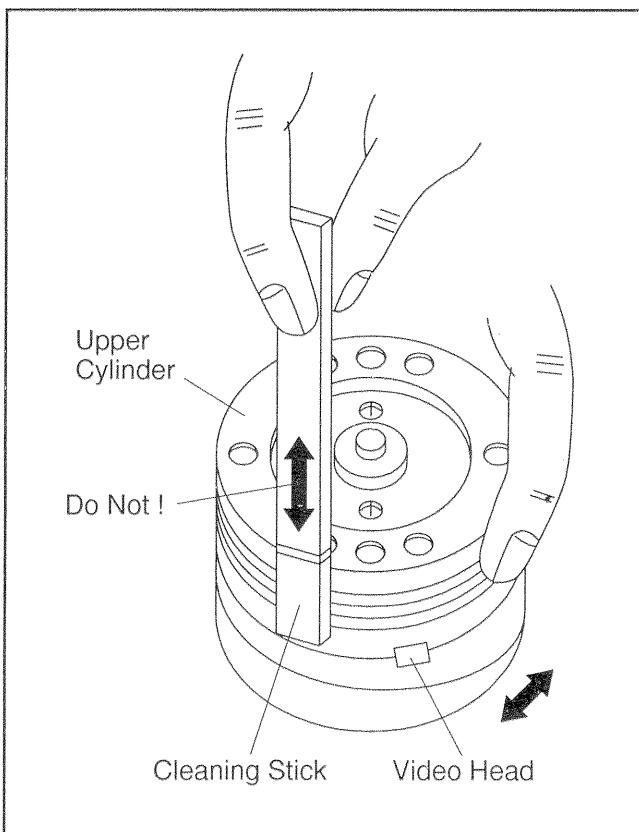

Clean the head with a head cleaning stick or chamois skin.

Procedure

1. Remove the top cabinet.
2. Put on a glove (thin type) to avoid touching the upper and lower drum with your bare hand.
3. Put a few drops of 90% Isopropyl alcohol on the head cleaning stick or on the chamois skin and, by slightly pressing it against the head tip, turn the upper drum to the right and to the left.

Notes:

1. The video head surface is made of very hard material, but since it is very thin, avoid cleaning it vertically.
2. Wait for the cleaned part to dry thoroughly before operating the unit.
3. Do not reuse a stained head cleaning stick or a stained chamois skin.

Cleaning of Audio Control Head

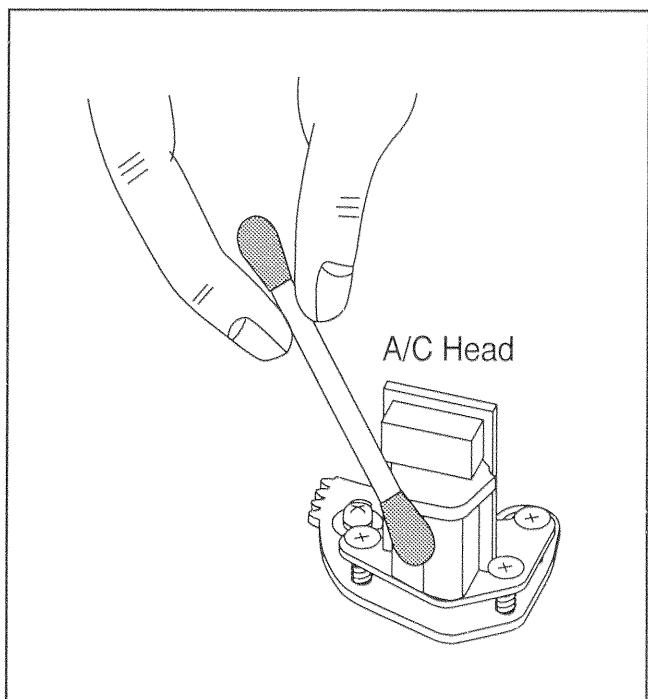

Clean the head with a cotton swab.

Procedure

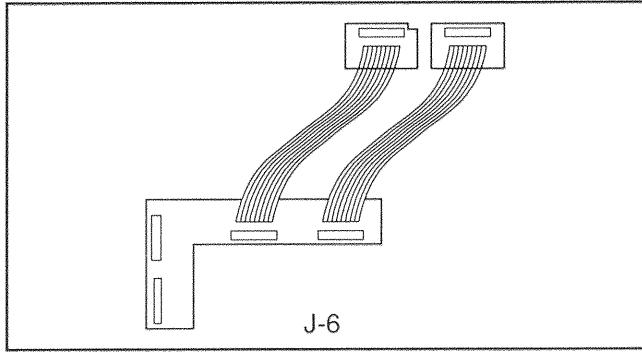

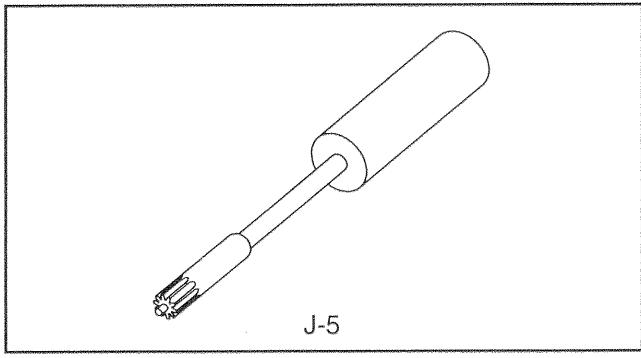

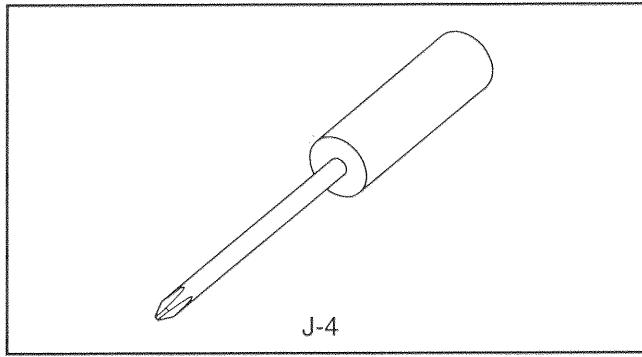

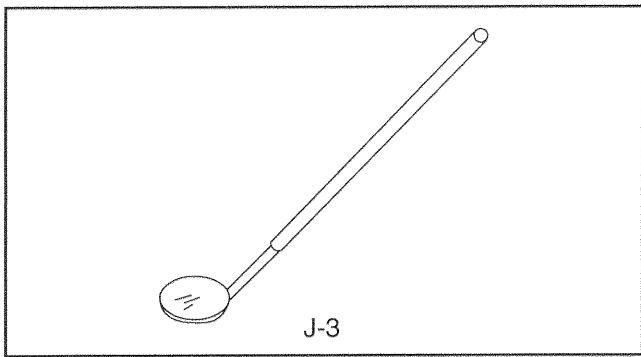

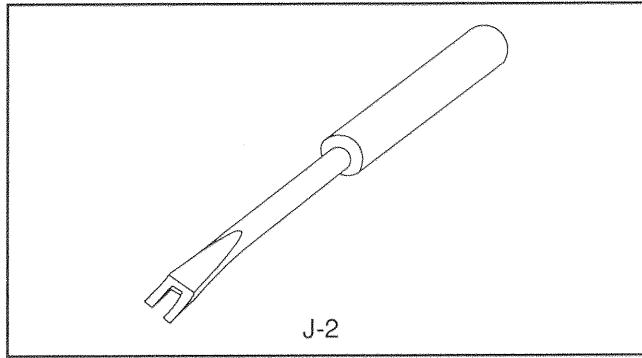

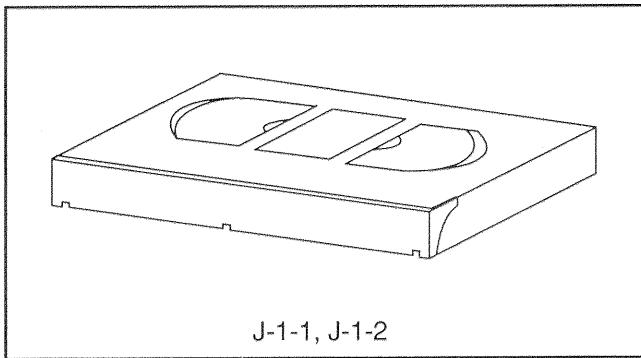

1. Remove the top cabinet.
2. Dip the cotton swab in 90% isopropyl alcohol and clean the audio control head. Be careful not to damage the upper drum and other tape running parts.

Notes:

1. Avoid cleaning the audio control head vertically.
2. Wait for the cleaned part to dry thoroughly before operating the unit or damage may occur.

SERVICE FIXTURE AND TOOLS

| Ref. No. | Name | Part No. | Adjustment |
|----------|------------------------------|-------------------|--|
| J-1-1 | Alignment Tape | FL8A | Electrical Adjustments |
| J-1-2 | Alignment Tape | FL8NW | Azimuth and X Value Adjustment of Audio Control Head / Adjustment of Envelope Waveform |
| J-2 | Guide Roller Adj.Screwdriver | FSJ-0006 | Guide Roller |
| J-3 | Mirror | FSJ-0004 | Tape Transportation Check |
| J-4 | Azimuth Adj.Screwdriver | Available Locally | A/C Head Height |
| J-5 | X Value Adj.Screwdriver | FSJ-0007 | X Value |
| J-6 | Deck Extention Cable | N1091XA | All Mechanical and Electrical Adjustments |

Note:

Before starting any adjustment, take the Deck Assembly out of the cabinet and use J-6 to connect the Deck Assembly with the Main CBA.

MECHANICAL ALIGNMENT PROCEDURES

Explanation of alignment for the tape to correctly run starts on the next page. Refer to the information below on this page if a tape gets stuck, for example, in the mechanism due to some electrical trouble of the unit.

Service Information

A. Method for Manual Tape Loading/Unloading

To load a cassette tape manually:

1. Disconnect the AC plug.
2. Remove the Top Cover.
3. Insert a cassette tape. Though the tape will not be automatically loaded, make sure that the cassette tape is all the way in at the inlet of the Cassette Holder. To confirm this, lightly push the cassette tape further in and see if the tape comes back out, by a spring motion, just as much as you have pushed in.
4. Turn the Pulley Assembly in the appropriate direction shown in Fig. M1 until the cassette tape is fully loaded. By turning the Pulley Assembly, you are turning the cam indicated in this figure. However, movement of the cam will be very slow. Allow a minute or two to complete this task.

To unload a cassette tape manually:

1. Disconnect the AC plug.
2. Remove the Top Cover.
3. Turn the Pulley Assembly in the appropriate direction shown in Fig. M1 to unload the cassette tape. When turning the Pulley Assembly, please be aware that this is a long process and the cassette will not start getting unloaded instantaneously. Within this long process, before the cassette actually starts getting unloaded, there is a time period during which the moving guide assemblies slide back to their original positions shown in Fig. M1. However, the tape will be left wound around the cylinder. To put the tape back into the cassette, gently turn the Capstan Motor in the direction shown in Fig. M2. Make sure that the tape is completely placed back in the cassette before the cassette starts getting unloaded. Otherwise the tape hanging out will be caught and damaged by the lid of the cassette when it closes. By turning the Pulley Assembly, you are turning the cam indicated in Fig. M1. As stated, movement of the cam will be very slow. Allow a minute or two to complete this task.

B. Method to place the Cassette Holder in the tape-loaded position without a cassette tape

1. Disconnect the AC Plug.

2. Remove the Top Cover.
3. Turn the Pulley Assembly in the appropriate direction shown in Fig. M1 until the Cassette Holder comes to the tape-loaded position. Allow a minute or two to complete this task.

Top View

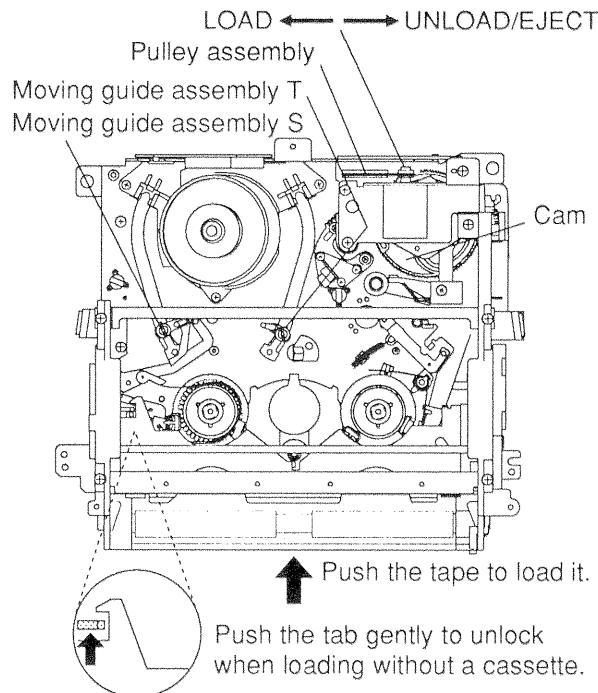

Fig. M1

Bottom View

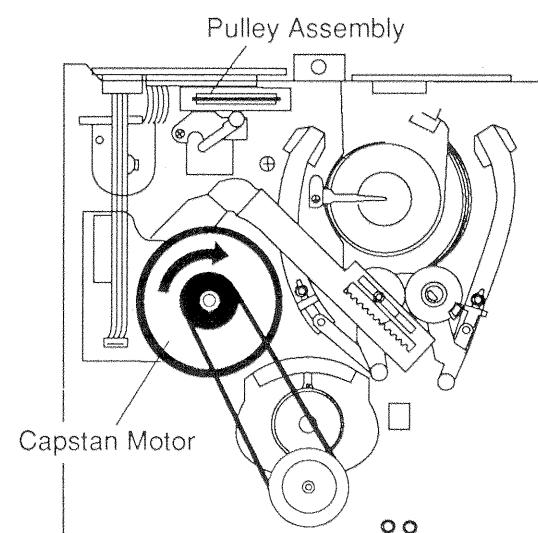

Fig. M2

1. Tape Interchangeability Alignment

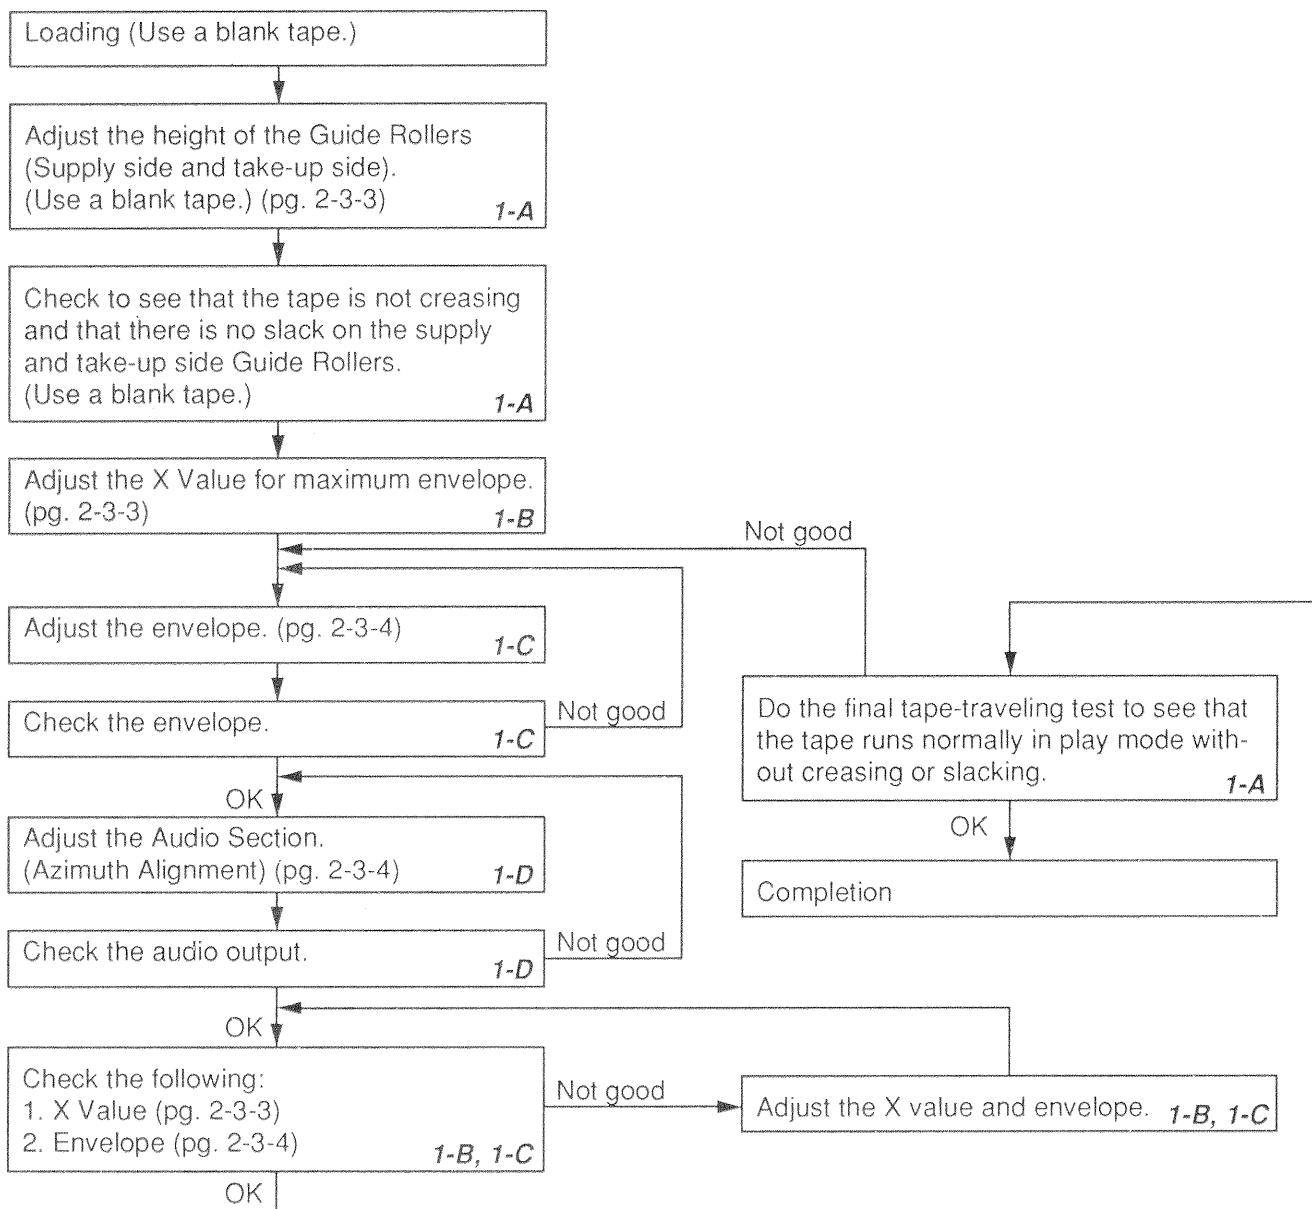

Note: To do these alignment procedures, make sure that the Tracking Control Circuit is set to the center position every time a tape is loaded or unloaded. (Refer to page 2-3-4, procedure 1-C, step 1.)

Equipment required:

Dual Trace Oscilloscope
VHS Alignment Tape (FL8NW)
Guide Roller Adj. Screwdriver
X-Value Adj. Screwdriver

Note: Before starting this Mechanical Alignment, do all Electrical Adjustment procedures.

Flowchart of Alignment for tape traveling

1-A. Preliminary/Final Checking and Alignment of Tape Path

Purpose:

To make sure that the tape path is well stabilized.

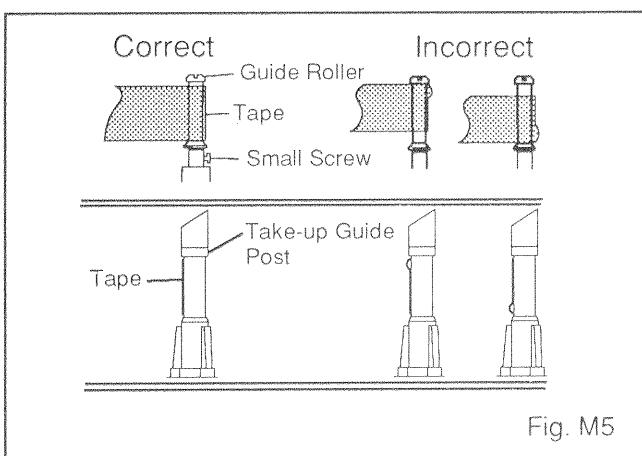

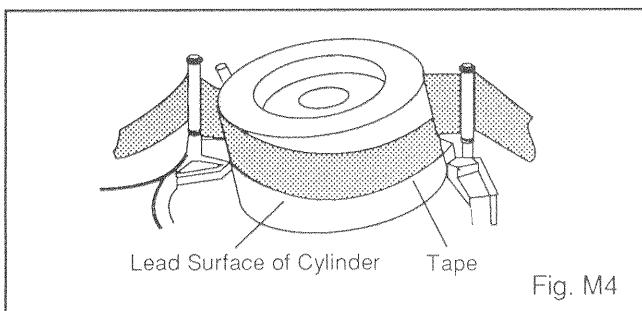

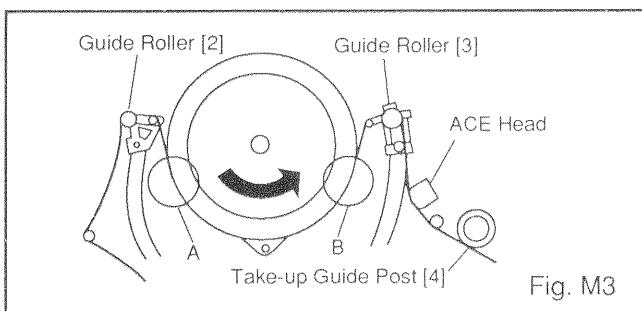

Symptom of Misalignment:

If the tape runs unstable, the tape will be damaged.

Note: Do not use an Alignment Tape for this procedure. If the unit is not correctly aligned, the tape may be damaged.

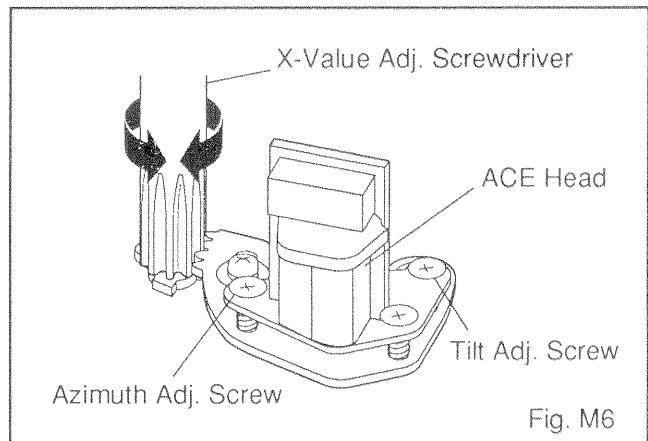

1. Play back a blank cassette tape and check to see that the tape runs without creasing at Guide Rollers [2] and [3], and at points A and B on the lead surface. (Refer to Fig M3 and M4.)
2. If creasing is apparent, align the height of the guide rollers by turning the top of Guide Rollers [2] and [3] with a Guide Roller Adj. Screwdriver. (Refer to Fig. M3 and M5.)

Note: Beneath each Guide Roller, there is a small screw. (Refer to Fig. M5.) This screw works to ap-

ply adequate torque to the shaft of each Guide Roller so that the Guide Roller turns properly. Even when adjusting the height of the Guide Roller(s), do not touch these two small screws.

3. Check to see that the tape runs without creasing at Take-up Guide Post [4] or without snaking between Guide Roller [3] and ACE Head. (Fig. M3 and M5)
4. If creasing or snaking is apparent, adjust the Tilt Adj. Screw of the ACE Head. (Fig. M6)

1-B. X Value Alignment

Purpose:

To align the Horizontal Position of the Audio/Control/Erase Head.

Symptom of Misalignment:

If the Horizontal Position of the Audio/Control/Erase Head is not properly aligned, maximum envelope cannot be obtained at the Neutral position of the Tracking Control Circuit.

1. Set the Tracking Control Circuit to the center position by pressing CH UP and DOWN buttons on VCR simultaneously. (Refer to note on page 2-3-4.)
2. Connect the oscilloscope to TP (C-PB) and TP (CTL) on the Main CBA. Use TP (RF-SW) as a trigger.
3. Play back the Gray Scale of the Alignment Tape (FL8NW) and confirm that the PB FM signal is present.
4. Use the X-Value Adj. Screwdriver so that the PB FM signal at TP (C-PB) or TP of AUDIO OUT is maximum. (Fig.M6)
5. Press CH UP button on VCR until CTL waveform is shifted by approx. +2msec. Make sure that the envelope is simply attenuated (shrinks in height) during this process so that you will know the envelope has been at its peak.
6. Press CH DOWN button on VCR until CTL waveform is shifted from its original position (not the po-

sition achieved in step 5 just above, but the position of CTL waveform until step 4) by approximately -2msec. Make sure that the envelope is simply attenuated (shrinks in height) once CTL waveform passes its original position and is further brought in the minus direction.

7. Set the Tracking Control Circuit to the center position by pressing CH UP and DOWN buttons on VCR simultaneously.

1-C. Checking/Adjustment of Envelope Waveform

Purpose:

To achieve a satisfactory picture and precise tracking.

Symptom of Misalignment:

If the envelope output is poor, noise will appear in the picture. The tracking will then lose precision and the playback picture will be distorted by any slight variation of the Tracking Control Circuit.

1. Set the Tracking Control Circuit to the center position by pressing both CH UP and DOWN buttons on VCR simultaneously.
2. Connect the oscilloscope to TP (C-PB) on the Main CBA. Use TP (RF-SW) as a trigger.
3. Play back the Gray Scale on the Alignment Tape (FL8NW). Adjust the height of Guide-Rollers [2] and [3] (Fig.M3) watching the oscilloscope display so that the envelope becomes as flat as possible. To do this adjustment, turn the top of the Guide Roller with the Guide Roller Adj. Screwdriver.
4. If the envelope is as shown in Fig. M7, adjust the height of Guide Roller [2] (Refer to Fig.M3) so that the waveform looks like the one shown in Fig. M9.
5. If the envelope is as shown in Fig. M8, adjust the height of Guide Roller [3] (Refer to Fig.M3) so that the waveform looks like the one shown in Fig. M9.
6. When Guide Rollers [2] and [3] (Refer to Fig.M3) are aligned properly, there is no envelope drop either at the beginning or end of track as shown in Fig. M9.

Note: Upon completion of the adjustment of Guide Rollers [2] and [3] (Refer to Fig. M3), check the X Value by pushing the Tracking Control Up or Down buttons alternately, to check the symmetry of the envelope. Check the number of pushes to ensure center position. The number of pushes UP to achieve 1/2 level of envelope should match the number of pushes DOWN from center. If required, redo the "X Value Alignment."

1-D. Azimuth Alignment of Audio/Control/Erase Head

Purpose:

To correct the Azimuth alignment so that the Audio/Control/Erase Head meets tape tracks properly.

Symptom of Misalignment:

If the position of the Audio/Control/Erase Head is not properly aligned, the Audio S/N Ratio or Frequency Response will be poor.

1. Connect the oscilloscope to the audio output jack on the rear side of the deck.
2. Play back the alignment tape (FL8NW) and confirm that the audio signal output level is 8 kHz.
3. Adjust Azimuth Adj. Screw so that the output level on the AC Voltmeter or the waveform of the oscilloscope is at maximum. (Fig. M6)

Dropping envelope level at the beginning of track.

Fig. M7

Dropping envelope level at the end of track.

Fig. M8

Envelope is adjusted properly. (No envelope drop)

Fig. M9

DISASSEMBLY/ASSEMBLY PROCEDURES OF DECK MECHANISM

Main Mechanism

Before following the procedures described below, be sure to:

1. Remove the deck assembly from the cabinet.
(Refer to DISASSEMBLY INSTRUCTIONS in Main Section.)
2. Remove Front Loading Assembly from the main mechanism of the deck assembly. (See Fig. DM1.)

All the following procedures, including those for adjustment and replacement of parts, should be done in Eject mode; see the positions of [33] and [34] in Fig. DM3 on page 2-4-4. When reassembling, follow the steps in reverse order.

| STEP /LOC. No. | START- ING No. | PART | REMOVAL | | INSTALLATION ADJUSTMENT CONDITION |

*[2], *[3]: Slider Gear in Step [2] and that in Step [3] are identical. However, they are divided into two steps because, before reassembling Slider Shaft, one Slider Gear must be preinstalled at either end of Slider Shaft.

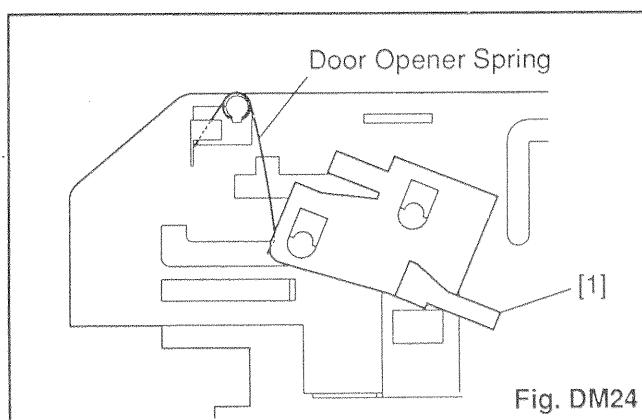

Fig. DM24

Before removing Parts [4], [5], [6] or [7], shift [7b] to Cassette-in position.

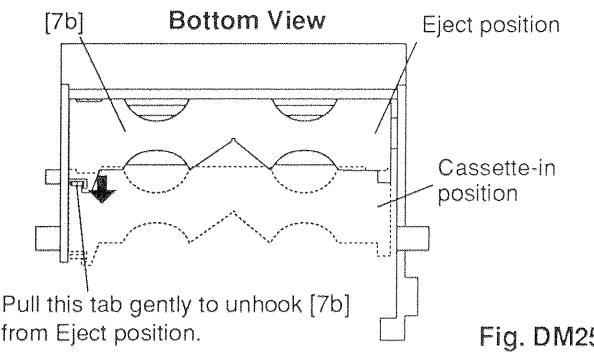

Fig. DM25

Install/remove in Cassette-in position to ensure that [7b] is in locked position.

**View before disassembling [2] and [3]
(Installation of Slider Shaft and Slider Gear)**

Install [2] and [3] in Eject position.

(When disassembling, [2] and [3] can be removed either in Eject position or Cassette-in position.)

- This figure shows where [2], [3] and other parts are in Eject position.

Fig. DM30

ALIGNMENT PROCEDURES OF MECHANISM

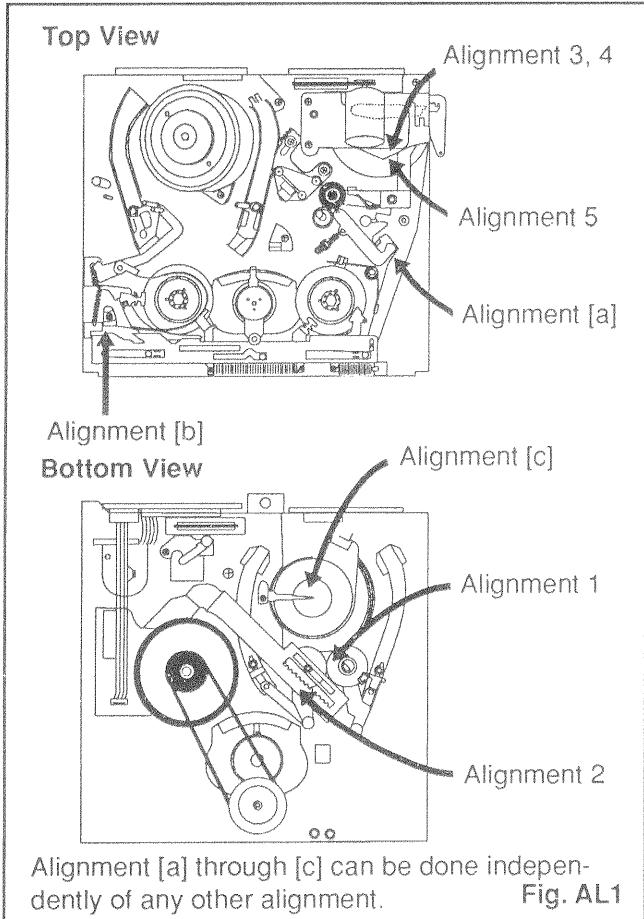

The following procedures describe how to align the individual gears and levers that make up the tape loading/unloading mechanism. Since information about the state of the mechanism is provided to the System Control Circuit only through the Mode Switch, it is essential that the correct relationship between individual gears and levers be maintained.

All alignments are to be performed with the mechanism in Eject mode, in the sequence given. Each procedure assumes that all previous procedures have been completed.

IMPORTANT:

If any one of these alignments is not performed properly, even if off by only one tooth, the unit will unload or stop and it may result in damage to the mechanical or electrical parts.

Alignment points in Eject Position

Alignment [a]

Tape Guide Assembly

- Measurement of the black screw must be as specified in Fig. AL3.

Alignment 1

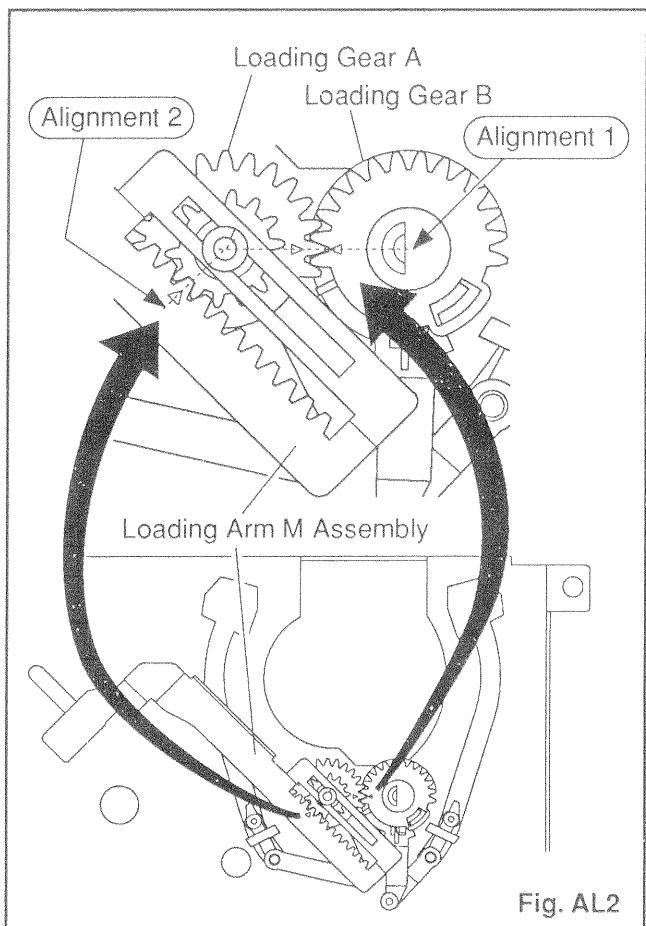

Loading Gears, A and B

- Install Loading Gears A and B so that their triangle marks point to each other as shown in Fig. AL2.

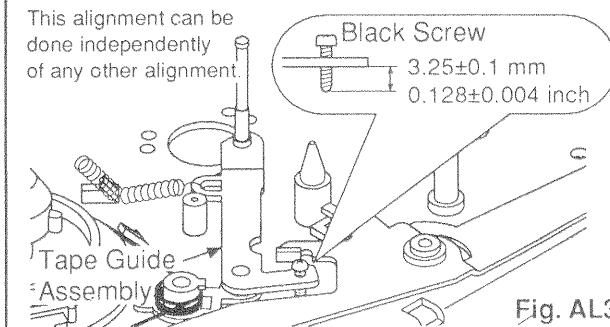

Alignment 2

Loading Arm M Assembly

- Keeping the two triangles pointing at each other, install Loading Arm M Assembly so that its tooth with yet another triangle mark is in the position to align with Loading Gear A and the center of the shaft. See Fig. AL2.

This alignment can be done independently of any other alignment.

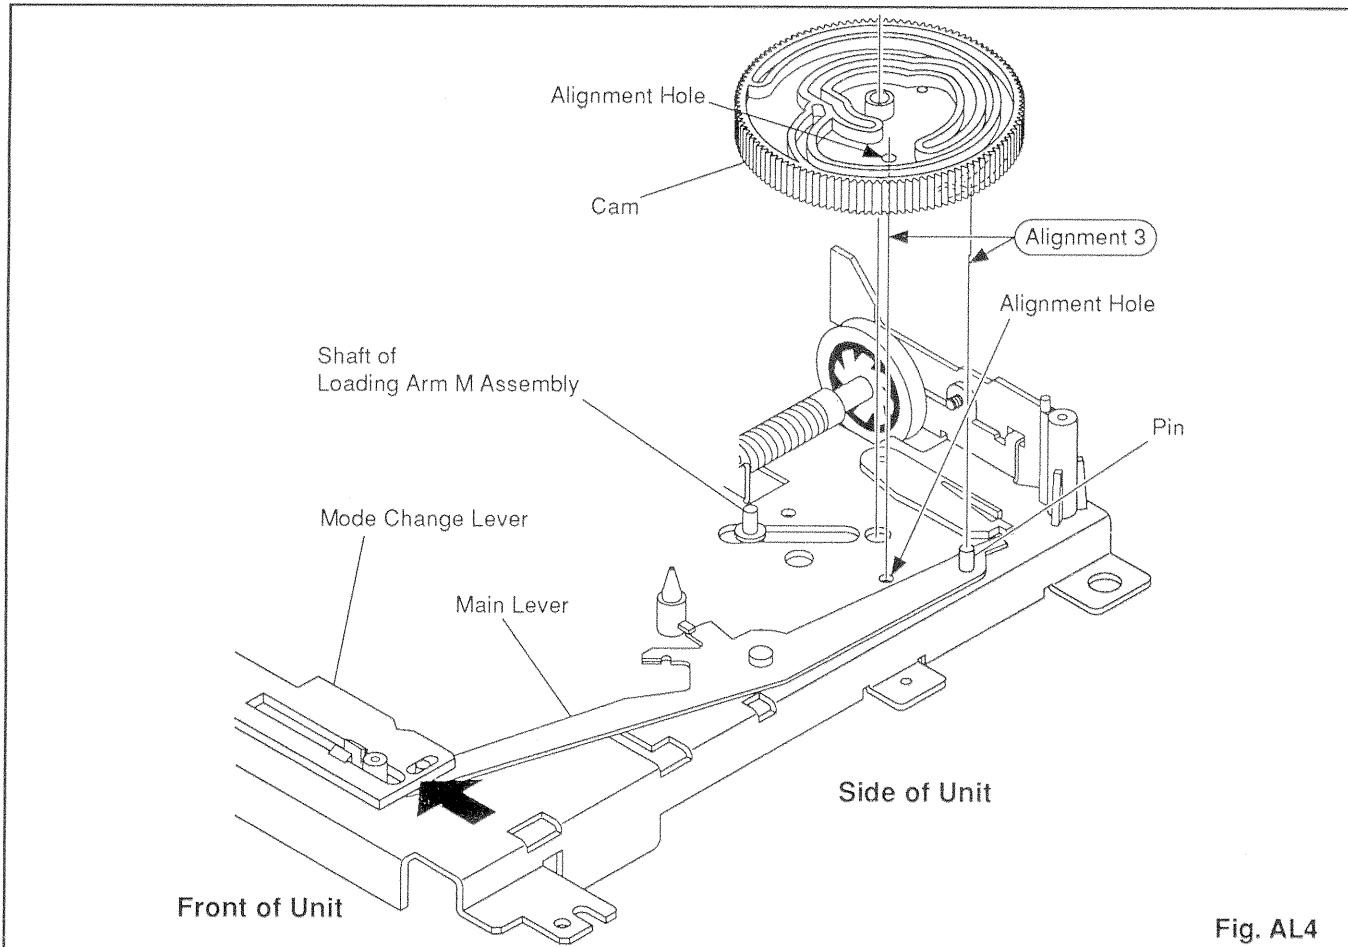

Fig. AL4

Alignment 3

Cam

1. Make sure that the mechanism is in Eject mode so that the shaft of Loading Arm M Assembly is in the position shown in Fig. AL4.
2. Align the alignment hole of the Cam with the alignment hole of the base, holding the Cam just above the base.
3. Carefully keeping these two holes aligned, install the Cam while pushing Mode Change Lever in the direction of the arrow. The Mode Change Lever must be pushed to make the pin on the Main Lever fit in the proper groove in the lower Cam.
4. After installing the Cam, make sure that the alignment hole of the Cam is still aligned with the base hole and that the pin on the Main Lever is inserted into the proper groove of the lower Cam as specified in Fig. AL4.

Alignment 4

Pinch Roller Arm Assembly

1. Ensure that the pin of the Pinch Roller Arm Assembly is positioned in the end of the groove of the upper Cam as shown in Fig. AL5.

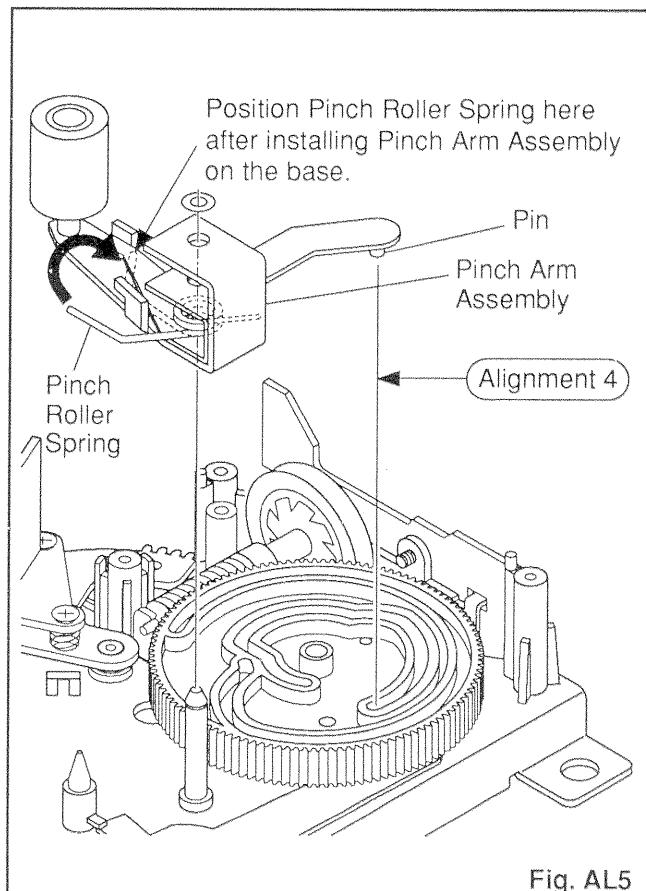

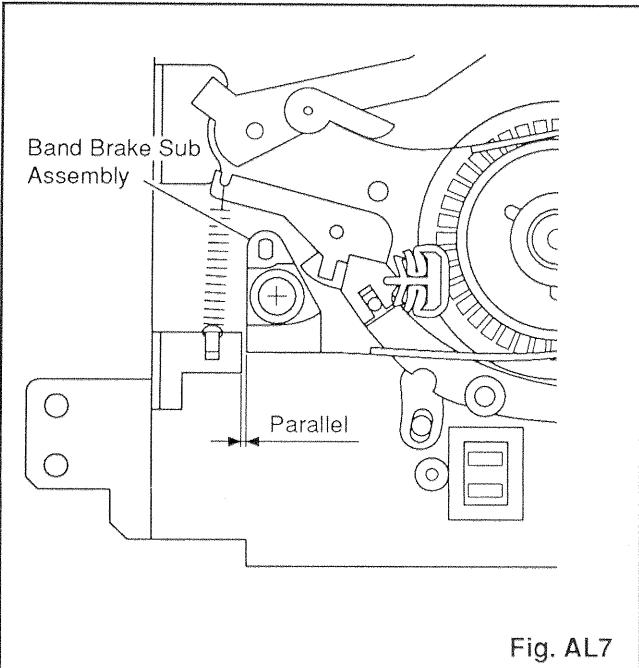

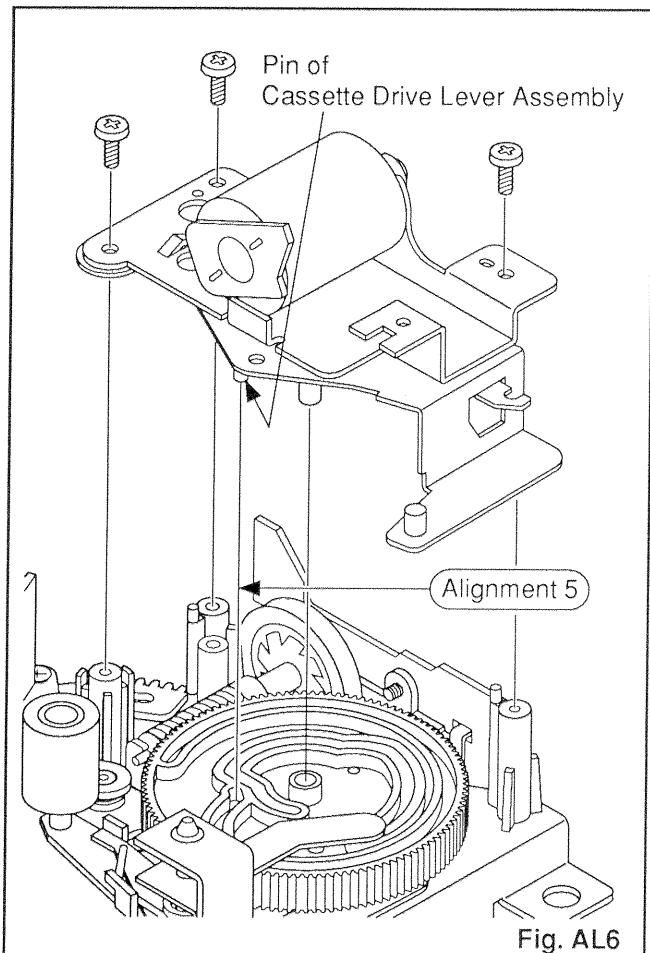

Fig. AL5

Alignment 5

Cassette Drive Lever Assembly

1. Ensure that the pin of the Cassette Drive Lever Assembly is positioned in the groove of the upper Cam as shown in Fig. AL6.

Alignment [b]

This alignment can be performed independently of any other alignment.

Band Brake Sub Assembly

1. Ensure that Band Brake Sub Assembly is positioned parallel to the chassis' notch as shown in Fig. AL7. This measurement can be made by eye.

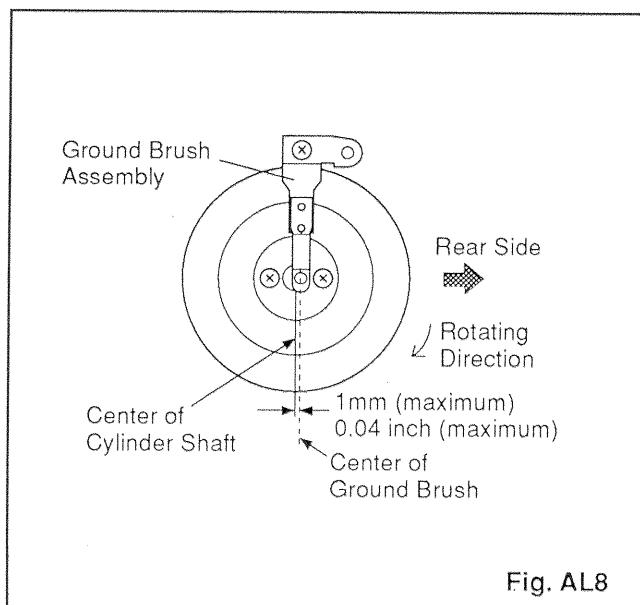

Alignment [c]

This alignment can be performed independently of any other alignment.

Ground Brush Assembly

1. Check to see if the Ground Brush Assembly is properly set in a position equal to or just less than 1mm (0.04 inch) (but never more than 1 mm or 0.04 inch), as measured from the center of the brush to the center of the Cylinder Shaft as shown in Fig. AL8.
2. If this measurement exceeds 1mm (0.04 inch), loosen and refasten the screw of the Ground Brush Assembly. If this is not enough and further adjustment is necessary, loosen and refasten the three screws of Cylinder Assembly. These three screws are shown in Fig. DM18 in DISASSEMBLY/ASSEMBLY PROCEDURES OF DECK MECHANISM.

Note: DO NOT install the Ground Brush Assembly in the opposite position (on the left side of the center of the Cylinder shaft), but always within a maximum of 1mm (0.04 inch) to the right side of the center of this shaft.

DECK ELECTRICAL PARTS LIST

PRODUCT SAFETY NOTE: Products marked with a **▲** have special characteristics important to safety. Before replacing any of these components, read carefully the product safety notice in this service manual. Don't degrade the safety of the product through improper servicing.

NOTE: Parts that not assigned part numbers (-----) are not available.

Tolerance of Capacitors and Resistors are noted with the following symbols.

| | | |
|--------------|-------------|----------------|
| C.....±0.25% | D.....±0.5% | F.....±1% |
| G.....±2% | J.....±5% | K.....±10% |
| M.....±20% | N.....±30% | Z.....+80/-20% |
