SPECIFICATIONS

Type	4 track, 2 channel Stereo Cassette Deck.
Tape speed	4.75 cm/s (1-7/8 ips)
Tape speed accuracy	± 1%
Motor type	
Capstan motor	DC servo motor
Reel motor	DC motor
Head material	
REC/PB head	M&X Hard permalloy (Combination type)
Erase head	Sendust & Ferrite
Wow and flutter (Playback)	0.04% Wrms
Fast forward/rewind times	85 sec. (C-60) type
SN ratio	
(400 Hz, 3% THD, Weighted, Metal tape)	
Dolby NR off	58 dB
Dolby B-type NR	66 dB
Dolby C-type NR	74 dB
Frequency response	
(±3dB, record level 160 pwb/mm-20dB)	
Normal tape	30 - 16,000 Hz
Special tape	30 - 18,000 Hz
Metal tape	30 - 19,000 Hz
Fe-Cr tape	30 - 18,000Hz
Erasure ratio (1kHz)	65 dB
Closstalk (1 kHz)	
Between channels	35 dB
Between tracks	65 dB
Harmonic distortion	
(400 Hz 160 pwb/mm)	1% (special tape)
Sensitivity/impedance	
Mic input	0.3 mV (2.2 k ohms)
Line input	70 mV (47 k ohms)
Output level	
Line output	700 mV (22 k ohms Load)
Headphones	2 mW (8 ohms Load)
Bias frequency	105 kHz
Power consumption	30 W
Dimensions (W x H x D)	470 x 135 x 296 mm (18-1/2 x 5-3/8 x 11-5/8")
Weight	7.6 kg (16.8 lbs)

Noise Reduction System manufactured under license from Dolby Laboratories Licensing Corporation.

'Dolby' and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.
Specifications of this unit are subject to change without notice for improvement.

FRONT PANEL TERMINOLOGY AND FUNCTIONS

1. POWER (Power switch)

2. EJECT (Eject button)

Press this button for opening the cassette holder.

3. PHONES (Headphone jack)

Be sure to use headphones with an impedance of 8 ~ 500 ohms.

4. CASSETTE HOLDER

Insert the cassette in this holder directing the side (A or B) you want to hear toward you with the tape side downward.

5. STOP (■ , Stop button)

Press this button to stop the tape.

6. REW (<< , Rewinding button)

By pressing this button, the tape rewinds at high speed.

7. PLAY (▶ , Playback button)

Press this button for playback or recording. (See Item 9)

8. FF (▶▶ , Fast forward winding button)

By pressing this button, the tape advances at high speed.

9. REC (● , Recording button)

For recording, press teh PLAY button while pressing this button. If a cassette is not loaded or either tab at the rear of the cassette is removed, the failsafe recording mechanism operates and recording will not proceed.

10.PAUSE (|| , Pause button)

Press this button to temporarily stop the tape during recording or playback. By pressing PLAY button, the pause mechanism is released and recording or playback will resume.

11. REC MUTE (Recording muting button)

By keeping this button pressed during recording, it is possible to produce a non-recorded portion of the tape as it causes recording signals to be cut off.

12. TIMER (Timer switch)

Using a commercial timer, you can automatically record or playback at a pre-set time.

13. REPEAT (Automatic repeat and memory repeat switch)

At the "auto" position of this switch, when the tape comes to the end in recording or playback, the tape will rewind automatically to the beginning and playback will start. At the "mem" position, if you set the tape counter to "000" by pushing the RESET button at the start of recording or playback, when you rewind the tape after recording or playback, the tape will stop at the position "000" on the tape counter and automatically restart playback.

14. BIAS TEST (Test signal switch and indicator)

If you press this switch to the "on" position during recording the built-in oscillator will be activated, the test signal will be recorded on the tape and the bias indicator will be illuminated.

15. TAPE SELECT

This switch selects the optimum bias current in recording and the equalizer characteristics in recording and playback according to the tape being used.

16. INPUT (Input Selector Switch)

This switch is for selecting MIC inputs on the front

17. DOLBY NR (Dolby noise reduction switch)

Set this switch to the DOLBY NR "B" position for recording with Dolby B-type NR. When the recording is made with Dolby NR "B", be sure to set this switch to the "B" position during playback. Set this switch to the DOLBY NR "C" position for recording with Dolby C-type NR. When the recording is made with Dolby NR "C", be sure to set this switch to the "C" position during playback. Similarly, when you record with this set to the "off" position, play the tape with the same switch setting. Dolby noise reduction system can reduce the tape hiss noise in recording and playback.

18. MPX FILTER (FM multiplex filter switch)

Set this switch to the "in" position for recording from FM stereo broadcasting with the Dolby noise reduction system.

19. OUTPUT (Output level control)

This control is for adjusting the levels of the output signals through the OUTPUT terminals on the rear panel and also through the PHONES jack.

20. MONITOR (Monitor switch)

In the "tape" position of this switch, the recorded signals on the tape can be monitored. In the "source" position, the input signals can be monitored.

21. MIC (Microphone inputs)

Live recording with two microphones can be made via these front panel microphone inputs.

For monaural recordings on both the right (R) and left (L) channels, insert the microphone plug into the left (L) channel only.

22. REC LEVEL (Recording level controls)

These controls are for adjusting the levels of the recording signals through the INPUT terminals on the rear panel and MIC inputs on the front panel.

23. PEAK LEVEL INDICATOR

These indicators show the peak levels of the input signals when recording as well as the reproduced signals during playback. The indication will be held at highest input level when the peak level exceeds -1 dB. The highest level will continue to be displayed for approx. 2 second, thereafter normal indication will resume. If a still higher peak is reached while a former peak is being held, the new higher peak will be indicated. As long as the peak level is less than -1 dB, the indication will not be held.

24. BIAS ADJ (Bias current adjusting knob and indicators)

Sliding this control adjusts the bias current to the recording head. If the right indicator is illuminated, slide to the left until only the center indicator is illuminated. If the left indicator is illuminated, slide to the right until only the center indicator is illuminated. The left (or right) indicator is illuminated when the high frequency range of the recorded signals is strong (or weak). The center indicator is illuminated when the high frequency range of the recorded signals is correct.

25. READ IN (Read in button)

Set the REPEAT switch to the "mem," position and press this button at the end of some musical source for the short repeat function. When pressing this button, the indexing figures of the tape counter will be memorized. When the tape reaches the memorized indexing figures in playback, the tape will automatically rewind.

26. TAPE COUNTER

At the start of recording, push the reset button to set the tape counter to "000". If you list the recorded programs and the indexing figures of the tape counter you can easily "cue" a program for playback.

27. READ OUT (Read out button)

When you want to check the memorized indexing figures of the tape counter, press this button.

28. RESET (Reset button)

By pressing this button, the tape counter will be set to "000".

DISASSEMBLY INSTRUCTIONS

PRECAUTIONS

- 1) Refer to the exploded views for disassembly of the DT-35.
- 2) Do not allow any lubricant to be deposited on the motor pulley, idler wheels, flywheel, pinch rollers, capstan belt, or reel rests. If lubricants does become deposited on any of these surfaces, thoroughly clean with alcohol.
- 3) After disassembling any mechanical parts, avoid allowing any dust or dirt to be deposited on the lubricated parts.
- 4) During reassembly, use only the original screws to prevent damage to the unit.
- 5) Use caution when handling the front panel or meters during disassembly and reassembly.
- 6) Put all small parts such as screws and knobs in a container as they are removed.
- 7) Many of the screws on the mechanism are secured with screw lock paint. To loosen these screws, apply a drop or two of solvent/thinner. Allow 2 or 3 minutes and the screws may be removed.
- 8) For assembly, reverse the order of the disassembly procedures to assemble the set properly.

Removal of Case

1. Removal of Top Cover

Remove the 4 screws shown in Fig. 1, and lift the top cover off.

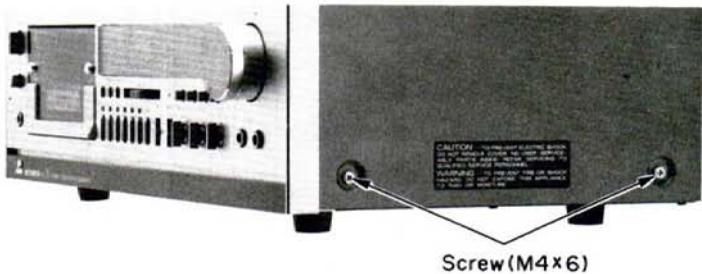

Fig. 1

2. Removal of Bottom Cover

Remove the 8 screws shown in Fig. 2.

- * In this condition, the Main P.C. Board can be accessed for maintenance and repair purposes.

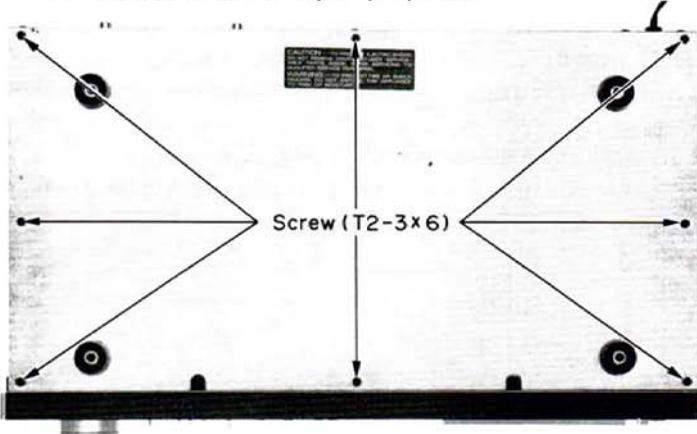

Fig. 2

3. Removal of Front Panel

- 1) Remove the top and bottom covers as described in procedures 1 and 2 above.
 - 2) Remove the cassette compartment door.
 - 3) Remove the knobs for the DOLBY NR and TAPE SELECT switches and OUTPUT and REC LEVEL.
 - 4) Remove 3 screws ① shown in Fig. 3.
 - 5) Remove 2 screws in Fig. 3.
 - 6) Remove the 2 screws ③ shown in Fig. 4.
- * In this condition, the Switch/Meter P.C. Board may be accessed for checking and parts replacement purposes.

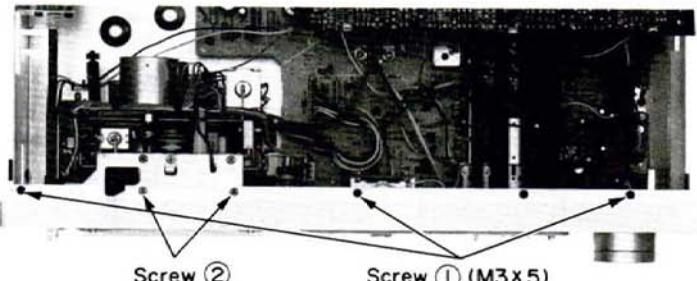

Fig. 3

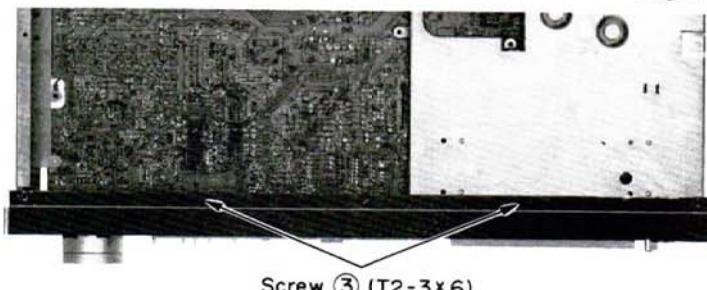

Fig. 4

Removal of Mechanism Section

1. Removal of Mechanism Assembly

- 1) Remove front panel as described in "Removal of Case" 1 through 3.
- 2) Remove the power switch button.
- 3) Remove connectors (J101, J305, J307) from the Main P.C. Board.
- 4) Take off the stoper and also the headphone jack shown in Fig. 5.
- 5) Remove the 6 screws shown in Fig. 5.
- 6) To remove the mechanism assembly, shift the mechanism backward by lifting its backside.

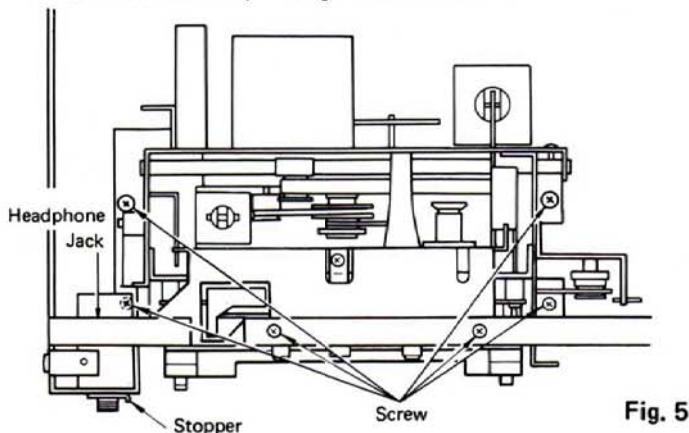

Fig. 5

2. Removal of Inter Connect P.C. Board

- 1) Remove the mechanism assembly as described in procedure 1 above. Remove screw ① shown in Fig. 6, and then remove the Inter Connect P.C. Board.
- 2) To remove the play solenoid, remove 2 screws ② shown in Fig. 6.
- 3) When mounting is required, refer to the "Mounting of Play Solenoid" on Page 8.

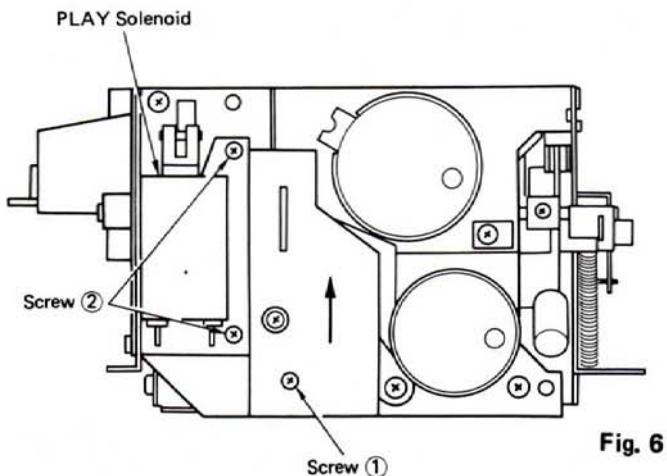

Fig. 6

3. Removal of Flywheel Holder and Flywheel

- 1) Remove the Inter connect P.C. Board and play solenoid as described in procedure 2 above, and then take off 2 springs at points A and B shown in Fig. 7.

2) To remove the flywheel, remove 2 screws ① shown in Fig. 7.

3) Take off the flywheel after disconnecting the main belt from the flywheel.

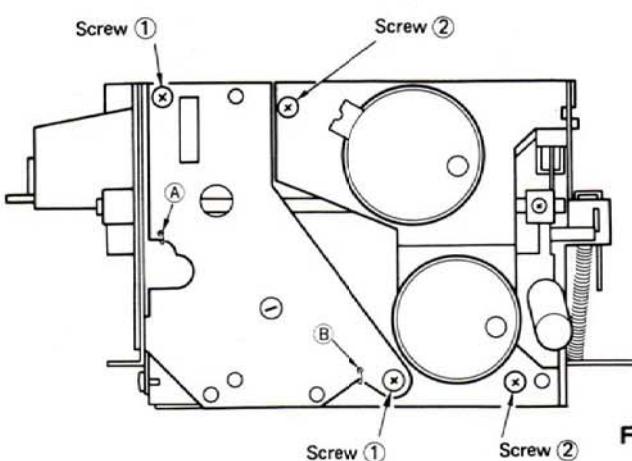

Fig. 7

4. Removal of Motor Holder

- 1) Remove the Inter Connect P.C. Board as described in Procedure 2 above, and then take off the capstan motor and reel motor belts.
- 2) To remove the motor holder, remove the 2 screws ② shown in Fig. 7.
- 3) In this condition, the FF/REW belt can be replaced.
- 4) When taking off the belts of the capstan motor and reel motor, remove the 2 screws securing the motors.

5. Removal of Make-up Plate and Counter Belt

- 1) Remove the mechanism assembly as described in procedure 1 above. To remove the cassette spring, remove screw ① shown in Fig. 8.
- 2) To remove the make-up plate, remove 2 screws ② shown in Fig. 8.
- 3) In this condition, the counter belt can be replaced.

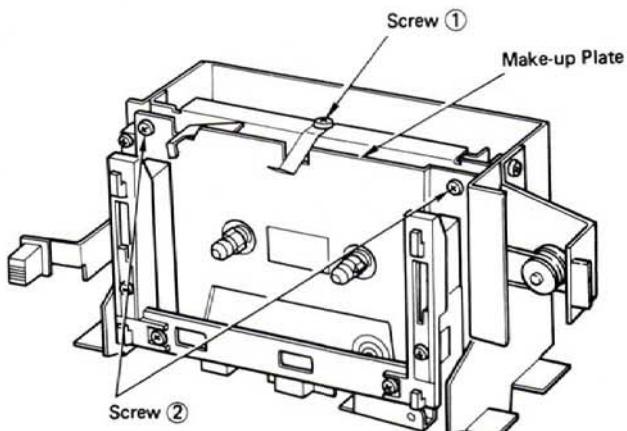

Fig. 8

6. Removal of Cassette Holder and FF/REW Solenoid

- 1) Following the procedures 1 through 5, remove the Inter-Connect P.C. Board, play solenoid, flywheel holder, motor holder, make-up plate and counter belt.
- 2) To remove the cassette holder lever, remove screw ① shown in Fig. 9.
- 3) To remove the plate (R) for maintenance of the mechanism base, remove 2 screws ② shown in Fig. 9.

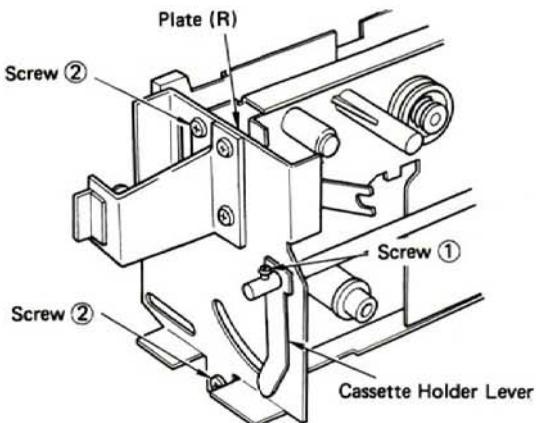

Fig. 9

- 7) To remove the FF/REW Solenoid, remove 2 screws shown in Fig. 12.

- 8) When mounting is required, refer to the "Mounting of Play Solenoid" on Page 8.

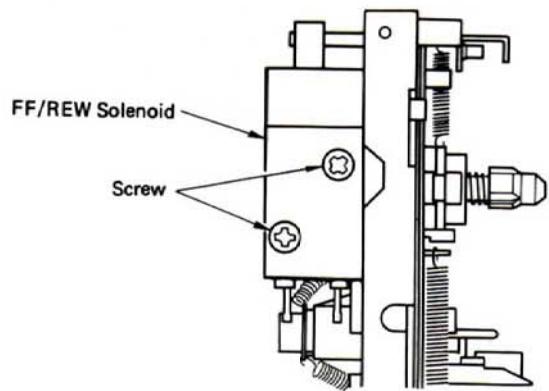

Fig. 12

- 4) Disconnect the spring from point A shown in Fig. 10.
- 5) To remove the cassette holder, remove the E-ring shown in Fig. 10.
- 6) Remove the 2 screws shown in Fig. 10 and turn the lever toward the arrow, then the plate (L) can be removed for maintenance on the mechanism base.

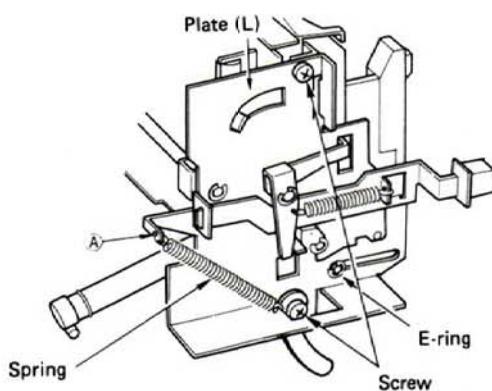

Fig. 10

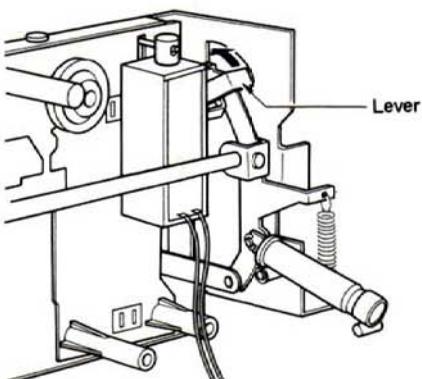

Fig. 11

MECHANICAL ADJUSTMENTS

1. Tape Speed Adjustment

- 1) Setting Connect a frequency counter to the output terminals.
- 2) Test tape MTT-111 (3kHz)
- 3) Adjustment Play the test tape, and use a small minushead screwdriver to adjust the capstan motor adjustment screw. The frequency counter should read $3,000 \pm 10$ Hz.

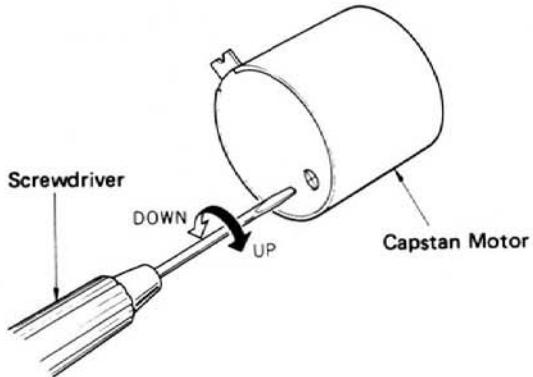

Fig. 13

2. Adjustment of Eraser Head

- 1) Install cassette tape (MC-10) with mirror attached, manipulate the solenoid used for head base absorption by hand and set conditions for playing.
- 2) Adjust the S screw so that tape can easily enter the eraser head tape guide and at the same time adjust so that the upper and lower intervals between tape and guide are of even dimension.

3. Adjustment of the Height of the Record/Play Head

- 1) Install cassette tape (MC-10) with mirror attached, manipulate the solenoid used for head base absorption by hand and set conditions for playing.
- 2) Set adjustment screws 1 ~ 3 for the Record/Play head so that the tape can easily enter the tape guide of the Record/Play head.
At the same time adjust so that the side of the head does not lean against the capstan and so that the upper and lower intervals between tape and tape guide are of even dimension.
- 3) Install test tape LCT-308M and set for play condition
 - a) Adjust screw No. 2 for maximum LR output.
 - b) Alternately adjust screw No. 1 and No. 3 for maximum mutual L and R output.
 - c) Adjust screw No. 2 for maximum mutual L and R output.

- d) Confirm that side of head does not lean against capstan.
- 4) Install test tape MTT-215C and set for play conditions.
 - a) Adjust screw No. 2 so that output of L and R at 10 Hz is at a maximum.
 - b) When the difference in output between L and R becomes greater than 1.5dB, readjustment from item (3) must be conducted.

- 5) Install the cassette tape with mirror attached in the input and set for play conditions.

- a) Confirm that there are no folds in the tape at the tape guide for the eraser head and for the Record/Play head. If there is a fold, make correction after adjusting the eraser head. Adjustment is completed when there are no folds apparent during running condition.

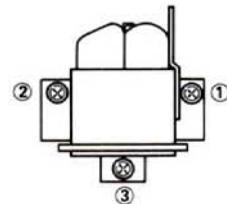

Fig. 14

4. FF/REW Solenoid (SOL-2) Mounting

- 1) After securing the solenoid temporarily, insert the plunger into the solenoid by hand and leave it in the pulled-in position.*
- 2) Then secure the solenoid tightly in a position which gives a gap of $0.8 \sim 1.2$ mm between the brake link and the $\phi 3.5$ boss of the intermediate pulley.

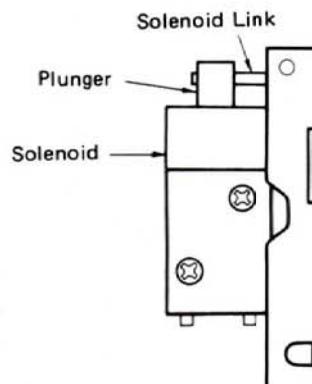

Fig. 15

* When inserting the plunger into the solenoid by hand, take care not to touch the solenoid link.

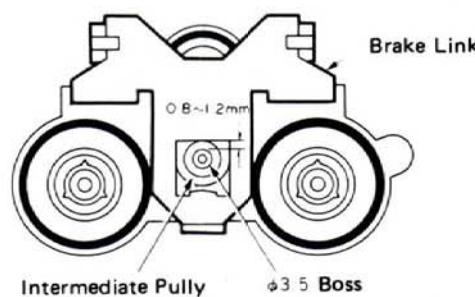

Fig. 16

5. PLAY Solenoid (SOL-1) Mounting

- 1) After securing the solenoid temporarily, insert the plunger into the solenoid by hand and leave it in the pulled-in position.*
- 2) After forcing the solenoid as far as it will go in the direction of the arrow in Fig. 17, secure the solenoid tightly, and check that the head base is in contact with the stopper (pinch roller shaft).

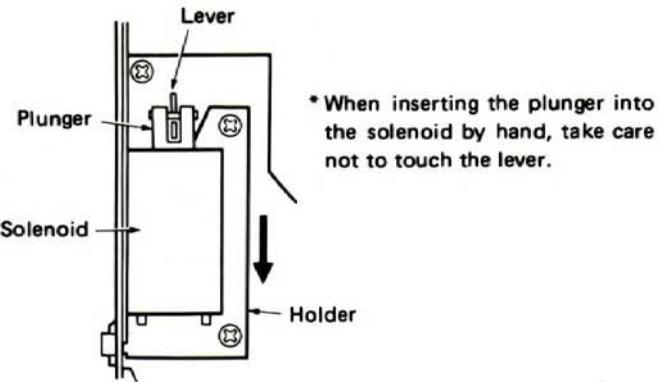

Fig. 17

6. Flywheel Thrust Play Adjustment

- 1) After mounting the holder in the mechanical section, adjust the flywheel thrust play to 0.1 ~ 0.3mm by the thrust play adjustment screw.

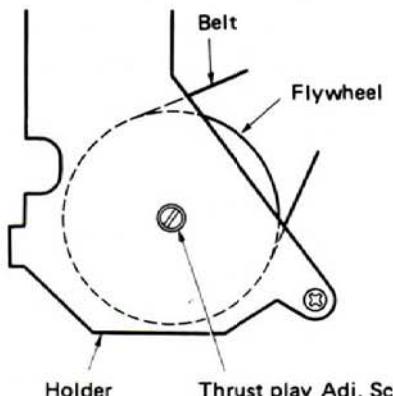

Fig. 18

ELECTRICAL ADJUSTMENTS

■ Measuring Equipment and Test Tapes

1. Audio generator : 20Hz ~ 20kHz
2. Attenuator : 0 ~ 90dB in 0.1 or 0.5 steps
3. AC voltmeter (VTVM) : 20Hz ~ 200kHz (min.), input impedance 100kΩ min. with measuring capacity below -60dB.
4. Frequency counter
5. Oscilloscope
6. Test tapes
 - MTT-111 (3kHz)
 - MTT-215C (10kHz/314Hz, -10dB, normal)
 - MTT-150 (400Hz Dolby level)
 - MCT-606SA (blank) High Bias Type
7. Measuring equipment connections

* Unless otherwise specified, connect the measuring equipment to the tape deck as shown in Fig. 19.

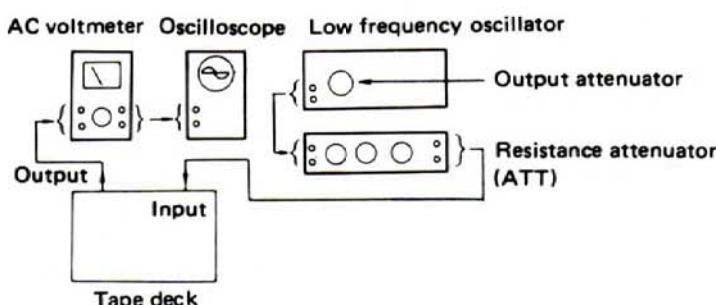

Fig. 19

- 1) Connect a 22kΩ load resistor, an AC voltmeter, and an oscilloscope to the output terminals of the tape deck.
- 2) During recording adjustments, also connect an audio generator and an attenuator to the tape deck input terminals.

Playback Adjustments

1. Playback Output Level Adjustment

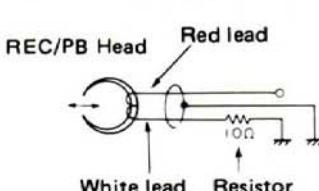

- 1) Test tape MTT-150 (Dolby level)
- 2) Adjusting point . . VR101 (L) and VR201 (R) semi-fixed resistors
- 3) Check point Negative side of Dolby P.C.B. TP2 (L) and Dolby P.C.B. TP2 (R)
- 4) Adjustment Play the test tape and adjust the semi-fixed resistors to obtain a reading of 775mV ±0.25 dB on the negative side of Dolby P.C.B. TP2 and Dolby P.C.B. TP2

2. Meter Level Adjustment

- 1) Test tape MTT-150 (Dolby level)
- 2) Adjusting point . . VR102 (L) and VR202 (R) semi-fixed resistors
- 3) Adjustment Play the test tape and adjust the semi-fixed resistors so that the 0 dB ±1 dB segments light up.

Recording Adjustments

For adjustments 1 through 4, connect a 100Ω resistor between the head terminal and the white lead leading to the REC/PB head.

* When recording, connect a 10Ω resistor between the minus (white) head lead and the head terminal.

Note: Connect the ground of the adjustment resistor to the P.C.B. ground line.

Fig. 20

1. Bias Frequency Adjustment

- 1) Setting Connect the frequency counter across both ends of the 10Ω resistor.
- 2) Adjusting point . . Bias OSC-UNIT
- 3) Adjustment Adjust T501 until the frequency counter reads 105 kHz.

- * For the subsequent adjustments, switch the tape selector to the Special position.
- * Performing the presetting operations 2 through 4 prior to the adjustment procedures will make the respective adjustments easier.

2. Bias Current Presetting

- 1) Setting Connect the AC voltmeter across both ends of the 10Ω resistor, and set the tape deck to "no-signal" recording mode.
- 2) Adjusting point . . Normal VR304 (L) and VR404 (R) semifixed.
Special VR305 (L) and VR405 (R) semifixed.
Metal VR306 (L) and VR406 (R) semifixed.
- 3) Adjustment Adjust each semifixed as follows.
Normal 7.5mV (750 μ A)
Special 9.0mV (900 μ A)
Metal 17.0mV(1,700 μ A)

3. Recording Current Presetting

- 1) Setting Set the deck to recording mode and apply a -10dB 400Hz input signal. After setting the front panel REC LEVEL controls to obtain a -7dB output at the output terminals.
Short the BIAS CUT terminals.
Connect the AC voltmeter across both ends of the 10Ω resistor.
- 2) Adjusting point . . VR303(L) and VR403(R) semi-fixed resistors.
- 3) Tape selector pos . . Special pos
- 4) Adjustment Adjust the semi-fixed resistors to obtain a reading of 1.0mV (100 μ A) on the AC voltmeter.

4. Peaking Presetting

- 1) Setting Set the deck to recording mode and apply a -10dB 400Hz input signal. Set the front panel REC LEVEL controls to obtain a -7dB output at the output terminals.

Short the BIAS CUT terminals, and drop the input level by 10 dB.

Connect the AC voltmeter across both ends of the 10Ω resistor.

- 2) Adjusting point . . Normal L304 (L) and L404 (R) coils.
Special L305 (L) and L405 (R) coils.
Metal L306 (L) and L406 (R) coils.
- 3) Adjustment Adjust each coil
Normal +15dB at 14KHz for 400Hz.
Special +13dB at 15KHz for 400Hz.
Metal +15dB at 18KHz for 400Hz.

5. Recording Current Adjustment

- 1) Setting Set the tape deck to recording mode and apply a -10dB 400Hz input signal. After adjusting the REC LEVEL controls to obtain a -7dB output, drop the input level by 30dB.
- 2) Test tape MCT-606SA or AC512 (blank) High Bias Type.
- 3) Tape select pos Special
- 4) Adjusting point . . VR303(L) and VR403(R) semi-fixed resistors.
- 5) Adjustment Record the 400Hz signal, and adjust the semi-fixed resistors so that the output level obtained during playback is the same as the recording monitoring output level.

6. Bias Current Adjustment

- 1) Setting Same as the setting for recording current adjustment above.
- 2) Test tape Normal MTT-501SP
Special MCT-606SA
Metal AC-711
- 3) Adjusting point . . Normal VR304 (L) and VR404 (R) semifixed resistors.
Special VR305 (L) and VR405 (R) semifixed resistors.
Metal VR306 (L) and VR406 (R) semifixed resistors.

4) Adjustment	Normal	within +0dB, +0.5dB at 6.3KHz level for 400Hz.	3) Adjusting point	Normal	VR304 (L) and VR404 (R) semifixed resistors.
	Special	within +0.25dB, -0.25 dB at 6.3KHz level for 400Hz.		Special	VR305 (L) and VR405 (R) semifixed resistors.
	Metal	within +0.25dB, -0.25 dB at 6.3KHz level for 400Hz.		Metal	VR306 (L) and VR406
		:Adjust each semifixed resistor as follows.	4) Adjustment		Record the 400Hz and 15kHz signals, and adjust the coils to obtain a level difference of within ±0.3 dB at 15kHz in respect to 400Hz during playback.

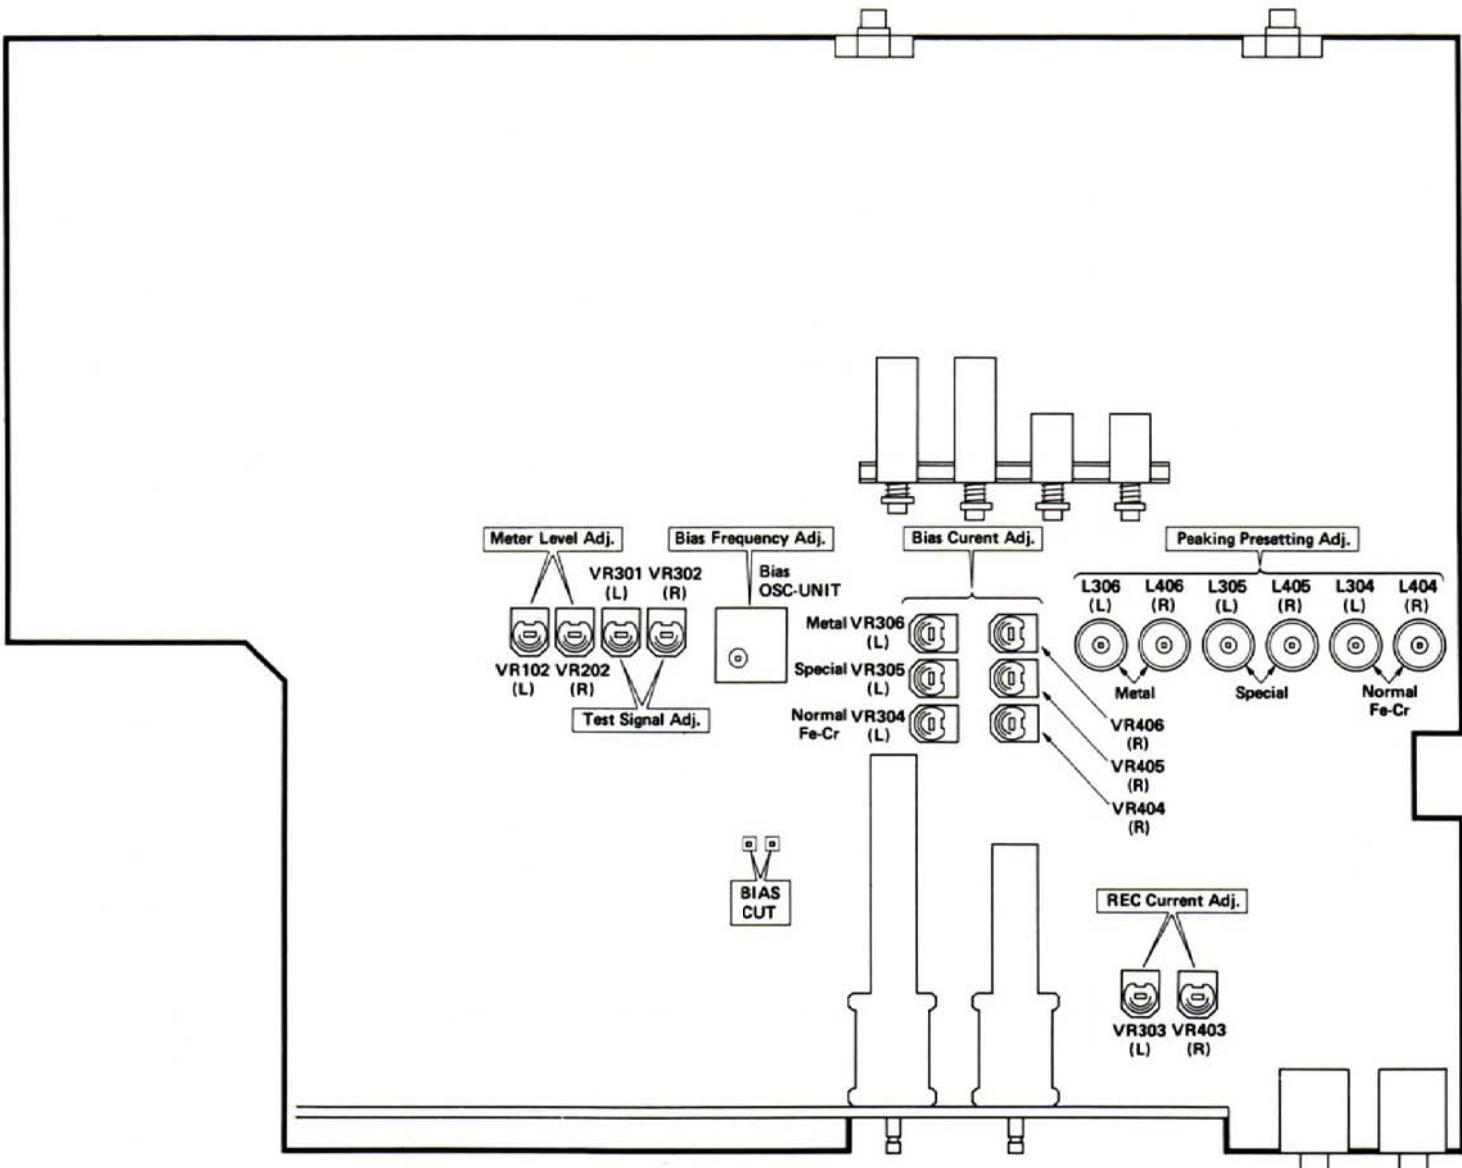

7. Peaking Adjustment

- 1) Setting Same as the setting for recording current adjustment above.
 2) Test tape Normal MTT-501SP
 Special MCT-606SA
 Metal AC-711

8. Adjustment method of test signal

With the TEST SW ON, adjust VR301 to obtain 4.9V across C124 and adjust VR302 to obtain 5.1V across C224. The adjusting range should be kept within ±0.05V. For the measurement, use the digital voltmeter.

ADJUSTING POINTS

DOLBY B-C Adjustment

1. Encoder Setting

Adjustment Procedure

- 1) Turn off the Dolby NR Switch
- 2) Impress the 700 Hz signal on the line input terminal and adjust the ATT so that the TP 1 terminal of the encoder is at 0.775V (0dBm).
- 3) Adjust semifixed volume VR502 (L) and VR602 (R) so that the output of the TP 2 terminal becomes 0.775V ±0.25dB.
- 4) Adjust the ATT so that the output of the TP 2 terminal becomes 23.5mV and at the same time note down the output of the encoder.
- 5) Adjust VR501 (L) and VR601 (R) so that encoder output becomes +11dB against 4 when the Dolby NR switch is changed to the "C" position.

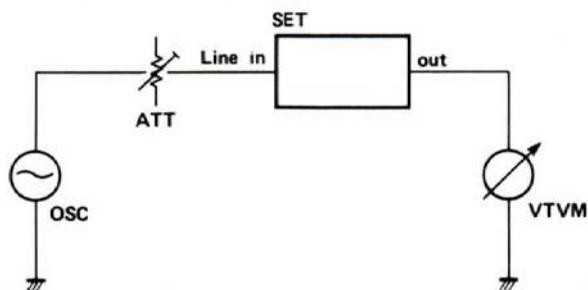

Fig. 21

2. Decoder Setting

Adjustment Procedure

- 1) Remove the decoder input terminal P102 from the main P.C.B.
- 2) Turn off the Dolby NR switch.
- 3) Impress the 700Hz signal on the Dolby NR P.C.B. terminal q (L) and Q (R), and adjust the ATT so that the output of TP 2 on the decoder side becomes 0.775V (0dBm).
- 4) Adjust semifixed volume VR701 (L) and VR801 (R) so that the output of terminal TP 1 becomes 0.775V.
- 5) Adjust the input ATT so that the output of terminal TP 1 becomes 83mV.
- 6) Adjust semifixed volume VR702 (L) and VR802 (R) so that the output of TP 1 becomes 23.5mV when the Dolby NR switch is turned to the "C" position.

Terminal Description

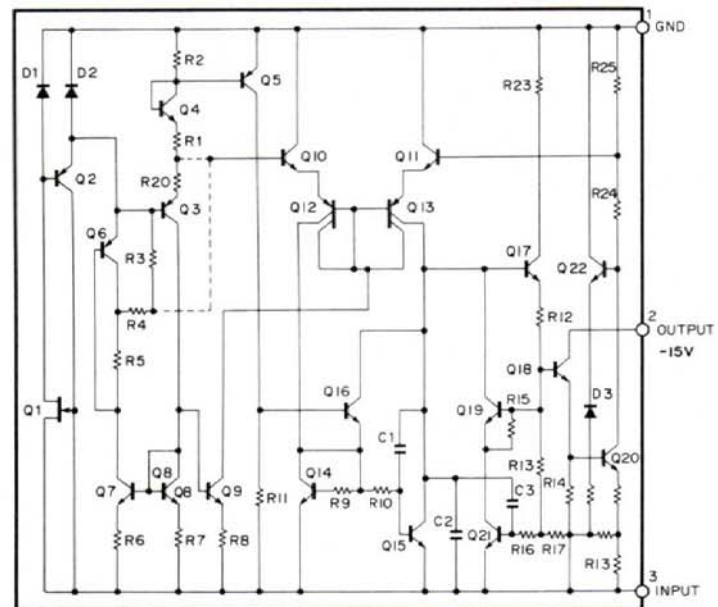

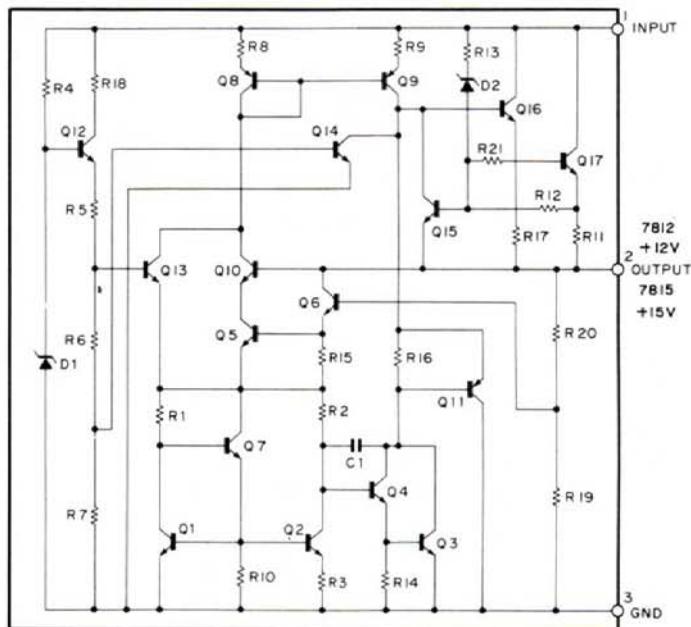

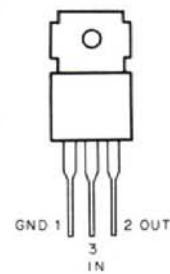

Terminal No.	Name	Function	
1	PAUSE/STOP	Operation input	Pause mode selected at "H" level, and stop mode selected at "L" level.
2	FF/PLAY		Fast forward mode selected at "H" level, and play mode selected at "L" level.
3	RE/REC		Rewind mode selected at "H" level, and recording mode selected at "L" level. The REC input is valid only when applied together with the PAUSE or STOP input.
4	TIMER START		Selection of the operation mode when the power is switched on. Play mode is selected if left at "H" level, recording mode if left at "L" level, and stop mode if left open.
5	AUTO	Control input	PLAY → REW, REW → PLAY or FF → STOP mode change instruction is generated by the application of an "L" level pulse (▲▲) to this input terminal.
6	ANTI REC		Recording inhibit input terminal. Recording is inhibited when an "L" level signal is applied.
7	T		External resistors and capacitors are connected to this terminal to from the oscillator circuit.
8	GND		Earth
9	MUTE OUT	Output	Muting signal output.
10	BRK OUT		Reel disk brake signal output.
11	MOTOR(F) OUT		Reel motor forward drive signal output.
12	MOTOR(R) OUT		Reel motor reverse drive signal output.
13	PLAY OUT		PLAY signal output.
14	PAUSE OUT		PAUSE signal output.
15	REC OUT		Recording signal output.
16	Vcc		Power supply.
